The period of more than two centuries (907-1145/1501-1732) from the advent of Shah Ismā`l I to the demise of the last Safavid rulers is marked by significant changes in Persian patronage, taste, and aesthetics and by the powerful role of political and religious ideology in shaping the arts. While royal patrons, like Tahmāsp I and Ẓābīs al-`Imām, who had long reigned in which to imprint their strong personal tastes on the arts, exerted great influence, there is abundant evidence documenting the increasing importance of sub-royal patronage and non-aristocratic patronage of the arts. As always, family ties were important in landing commissions and appointments at court, and in-termarriage among artists' families was extensive: the 10th/16th-century calligrapher Mubīb `Ali, for instance, was the son of the artist Muzaffar `Ali and the grand-nephew of Bihzād [q.v.]; and the cousin of the notable painter Mużaffar `Ali. Signed or reliably ascribed works of art and architecture became far more plentiful than in earlier times, as did overt displays of connoisseurship and proud references to impressive collections of precious books, not only illustrated manuscripts but also sumptuous albums (muraqqā). The awe and reverence that marked the later stages of the Il-Khanid and Tlmurid eras, and the visual arts that gives equal weight and propriety to painting and calligraphy: thus 'Ali b. Abī Tālib is credited with being the master of the two Islāms, the reed of the scribe and the brush of the painter, so that 'Ali, as the first Muslim painter, ranks in importance with the renowned Mānī, the legendary pre-Islamic Iranian painter. The centrality of 'Ali is likewise evident in the earliest buildings constructed under Safavid patronage and pervades the finest architectural inscriptions in Isfahān a century later: the state ideology that separated Shi`i Persia from rival Sunni regimes. The Safawid ideology that separated Shi`i Persia from rival Sunni regimes.

In addition to Shah Ismā`l's reign, Isfahān is little known: the two principal monuments are the 928-9/1521-2 Masjīd-i `Ali and the 918/1513 tomb of Hārūn-i Wilāyát, both in Isfahān's bazaar area and both reflecting in their names the strident adherence to `Ali characteristic of Ismā`l's reign. The tomb is justly celebrated for its portal, decorated in faience mosaic closer in style to the ornamentation of 9th/15th century Turcoman architec-ture of western Persia than to that of the
Timūrid east. Ismā'il’s exposure to Turcoman styles is also evident in a painting attributed to the painter Sultan Muhammad, *Stalking Buzdorm* defended from a lion by his horse *Rakhsh* (reproduced in S.C. Welch, *A King’s Book of Kings*, fig. 10), that most probably belonged to a *Shāh-nāma* begun and never completed for the first Safavid ruler. The heir apparent, Tāhmāsp Mirzá, appointed governor of Harāt in 922/1516, returned to Ṭabriz in 926/1516 at the age of nine, accompanied by the pre-eminent Timūrid painter, Bīhzād, who was particularly known for his royal *kiābān* (library and workshop). The convergence of the Turcoman and Timūrid artistic traditions during the first half of the 16th century is the essential element in the development of mature Safavid court styles in architecture and the arts.

**Tāhmāsp I.** Too young to rule effectively in 926/1516, the young shah turned his attention to the arts of the precious book and initiated the production of the greatest *Shāh-nāma* in Persian history. The *Shāh Tāhmāsbi Shāh-nāma* was a sumptuous creation, with 258 paintings, superb calligraphy and stunning illumination. The collaborative endeavour of dozens of different artists, it was successively under the direction of some Persia’s foremost talents, like Aḵā Mirak and Sultan Muhammad, and its paintings delineate the evolution of Safavid court style of Timurcoman and Timurid modes. Containing no colophon giving either the date of completion or the name of the scribe, the book occupied the talents of the royal atelier for some twenty years, and was complete when Dūst Muhammad wrote his *Account of past and present painters* in 953/1546. As one of the important contributors to the *Shāh-nāma*, this painter, calligrapher, and chronicler of the arts knew it well and specifically singled out for great praise the painting of *The Court of Gāmārda* by Sultan Muhammad (reproduced in Welch, *op. cit.*, 89). Other great projects of the shah’s patronage include the 946/1539-43 *Khamsa* of Nizāmī now in the British Library. In keeping with the Timūrid princely tradition, the shah’s brothers Bahram and Sām were also keenly interested in this most exclusive of court arts. The depiction of murals in illustrations of architectural interiors, as well as scenes involving examples in both landscape and street life, that wall paintings also an important activity for painters, and this tradition continued for the rest of the Safavid era. In 955/1548 the shah removed the seat of government from Ṭabriz to Kāzvin. He came increasingly to favour orthodoxy, and his passion for the arts of the secular book waned, though a 959/1552 *Kūrān*, almost certainly created for Tāhmāsp, indicates that calligraphers and illuminators of the highest ability were still employed in the royal *kiābān* (reproduced in T. Falk, *ed.*, Treasures of Islam, 100-1). Many of his artists left the court in search of other patronage: some went to work for princes in provincial posts, like the shah’s gifted nephew Ḩabīb (the patron of the great 963-72/1556-65 *Haft awrang* of Džamī now in the Freer Gallery), while others, like Mir Sayyid ʿAll, moved further east to Moghul India, where they were instrumental in shaping the style and taste of the Mughal court. See also Tāhmāsp I.

**ʿAbbās I.** Following a decade of instability after Tāhmāsp I’s death in 1576, ʿAbbās I brought great energy to his 42-year reign. Like his predecessors, he initiated a great *Shāh-nāma* project that re-established a large and productive royal atelier, and he took an active interest in the arts of the book. He particularly favoured the painters Šādžik Bek and Rīdā ʿAbbāsī [q.v.], supported the rival calligraphers ʿAlī Rīdā ʿAbbāzī and Mir Šīmām, and even mediated disputes within the royal *kiābān*. The dispersal of artistic talent during ʿAbbās’ reign and the broader diffusion of a wealth from ʿAbbās’s economic reforms increased the numbers of patrons from the lesser aristocracy, official and military classes, professionals, and merchants. Many of these new patrons appear to have bought, rather than commissioned, works of art, so that the production of less expensive single-page drawings and paintings flourished. Virtuoos demonstrations more than collaborative endeavours, and they took their subject matter from a variety of sources: images drawn from contemporary and mundane society that are often humorous or even sharply satirical (PL. XLV); elegant couriers, sometimes identified by name; virtuous lovers and Rīdā’s fashion-plate youths (PL. XLVI), often accompanied by mystical verses, who presumably correspond to the divine beloved. Safavid metalwork was also frequently adorned with mystical poetry that indicates how deeply and thoroughly Sufism suffused the culture (PL. XLVII).

But the shah also recognized the importance of the arts in promoting the economic well-being of Persia. Some carpet manufacturing under royal patronage was profitably directed at commissions from European nobility (PL. XVIII), and the role of textiles in commerce, always significant in Islam’s past, seems to have been especially enhanced. Safavid silk textiles demonstrated a dizzying variety of styles and they depended on a remarkable extent upon figural decoration; some royal painters worked as textile designers, and silk cloths were decorated with scenes of Safavid victories over invertebrate enemies like the Uzbeks, as well as with visiting Europeans, youthful lovers, and the beauties of gardens and nature (PL. XLIX). Likewise, he encouraged ceramic production, and in addition to more traditional lustre wares, Persian potters imitated Chinese blue-and-white ceramics for sale to European merchants in the China trade as well as to satisfy the substantial demand in Persia (PL. L). Persian manuscripts and single-page works of art were even bought by merchants for sale outside Persia.

Foreign contacts and international trade were vital elements in ʿAbbās’s policy, and the many new patrons from the European and Indian diplomats and merchants who came to Persia, there were European scholars, missionaries, and independent travellers whom the shah’s interests generally extended more broadly. They remained an important feature of Persian cultural and social life throughout the 17th/17th century, and their published reports not only stimulated cultural and social life throughout the 11th/17th century, and their published reports not only stimulated contemporary interest in Persia but also serve as major sources of information for modern scholarship. Their attention was particular drawn to the city of Ispahan [q.v.], which ʿAbbās chose as his centre of government in 1006/1598 and where he undertook one of the greatest building programs in Islamic history. Blessed with year-round water from the Zayandeh River, the city appeared to visitors like a green forest accentuated by brilliant tiled domes. To the south across the river the shah established the community of New Džulf (q.v. in Suppl.) for Christian Armenians who provided most of the multilingual merchants involved in Persia’s international commerce, and their richly decorated extant churches are a striking synthesis of 17th-century Persian and European art and architecture.

In order to promote safe commercial travel within Persia, ʿAbbās ordered the construction of dozens of *džâns* [q.v.] or caravanserais. Most of them also served as or were connected with bazaars, and they are
among the most impressive examples of Safavid ar-
chitecture. The Kaysariyya bazaar in Isfahan is the
best preserved and connected the city's old ġāmī with ʿAbbās's new city centre, a large rectangular
primary area. The Kaysariyya's entrance occupies the
north end of the new maydān; 300 m distant at the
end is the entrance to the Masdjid-i Imām, a
brilliant construction on the classic four-īwān plan
completed in 1637. Both buildings dominate their
respective sides and suggest the preoccupation with
large size, showy opulence, glistening surfaces, and
dramatic effects that are major components of the
Safavid aesthetic: the maydān itself was an open area
for military parades, commerce, music, acrobatics,
and other kinds of entertainment. Less dominant are
the adjoining buildings—the single-domed Shaykh
Luṭf Allah mosque on the east side and, opposite it
across the maydān, the ʿAlī Kāpū or High Gate
entrance to the şāh's gardens and Ǧīhil Sūṭūn
that extend to the west. While the Shaykh Luṭf Allah
mosque's dome is decorated in traditional faience
mosaic, the decorative programme of the Masdjid-i
Imām is laid out in large glazed tiles, a technique
demanding precise knowledge of the reaction of clays
and glazes to firing; especially those tiles were
curved to cover the surface of domes and minars.
Extensive use of this type of tile decoration must have re-
quired the employment of gifted potters and painters,
and may partly account for the apparent decline in the
 sophistication of more traditional ceramics in the
Safavid period. Both mosques were provided with
splendid inscriptions designed by ʿAlī Rīdā Tabrizī
that cite passages from both Kūrā and Ḥadīth and
mayddān, underscoring and supporting the Safawids' descent
from ʿAlī and their special role as protectors of Ṣ̣hī'ī
Islam in Persia. To the same end, ʿAbbās also made
lavish gifts of carpets and ceramics to the dynastic
shrine of Shaykh Saʿīd in Ardabil.
The second level of the ʿAlī Kāpū is dominated by
its projecting šāhār, a colonnaded verandah more
usually associated with far more private dwellings,
where it followed an inner court, enclosed by the arc-
cades on all four sides and subject to the patriarch's
focussed glance and discipline. The king could also
ritually present himself to those assembled in the
maydān below. It is an architectural simile for the in-
creased power of the central administration and of the
şāh as both autocrat and head of the Șafaʿiyya Stūfī
order. To the west, running roughly parallel to the
maydān, was the čāhār bāgh, an avenue and watercourse
lined by the mansions and gardens of the wealthy
and supplied by an elaborate hydraulic system with
water from the river. While this part of Isfahan
must have been a veritable garden city for the rich,
its natural imagery does not seem to have permeated
the imagery of painting, for the garden, which had served
as the setting for the many earlier illustrated scenes from Persian literature became a relatively
infrequent backdrop in paintings by Isfahan's artists.

Later Safavid art and architecture. In the century after
Ṣhāh ʿAbbās I, ceramics and sumptuous textiles con-
tinued to be important sources of revenue and were
admired items of luxury trade in Europe and India.
Traditional literary themes in the arts of the book
were in part supplanted by often incisive depictions of
actual, ordinary, and even outlandish individuals, of
exotic persons from other lands, of implicit and occa-
sionally fairly explicit eroticism, of carefully-observed
nature (Pl. LII), and of actual events and formal por-
traits. Although the European technology of printing
was ignored and traditional calligraphy continued to
flourish in the hands of masters like Muḥammad Riḍā
(Pl. LIII), the impact of European prints and the in-
fluence of European modes of representation increas-
ed, notably in the work of Muḥammad Zamān (Pl.
LIV), and traditional styles began to take on a more
international guise, while European travel accounts
accorded Isfahan a reputation rivalling that of Istan-
bul, Dhihīl, and Ǧagrā. Although there were no subse-
quent urban projects as grandiose as the maydān, ar-
chitecture and the arts evinced similar aesthetic and
cultural concerns. ʿAbbās II undertook major
building and restoration programs at the Shrine of the
Imām Riḍā in Mashḥad [q. v.], and during the reign
of Sultan Ḥusayn I an impressive madrasa and adjoin-
ing ġāmī were built on the čāhār bāgh in design and style
making obeisance to the Masdjid-i Imām.

1302-1587, Paris 1959, and Les peintures des manuscrits de Shah ʿAbbās à la fin des Safavides, Paris 1964,
are basic sources for painting. A major
primary source for arts of the book is Kādžī Amjad,
Calligraphers and painters, 1962, and some of the
few studies of a calligrapher is M. Bayānī, Mir Ḥossein,
Tehran 1951. The same author's Kādžī
Niǔhsien, Tehran 1966, contains invaluable
information about the works and careers of Safavid calli-
graphers. (A. Welch)

VI. Numismatics.
The Safawid coinage was introduced following the
victories of Ṣhāh Ismāʿīl I over the Ak Koyunlu
Turken in 907-8/1502, and continued without break
until the deposition of Shâh ʿAbbâs III by Nâdir Shâh in 1148/1736. All the rulers, except for the ephemeral Sultan Hanuza who administered the state in 994/1586, struck coinage in their own names, and one, even struck it in two, first in that of Šâfi II and then, after his re-enthronement, as Sulaymân. After Nâdir Shâh’s death in 1160/1747 coins were also occasional- ly issued in the names of Šafawid pretenders who claimed paternal, maternal or even entirely fictive royal descent until the death of the last claimant in 1200/1786. The examination of these coins, however, properly forms part of the later monetary history of Persia.

During the period of Šafawid rule, the Persian currency system was based on the tumân, a unit of account whose value was fixed at the currently-established weight of 10,000 silver dinârs. The weight of the tumân was customarily expressed as a fixed number of mithkâls or nukhuds of refined silver which could then be converted into coin with the value of 10,000 dinârs. One mîthkâl, weighing approximately 4.60 gr, was equal to 24 nukhuds which each weighed about 0.192 gr.

Table 1 shows the extent of the Šafawid silver coinage, giving the name of the ruler, the weight(s) of the tumân in nukhuds during his period of rule, and the names of the various silver coins, their individual values in dinars and their theoretical weight in grams. It should be noted that weight standards were not always uniform and that local variations existed, particularly in the Caspian region and the eastern provinces. The heaviest coin was usually the most popular and most commonly struck. Under Ismâ’il I the principal coin was the shâhi valued at 50 dinârs, 200 per tumân. Then under Tahmâsb I came the double shâhi, or 100 dinârs, 100 per tumân, which during the rule of Muhammad Khvâdâbânda was renamed the muhammadi. ʿAbbâs I introduced the four shâhîs, 200 dinârs, 50 per tumân, which he named the ṣabbâsî. The ṣabbâsî remained the normal Persian denomination for the remainder of the dynasty and for a time afterwards, except for a brief period between 1123 and 1129 under Shâh Sultan Husayn when it was supplanted by the oblong-shaped five shâhî (the ḥusaynî?). It should be noted that coins valued above five shâhîs were produced especially for the ruler to distribute during the Nawruz [q.v.] celebrations, and these usually quickly found their way to the jewellers for conversion into personal ornaments.

Table 2 summarises the Šafawid gold coinage. Gold played a much smaller rôle in the Persian currency system than did silver or copper. Indeed, in the century before the accession of Shâh Ismâ’il I the Timûrids had struck no gold at all in their Persian realms. The Ak Saynûnî, who succeeded the Timûrids in the west, introduced the striking of the gold agrafrî in Ṭabriz during the last quarter of the 9th/15th century as a trade coin. In its weight, ca. 3.45 gr, duly mellow fabric and epigraphy, it was copied so exactly on the Burjûs Mamlûk agrafrî popularised by al-Ashraf Barsbây that the name of the ruler in the legends often has to be read in order to distinguish one currency from another. The earliest gold coin of Ismâ’il I was a coinage of the Kûshûlatûn type. Mamlûk agrafrî in both weight and design, but it was not long before the Persian artistic tradition reasserted itself as evidence of Ismâ’il’s determination to stage a Persian religious and cultural revival. Quite excep- tionally in Islam, the Šafawids struck both their gold and silver coins from the same dies, and as none of them bore any mark of denomination it would have been easy for counterfeiters to gold-plate silver and pass it off on the unwary had gold been in regular circulation. Contemporary travellers to Persia recorded that local gold was very rarely seen and little used in commerce.

Although all the gold coins were popularly called agrafrî, there were actually several different varieties to which this name was given, which were distin- guished from one another by their weights rather than by their designs or legends. Ismâ’il used two standards for his gold coinage—one based on the weight of the traditional Islamic mîthkâl or coinage dinár of 24 nukhuds (approximately 4.60 gr), and the other, the true agrafrî, with its origin in the weight of the Venetian gold ducat, weighing 18 nukhuds (approximately 3.45 gr). The latter was theoretically exchangeable at par with European ducats, the Mamlûk agrafrî and the Ottoman sultanî. Halves and quarters were struck in both standards, and the latter became popular in eastern Persia where its use was linked to the quarter agrafrî issued by the Mughal rulers in the Badakh- shân region of Afghanistan.

Under the Šafawids all gold coins were treated as a commodity with no fixed price against the silver tumân. Their purchasing power fluctuated according to supply and demand, type of commodity, season of the year and the perceived reliability of the original iss- uing agent. Traders always preferred Venetian ducats, and generally held the Šafawid coinage in low esteem. In the 11th/17th century, local gold coinage virtually vanished from the Middle East and Persia. Because both regions preferred silver to gold, the price of silver was relatively higher throughout these areas than it was in Europe, where gold was favoured. This gave European traders a perfect opportunity to import inexpensive silver from the New World which they sold locally for gold at great profit to themselves. In time, so much gold was siphoned out of Persia that it was said that the only gold coins to be struck by Šâfi I, ʿAbbâs II and Sulaymân were those that the rulers presented to their courtiers at the Nawruz celebra- tions. Thus the custom arose of striking gold at the weight of the popular silver denominations, the ʿabbâsî, muhammadi and shâhi, and giving them a nominal value in dinârs ten times that of their silver originals. These large pieces, as well as the five dinârs, ten-mîthkâls and ten-agrafrîs modelled on the multiple ducats of Venice and the Holy Roman Em- pire, were pièces de plaisir, and were usually incor- porated into jewellery as a sign of royal favour.

Copper coinage played a central rôle in the local economy of Šafawid Persia. While gold and silver were struck under royal license, copper fulûs were issued by the provincial governors. To avoid infringing upon the royal prerogative, the coins they struck did not bear the governors’ names, but included easily-recognised figures of objects, often animals, birds or even humans on one face and the name of the mint and year of striking on the other. This made the fulûs easy to identify, which was important because it was the custom to recall the copper coinage not only annually but whenever the incumbent was replaced by a new appointee. The coinage was then recalled, restruck and resold at the people at a price which was said to yield a 50% profit on the value of the issue. To make this system feasible, only locally-struck copper coin was permitted to circulate, and only coins of the current governor and year were accepted at full value. Fulûs were occasionally given denominational names; for example yek or dî dinâr were valued at one or two dinârs, kaz or kaftâk at five dinârs and tanga at ten dinârs. Because the lifespan of copper was so short, very little care was taken in its manufacture, and

*ʿAlli wali Allāh with or without the names of the Twelve Imāms: ʿAllī, Ḥasan, Husayn, ʿAllī, Muḥammad, Dīyaʾ, Mūsā, ʿAlī, Muḥammad, ʿAlī, Ḥasan and Muḥammad. The names of the Twelve Imāms were first employed by the Ilkhan ruler ʿOldjeytu between 709 and 716 on his two Shīʿī coin types, and they then reappeared 200 years later when Shāh Ismāʾīl made Twelver Shīʿism the state faith of Persia. During his brief reign, Shāh Ismāʾīl II used a poetic distich in place of the kalima in order to prevent the holy words from falling into the hands of unbelievers. The religious legends were usually inscribed in naskhī script. The reverse legends usually contain the name of the ruler, the mint names and the years of striking. The ruler’s name usually lacks his patronymic, the exceptions being Ismāʾīl II and Muḥammad Khudābānda, who give that of their father b. Tahmāsb. Their titles are of two kinds, those that define the ruler’s relationship to the people he ruled and those that define his relationship to the Shīʿī faith. The former are in Arabic, usually inscribed in naskhī script, and are more or less elaborate depending on the number of words which could be fitted on a die, e.g. al-Sultān al-ʿAdil, al-Kāmil, al-Ḥādi, al-Wāli, al-Qāzī al-Ṣahīḥ Allāh Abū ʾl-Muzaffar, Shāh... Bahādur Khān, al-Safawi al-Husaynī, khāliṣa Allāh taʿāla tukahā wa-sulānāhu. This form was used by Ismāʾīl I, Tahmāsb I, Ismāʾīl II, Muḥammad Khudābānda, ʿAbbās I and Husayn. Husayn also used al-Sultān b. al-Sultān al-Khākān b. al-Khākān, al-Safawi al-Husaynī refers to Shāykh Ṣafī al-

Din Ardabili [q.v.], the ancestor of the dynasty, who claimed descent from the third Imam Husayn b. 'Ali. This ancestral claim parallels that of the contemporary Hasani Sharifs of Morocco, who were using al-Hasani and al-Mawla in their own titles. Perhaps both dynasties emphasised their illustrious descent in order to embarrass the Ottomans, who had no claim to such prestigious ancestry.

The legends which proclaim the ruler's Shii allegiance are in Persian. The better known of these are Chulum-i Imam Muhdi 'alayhi al-salam and Chulum-i 'Ali b. Ali Taib 'alayhi al-salam used by Tahmâb I and Muhammad Khudâbânda; Band-e-yi Shah-i Wilidây used by 'Abbâs I, 'Abbâs II, Sa'di-11-Salâymân and Husayn, and Chulum-i Shah-i Din used by Tahmâb II. Poetical distichs in Persian incorporating the name of the ruler within their texts were employed by 'Abbâs I, Sa'di I, 'Abbâs II, Sa'di 11-Salâymân, Husayn, Tâhmeb II and 'Abbâs III. At the end of Safawid power, when Tâhmeb Kuli Khân, the later Nâdir Sha^h [q.v.], controlled Tâhmeb II and 'Abbâs III, anonymous distichs were also inscribed in the name of the eighth Imam, 'Ali b. Mûsâ al-Ri'da. Such distichs were also used by the Zands and early Kadjars, who avoided placing their own names on the coinage while a Safawid pretender still existed. These secular legends are usually inscribed in nasta'liq, the script in which poetry was usually written.

State control over the monetary system was exercised by the Mu'azzar-al-Mamâlik, the State Assayer, who reported directly to the ruler. Under him were the local chief assayers and dârâbî bâghi, masters of the mint, who were jointly responsible for ensuring that the gold and silver were of the right alloy and that the manufacture of the blank flans and their striking into coin proceeded according to the regulations in force. The management of the mint was farmed out to local concessionaires who were responsible for collecting and remitting the seignorage, wâdîqâbî, charged for refining metal, manufacturing gold and silver thread for weaving carpets and luxury cloth, and for striking coins. The raw metal was delivered to the mints in the form of bullion and foreign or obsolete coins. Seignorage varied widely from 2% to 20% of the metal value based on what local commercial and political circumstances could bear.

Under the Safawids, the main state mints were located in Isfahân and Tâbâriz, whenever the latter was not under Ottoman control. Other main urban centres that witnessed more or less continual minting activity were Hamadân, Kâshân, Kazvin, Shâriz and Yazd, as well as those in the main shrine towns of Ar-âbil and Mashhad. The ports of Rasht in the north and Huwâyzâ in the south were chiefly concerned with restriking foreign coin as it entered the Safawid dominions, while the almost continuous wars were financed by the Urdu (army) mint as well as those located in the north-western fortress towns of Eriwân, Gandja, Nahcbâwân, Shâmâshâ and Tîflis, whenever these were not held by the Ottomans. Besides these towns, both Ismâ'îl I and Tâhmeb I operated many local mints which varied greatly in their importance and in their production of coin. Initially they served to reinforce the ruler's authority throughout the country and to spread the observance of the Twelver Shi'i doctrines to areas where they may have been only lightly observed before the Safawid conquests. However, like the Ottomans, the Safawids found that a large number of small and remote mints gave only a marginal return to the state treasury and were often wide open to local manipulation and malpractice. Thus during the economic hardships and inflation of the 11th/17th century most of them were closed down unless a locally powerful governor could maintain their existence either as a matter of local prestige or to meet exceptional local needs.

Although Safawid coins have survived in large numbers, no systematic effort has been made to study them within their political and economic contexts. They are usually treated, quite correctly, as the first section of the modern coinage of the Shâhs of Persia. The standard works on the Safawid coinage need to be updated because of the many discoveries that have been made since they were published.

(R. Darley-Doran)

SAFDÂR DJANG, Mirzâ Muhammad Mu'âkim Safdâr Djang ('the Lion in War') (1708-54) the second Nawâwâr or ruler of the North Indian post-Mughal successor state of Awâdhd [q.v.] (Eng. Oudh) from 1739 until his death fifteen years later. Nephew, son-in-law, and successor to Sa'dad Khân Bûrân al-Mulk, and like him an immigrant to India from Nîshâpûr, he expanded his territory in the Gangetic valley while retaining as much influence as possible within the declining Mughal Empire. This was an era of political fragmentation, regional state formation, and massive cultural revival that together helped form modern South Asian identity, but the post-Mughal aristocracy still sought to restore the Empire, and Safdâr Djang was very prominent in the struggle.

The Nîzâm of Haydarâbâd, ruler of a larger successor state in the south, and Wâzir or deputy to the Mughal Emperor, wrote on his deathbed in 1748 to Safdâr Djang, 'You are now the most promising of our current youth. Take that office [Imperial Wâzir] upon yourself, and exert yourself in recovering the affairs of the Empire.' Safdâr Djang fought in a civil war in and around Dihîl in 1735 over the control of imperial offices, by then virtually powerless but inextricably invested with the necessary authority throughout India. This civil war marks the final breakaway of Awâdhd from the imperial system in India.

Although his reign marks the emergence of Awâdhd as an autonomous successor state in the mid-Gangetic plains, his tomb, a splendid example of late Mughal architecture, stands in what is now New Delhi.

SAFF (A.), pl. saff, literally "rank, row or line, company of men standing in a rank, row or line" (Lane, 1693 col. 3), a term with various usages.

1. In religious practice. Here, saff is used for the lines of worshippers assembled in the mosque or elsewhere for the prescribed worship; see on this, Salât.

2. In military organisation. In the traditional formation of armies on the march or on the battlefield (ta'biya), there was a classic five-fold division of a centre, its left and right wings, a vanguard and a

rearguard (whence the term šamāṣ for an army). In actual battle, such as the engagements of the Arabs with the imperial Sāsānid army in ʻIrāq in the 630s, the Arab armies line up in a jufāf or ranks. The Prophet is said to have straightened, with an arrow held in his hand, the jufāf of the Muslims before the battle of Badr [q. v.] in 2/624 ( Ibn ʻAlī, Sīra, 443-4, tr. Guillaume, 300; al-ʻTabarī, i, 1319, tr. M. V. McDonald and W. M. Watt, The History of al-ʻTabarī, VII. The foundations of the community, Albany 1987, 53-4), and the Kurānic verse LXI, 4, “God loves those who stand in ranks, as though they were a well-built, well-compounded town,” is quoted in support of the saff formation. Only in the later Umayyad period does the use come in of troops concentrated into small, compact blocks (kardūs, kurdūs, kardūs), but the saff formation continued after this as a standard deployment.

(C. E. Bosworth)

3. In North African social organisation. Here, saff denotes in certain parts of the Maghrib, chiefly Algeria, Southern Tunisia and Libya, a league, alliance, faction or party. In Morocco, the term left [q. v.] is used with the same meaning throughout. As such saff is vocalised with a damma instead of fatha (cf. Dozy, Suppl., i, 834). French spellings vary from sof to sof and saff (pl. isof).

The term refers to a major form of rural sedentary and transhumant Berber and nomadic Arab political organisation, viz. a diffuse system of two (or more) mutually opposing or rivalling leagues, often of uncertain origin, dividing villages or desert towns kṣār (sing. kṣār), clans and families, or comprising whole tribes. Parallels have been looked for in classical Greece (R. Montagne), archaic Rome (E. Masqueray), Albania and Corsica (J. Despois, L’Afrique du Nord, Paris 1949, 145) and in mediaeval Italy (e.g. Guelpes and Ghibelines). As a rule, neighbouring tribal units belonged to opposite alliances but a neighbour-but-one belonged to one’s own alliance. The obligation of mutual assistance between league members was strict and might include cash, provisions, arms, volunteer labour, fighting, shelter and providing for a family whose head was killed in feud or battle. The stronger the solidarity of a given league, the less would an opposing neighbour feel tempted to attack or trespass on his neighbour lest he activate the entire league. Causes of conflict were never lacking at every tribal level, the most common being land, water, trees, grazing, pastures, livestock, harvests, women, honour or a personal vendetta.

In Greater Kabylia, where this phenomenon was first observed by Europeans (Devaux, Hanoteau and Letourneux, Masqueray, see Bibl.), the basic political unit was the village. Divided into two moieties, its cohesion was due to its political organs: the village assembly (gāmāsa), its executive officer (amin) and the customary law (kānūn). Its complex saff-system, despite its dualistic and antagonistic character, managed, by some “strange and obscure process” (P. Bourdieu, Sociologie de l’Algérie rurale, 1970, 205), to maintain an overall equilibrium. Until the end of the 18th century, the whole of Greater Kabylia was divided in two great leagues named the “upper” and the “lower” leagues (saff ufele, saff bū ḍadda). These were territorial, not personal alliances, and their disposition on the ground resembled that of a chequerboard—a pattern already apparent in the saff map given by Devaux, 40, and later encountered in Morocco (Montagne 1930). By the end of the 19th century, this system was “overlaid” by four major alliances: Ait Iraïen (comprising 12 tribes), Zwān (10 tribes), Ait Illilen (6 tribes) and Ait Diennad (7 tribes).

Further south, the Berber-speaking Shāwīya of the Awarṣ massif [q. v.] who lived in villages and hamlets like the Kabyles but were more dispersed and largely semi-nomadic, also retained, though more sketchily, their political organisation and saff spirit; almost all groups rallied round the two great tribes, Awlād Dāwūd and Awlād Ayyāb (Suppl., i, 834). Of a more personal type were the saffs of several Arab “feudal” families in the Constantinois, such as the clans of Bū ʻUkkāz and Ben Gānā.

Still further south, in the Ibrādī confederation of the Mzāḇ [q. v.], despite the unity of its heterodox creed and religious leadership (ḥakat al-aẓẓāba), each of the seven walled settlements (kṣār) had its own secular assembly (gāmāṣat al-ʻawwām), often conflicting in interests and saffs both within the kṣār and between the kṣār. Here, too, causes for friction and conflict, sometimes sanguinary, were not lacking: first comes water shortage (after Ghardāya, the capital, had dammed off the wādī Mizāb for her own use), creating endless disputes with the towns Milka and al-ˁAfī. Ghardāya itself, in times of crisis, split in two hostile camps: Eastern (saff ḥarbi), led by Awlād b. Sulaymān and allied with the kṣār Bni Egen, and Western (saff gharbi), led by Awlād ʿAmān ʻĪsā and in league with Milka. Even its Jewish quarter (malldha [q. v.]) became infected by the saff spirit; in 1893 it split in two parties, Sullam and Balouka, when the later erected a separate synagogue. Other towns and oases in the High Plains and northern fringes of the Sahara so divided were Wargla (Warglān), where in addition to neighbourhood rivalries there was fierce enmity between it and nearby Ngusa since the end of the 14th century, when the latter concluded a defence pact with the nomadic Arab tribe of Saḥīf ʿUrba (Hilāl), posing as defenders of the Sunna against the largely Ibrādī Warglis (Lethielleux, Ouargla, Paris 1983, 173), and Laghouat (al-Aghwāt), where the two rivalling quarters—each with its own mosque and market—used to fight each other, but always outside the town, and on an appointed day. They, too, had their Arab nomad helpers, the Tarbaa (al-Arbaṭa) confederation.

As a case sui generis can be seen the important maraboutic tribe of Awlād Șīlī Shayḥ based on their zāwīya El Abiod, where Sharākā and Gharābā quarrelled over transfer of baraka and control of their alms, raiding in the process each other’s flocks and involving in their rivalry the Turkish and Moroccan authorities. In 1838, Si Hamza, leader of the Sharākā, rallied round the amīr ʻAbd al-Kādir [q. v.], but when their relations soured, Si Shayḥ, leader of the Gharābā, became ʻAbd al-Kādir’s staunchest supporter. With the latter’s defeat, Si Shayḥ was interned in Morocco, while Si Hamza rose from underdog to victor: he was appointed CLUDīf over the Sahara by the French. Even the oasis group of Tawāt [q. v.] (Touat) used to be divided into two opposing factions, the Yahlīn and Sufyān. These, too, they still celebrate annually their zāwīya separately. The same goes for their “capital”, the oasis of Tamenrit, divided in two opposing factions, the Mrabīṭ and Dāreb (K. Suter, Étude sur le Touat, in Rev. Geogr. alpine, 1952/7, 449-50).

Tunisia, too, had its share in saff formations. Traditionally, there existed two rivalling leagues in the south, with ramifications in the north, in Eastern
Algeria and Tripolitania, named Shaddād and Yūsuf. The suggestion that these names reflect the opposition between Berbers and Arabs has been refuted by A. Martel (see Bibli.). Possibly they go back to the rivalries between the Hilāl and Sulaymīn [q.v.], who invaded the Maghrib in the 11th century and occupied there two distinct domains: the former, that of the West or Black Tents, the latter, that of the East or White Tents, with the partition line running along the meridian of Tripoli. Yet in the 13th century, the latter were encouraged by the Hāfīids to expand into Tunisia and push out the Buʾayydrūn [q.v.] (Constan-tiopolis) and the Zāb, names given by the Ben Gāna. Tuggurt, Larbaʾa and Hanāṅa were zealously supported by the saff Yūsuf, while the Būʾ Ukkārī, Trūd, Ṣāḥānba, Tamāsīn and al-ʾWād (El Oued) were supported by the saff Shaddād. In the east, the same leagues divided politically a number of tribes in the Fazzān and Greater Syrte (Martel, Caunelle, see Bibli.). Major issues on which they adopted opposite stances were: the Ottoman conquest, rule of the pashas, the "national" beys, the revolt of All Pasha against his uncle Husayn, founder of the Husaynī dynasty, and the ensuing troubles (1729-56), which divided the tribes of the High and Low Steppes, as well as towns and villages in the coastal plain (Ṣāhīl), into two saffs, the "Husaynīyya" and Bāšīhiyya (Despois, see Bibli.). In the south, the former were supported by saff Yūsuf, the latter by Shaddād. Saffīfe dynamics, as illustrated above, form one possible perspective on the structure and functioning of tribal society in North Africa and one way of explaining, how order, stability and cohesion are maintained in a stateless society, where central authority is lacking or ineffective. Another perspective and explanation is provided by the so-called "nesting" theory, which uses the concept of "nesting" and "balanced opposition" of tribal segments at the same level of segmentation along the genealogical tree. This theory, to which the names of E. Durkheim, E.E. Evans-Pritchard, E. Gellner and D.M. Hart are chiefly attached, and which seems to dominate the field of social anthropology in North Africa today, falls outside the scope of this article.

AL-SAFFĀF [see Arab ‘L-ABBAS].

SAFFARIDS, a dynasty of mediaeval eastern Persia which ruled 247-393/861-1003 in the province of Šidjestān or Sīstān [q.v.], the region which now straddles the border between Iran and Afghanistan. The dynasty derived its name from the profession of coppersmith (saffār, ṭijjar) of Yaʿkūb b. al-Layth, founder of the dynasty. Sīstān, on the far eastern periphery of the caliphal lands, had begun to slip away from direct Abbāsid rule at the end of the 8th century, when Khurāsān and Sīstān were caught up in the great Khurāsānībebr.tuff, led by Hamza b. Adharak (d. 213/828 [q.v.]), which took advantage of such factors as resentment against caliphal tax actions. Thereafter, the khūba was maintained in the capital of Sīstān, Zarand or Zarang, for the ʿAbbāsids; the caliphal governors of Khurāsān in [q.v.]. In this period, charged with the task of re-establishing the position in Khurāsān after Hārūn’s death, but were really able to collect revenue outside Zarang itself, and the surrounding countryside of Sīstān remained dominated by the Khurāsānīs. In this period of waning caliphal power in Sīstān, the orthodox elements in the towns there and in the town of Bust [q.v.] to the west, which depended administratively on Sīstān, were thrown back on their own resources. Hence they organised their own local units from its anti-Kharīdīte ṣayra bands. Displaying immediately leadership qualities, he was soon able to set aside the ṣayrāy chiefs Sāhīb b. al-ʿNadr and Dirham b. Naṣr and assume power over Sīstān for himself (247/861). He then extended his authority eastwards into al-Rukhkhaṣ and Zamindāwar [q.v.] (in the east of modern Afghanistan), killing the local ruler there, the Zanbil, in 251/865, and then penetrating into Šabotulān [q.v.], the district around Ghazna and Gardiz [q.v.], and the Kābul-Bāmīyān region, where they ruled the Kābul-Šāhāns. He drew an extensive bounty and slaves from these areas, and probably in some part paved the way for the gradual Islamisation in the next century of these fringes of the Indian cultural and religious world. The Tāhirīd city of Harāt was attacked in 257/870-1, and Yaʿkūb’s operations in the Baḵtrī [q.v.] region also led to the submission of the Tāhirīd to the rule of the Khaftānīs, the leadership of whom entered the Saffārīd service and formed a special contingent within the army, the so-called Dāyī al-Šāhān. Yaʿkūb now turned his attention to the much richer and more attractive lands to the west of Sīstān, and this is the course meant more clashes with the representatives of caliphal power in such provinces as Khurāsān, Kirmān, Fārs and Khūzistān. Kirmān was invaded in the early 250/865, so that the caliph was compelled to acknowledge Yaʿkūb as governor there; and raids were made southwards into Mārkān, the southern part of what is now Balūcistān, and westwards from Kirmān into Fārs, an especially rich province the loss of whose revenues was a serious blow to the ʿAbbāsids. In 259/873 Yaʿkūb invaded Khurāsān, entered Nīshāpūr without striking a blow and ended the rule there of the Tāhirīd governors, afterwards pressing into the country from its anti-Kharīdīte position in the local Iranian princes there but without achieving any permanent successes there. The caliph could not ignore the overthrow of his Tāhirīd nominees, and al-Ḥuṣayn denounced publicly the unlawfulness of Yaʿkūb’s annexations. Yaʿkūb’s riposte was to march from Khūzistān into Irāq, but near Dayr al-ʿAḵūl [q.v.] on the Tigris, only 50 miles from Baghdad, he

8. Abū Djaʿfar Ahmad
9. Khalaf

was defeated by caliphal forces (9 Radjab 262/8 April 876). Even so, he recovered Khūzistān and retained control of Fārs till his death three years later; Fārs remained thus, subtracted from 'Abbāsid control and under the rule of the Saffarids or of their commandery, until the time of the fifth Saffārid amīr, Muḥammad b. 'Ali b. al-Layth (298/910-11), when it was briefly recovered by the 'Abbāsids, only to pass irrevocably from their hands into those of the Būyids or Buwayhids [q.v.] a quarter of a century later; we possess today more coins minted by the early Saffarids in Fārs than from any other part of their empire. Yaʿkūb's brother 'Amr [q.v.] succeeded to the command of the army, after a short trial of strength with his other brother 'Ali, when the founder of Saffarid fortunes died at Djudjāshābūr in Shawwāl 265/June 879. Whilst tenaciously holding on to the Saffarid conquests in Fārs and Khūzistān, ʿAmr in general adopted a somewhat more conciliatory policy towards the caliphate, at various times seeking formal investiture with the governorships of his various provinces; one effect of this new attitude was that the Regent al-Muwaṣfāk [q.v.] was now better able to concentrate on the suppression of the Zandī [q.v.] rebellion in Lower 'Irāk and southern Khūzistān. Enjoying as he did—if only intermittently—some degree of caliphal approval, ʿAmr embarked on a protracted struggle to establish his authority in Khurāsān which, after Yaʿkūb's capture of Nīghāpūr, had reverted to being controlled by various adventurers, former commandery of the Tāhirids (some of whom claimed to be aiming at restoring the Tāhirids, but all were in the long run forwarding their own personal interests), such as Ahmad b. ʿAbd Allāh al-Khudjistānī [see Khudjistan] and Rāfī [q.v.]; [hathama]. 'Amr also continued his brother's policy of raiding into eastern Afghanistān towards the Indian borders at some point before 283/896, when rich presents of idols captured by him reached the caliph in Baghdaḍ. Rāfī was not finally subdued until 283/896, when ʿAmr was able to send his head to al-Muʿtaḍid. His prestige was now at its apogee, and the caliph invested him with all his existing territories, including now Khurāsān and Rayy. But ʿAmr's overweening pride now led him to claim, since he was legitimate governor of Khurāsān, suzerainty also in Transoxania, over the local dynasty there of the Samanids [q.v.], a pretension to which al-Muʿtaḍid assented. ʿAmr marched into Tūkharistān to assert these rights, but was defeated by Ismāʿīl b. Ahmad (Rābīʿ I or II 287/March-May 900), who eventually sent him captive to Baghdaḍ, where he was killed just after al-Muʿtaḍid's own death in 289/902. With ʿAmr's capture, the vast military empire which the two brothers had built up began to shrink somewhat. Khurāsān passed to the Samanids, and became an integral part of their dominions for nearly a century. But ʿAmr's successors and their Turkish commander Sebūk-erī managed to hold on to Fārs and Kirmān, as well as the heartland of Sistān itself, for another decade or so; suzerainty was exercised over the local rulers in Makrān, the Maʿdānids [see Makran], and for a while, it seems, across the Gulf of Oman in ʿUmān. The Saffārid amirate was thus still far from negligible. ʿAmr was succeeded in Zarang by his grandson Tāhir b. Muḥammad b. ʿAmr, who ruled in effect jointly with his brother Yaʿkūb, but there was a faction in Sistān which favoured the claims of the sons of ʿAli b. al-Layth, partly because ʿAli had been Yaʿkūb b. al-Layth's original choice as successor but had been elbowed aside by ʿAmr (see above). Al-Layth b. ʿAli prevailed militarily in 296/909, but had to face the continuing insubordination of Sebūk-erī, who controlled Fārs and who in 297/910 defeated and dispossessed from Sistān al-Layth. The latter's
brother Muhammad was hailed as amir in Zarang (298/910), but at this point the caliph al-Muqtadir invested the Samanid Ahmad b. Isma’il with the governorship of Sistan and instructed him to end the rule of the Saffarids for good. A Samanid invasion followed, with Zarang captured in Radjab 298/March 911, and Muhammad and his brother al-Mu’addal, who had also briefly held power in Zarang, were both captured and deported to Baghdad.

This marks the end of the first line of the Saffarids, what might be termed the Laythids, sc. descendants of al-Layth, father of the four brothers. Ya’kub and Qays had both been supported by a professional army of the type increasingly the norm in the central and eastern Islamic lands at this time. There was a nucleus of slave ghulams [q. v.], comprising essentially Turks from the Central Asian steppes and Indians, plus troops of many other nations attracted by the prospects of plunder under the capable leadership of the two Saffarid brothers. As a result of their conquests, the brothers amassed a full treasury, from which tribute was sent only intermittently, in the intervals of calm relations, to Baghdad. In fact, Ya’kub especially was contemptuous of the ʿAbbāsids and of the aristocratic Arab political and social tradition which they and their governors like the Tāhirids represented and which had hitherto prevailed in the caliphal lands. As a self-made man of unpretentious background, he was concerned above all to promote his own family’s interests and to cut loose his native province Sistan from financial and other dependence on the ʿAbbāsids and their rapacious governors. Ya’kub and ʿAmr therefore represent a new trend in the history of the Islamic lands at this time: a conscious repudiation of the “caliphal fiction” whereby all provincial rulers theoretically derived their authority from an act of delegation by the head of Sunni Islam, and in this wise the constituting of their military empire marks a definite step in the decline of direct caliphal political authority and the corresponding rise of autonomous and later de facto independent provincial dynasties. It might also be noted that there formed round them, in later decades, a popular tradition in Sistan which regarded them as upholders of the province’s interests against predatory outsiders, a feeling that was to be a distinct factor in the failure of the Samanids permanently to establish the authority of a single Sistan and the return of a parallel branch of the family to power (see below).

The twelve or thirteen years 298-311/911-23 form an interim during which the Samanids led two expeditions into Sistan and during which what might be described as patriotic, perhaps even proto-nationalistic, reactions against them by the people of Sistan took place. In the course of rebellion against the Samanids, a child great-grandson of ʿAmr b. al-Layth, Abū Hāšām ʿAmr, was briefly raised to the throne (299-300/912-13) as a figure-head, but real power rested in the hands of several local commanders, such as Muhammad b. Hurmuz, called Mawla Ṣanḍali, Kaḏir b. Ahmad and Ahmad b. Kudam. Disturbed conditions in Sistan also allowed the local ṣayyids to play a significant role during these years, and it was these ṣayyids of Zarang who in 311/922-3 brought to power Abū Djafar Ahmad b. Muhammad b. Khalaf, whose grandfather al-Layth (not identical with the al-Layth who was father of Ya’kub and ʿAmr) had been a distant kinsman and associate of the two original Saffārīd brothers and whose father’s wife had been a grand-daughter of ʿAmr’s. Abū Djafar thus inaugurates the second and last line of the Saffārīds, which may conveniently be styled the Khalafs, and he ruled for some 40 years (311-52/923-63). Abū Djafar soon extended Saﬀārīd authority to Bust and into al-Rukhkhadj, and made Sistan once more a force in the politics of the eastern Islamic world, with its amir enjoying the prestige of an equal with that of the Samanids and without, it appears (e.g. on the evidence of coins) any sign of subordination to Bukhara.

There seems to have been a growth of factionalism and internal opposition during the later part of Abū Djafar’s reign, leading to his murder by one of his Turkish ghulams in Rakh’ā 352/March 963. He was succeeded by his son Abū Ahmad Khalaf (352-963), last and most famous of the amirs of this second line. Khalaf at first ruled in close partnership with a commander of Sistan, Abū ʿI-Husayn Tāhir b. Muhammad, who had Saffārīd blood in his veins on his mother’s side, making Tāhir his regent when he departed for the pilgrimage. The not unpredictable result of this arrangement was that, when Khalaf returned to Sistan in 358/960, Tāhir was unwilling to send any military help from the Samanids to assert his claims, when Tāhir conveniently died in 359/970 and Khalaf could re-enter Zarang as amir. The struggle was nevertheless carried on by Tāhir’s son Husayn, who, in turn secured Samanid aid, this time against Khalaf. A period of civil warfare followed, with Husayn generally supported by the Samanids and with Khalaf, so the sources imply, consequently refusing to send any tribute to Bukhara. Only after 373/983, when Husayn had been defeated and then died, was Khalaf’s power firmly established, so that he was able to send expeditions into Kirmān to collect taxation there.

Meanwhile, a new power had arisen in eastern Afghanistan, that of Sebūkṭīgīn [q. v.] in Ghazna, the founder of Ghaznavid [q. v.] power there, who had in 367/977-8 occupied Bust and who in the 990s was asserting his power in Khorāsān also against the decaying Samanid authority. Khalaf tried to incite the Karakhanids of Transoxania [see Ilek Kahun] against Sebūkṭīgīn and his son Mahmūd, but once Mahmūd was firmly on the throne in Ghazna (388/998), unrest and revolt within Sistan allowed the Ghaznavid amir to intervene there, and Khalaf was finally deposed in 393/1003, dying in captivity at Gardiz a few years later.

With Khalaf the Saffārīd line ended. Later in the 5th/11th century, a new line of local rulers emerges in Sistan, under Sādjūd suzerainty, but these maliks of Nimruz, as they are often termed in the sources, had no demonstrable connection with the Saffārīds; for these maliks, see Sistan.

Although the careers of Ya’kub and ʿAmr were filled with furious military activity, allowing little time for the arts of peace, the succeeding Khalafs had a distinctly significant part in the culture of their time. In fact, Ya’kub, as a supremely successful commander, had already had his own circle of court panegyrists, one of whom, the secretary Muhammad b. Wasi [q. v.], has a significance in the renaissance of New Persian literature by his having composed verses for the amir in the only language he could understand, sc. Persian, rather than in the incomprehensible Arabic. Abū Djafar Ahmad assembled around himself a scintillating array of scholars who enjoyed his patronage, including the philosopher and logician Abū Sulaymān Muḥammad (d. ca. 375/985 [see Abū Sulaymān al-Maḍiri], and he was the maṇḍah of the Sāmānī poet Rūdākī [q. v.]. Khalaf’s court in Zarang was visited by writers like Bādir b. Al-Zamān al-
Hamadhanī; and the amir secured lasting fame for himself by commissioning a 100-volume Kūrān commentary, a summation of all previous knowledge on the Holy Book, the manuscript of which, however, did not survive the Mongol devastations of the cities of Khurāsān and their libraries.

In the Kūrān, the yellow saffrōn is used as a metaphor for the World to Come, where the souls of the faithful are expected to appear in a new form.
during the second civil war (Morony, 161). The measures adopted to deal with the administrative and other problems which arose were often of an ad hoc nature. It is generally accepted that 'Umar I, after the defeat of the Sasanids at the battle of Djalula (16/637), confiscated all lands belonging to the Persian royal house, property belonging to fire-temples, post-houses, and mills, drained marshes and swamps in Mesopotamia, exempted them from the jayy and declared them to be sawadfi al-ustun and, according to tradition, ordered four-fifths to be allotted to the army one-fifth to be reserved for the caliph for the community (ibid., 155).

Al-Baladhuri states that 'Umar established the peasants (ahl al-sawadfi) in their lands, levied jizya on their heads and task on their lands (Futūh, 273; Morony, 159). This presumably refers to the practice in the Sawād generally, including those districts made into sawadfi. According to Kudāma’s account, the task was levied in the sawadfi al-ustun at the rate of half the crop. It is not clear from Kudāma’s account whether the Sawād, including the sawadfi, was originally assessed by measurement (misaha) or by mukāsama [q.v.], that is, by a proportion of the crop. In some districts by misaha and in others by mukāsama. He states that 'Umar sent 'Umar b. Hunayf to measure the Sawād (after the conquest) and that he imposed 10 dirhams per djarib on vines and trees, 5 dirhams on date palms, 6 dirhams on green sugar cane, 4 dirhams on wheat, and 2 dirhams on barley (or according to other traditions he assessed them at a higher rate). He then measured the cultivated land and all land to which water could be brought, so that it could be cultivated, and imposed on all this by way of tax one kafīz (of its produce) and one dirham. This was changed later by the Ḫalif, taking into account the quantity of the crops and the expenses incurred in the transport of the grain and fruits to the market (Taxatio in Islam, ii, Qudama b. Ja'far’s Kitab al-Khardj, part seven, tr. with introd. and notes by A. Ben Shemesh, Leiden 1965, 39, Arabic text, 121; Abū Yusuf, Le livre de l’impôt foncier, tr. E. Fagnan, Paris 1921, 58 ff.). It seems probable that some at least of the land to which Kudāma refers, in particular that “to which water could be brought so that it could be cultivated”, was or became sawadfi.

The revenue (kharadja) from the territory of the Sawād which was made into sawadfi by 'Umar is variously recorded. According to a tradition quoted by Yahyā b. Adam, it was 7,000,000 dirhams (Taxatio in Islam, i, Yahya ben Adam’s Kitab al-kharadja, ed. and tr. with introd. and notes by A. Ben Shemesh, Leiden 1967, 53). Abū Yusuf quotes the same tradition; he also records that some of the elders of al-Madīna states that 'Umar made khatra grants from this land (Fagnan, 87, Taxatio in Islam, iii, Abū Yusuf’s Kitab al-kharadja, tr. with introd. by A. Ben Shemesh, Leiden 1969, 75). Kudāma similarly gives the figure of 7,000,000 dirhams (Taxatio in Islam, ii, 35-6). Abū Yusuf also quotes another tradition which gives the revenue of the sawadfi al-ustun as 4,000,000 dirhams (text, 86, tr., 75). Al-Māwardi, on the other hand, states that the revenue derived from one-third of the dirhams that were assessed was to be expended on the general interests of the Muslims. Contrary to the tradition quoted by Abū Yusuf, he asserts that no khatra grants were made on it (al-Ahkām al-sulfāniyya, Cairo 1966, 192-3).

Under 'Uthmān changes began to occur in the theory of sawadfi. Gradually the concept emerged that property held by the Commander of the Faithful for the Islamic community was at his disposal, and the distinction between jayy land and sawadfi became blurr...
Wasit was founded and more land was reclaimed from the swamps of Lower Iraq and turned into plantations, mines and lands of former kings (katāʾ). Anfāl lands belonged to the imām, who could alienate them as he saw fit (Hossein Modarresi Tabataba’i, Ḥarār in Islamic law, London 1983, 8 ff. See also A.K.S. Lambert, State and government in medieval Islam, Oxford 1981, 247, and Ḫalīṣa, at IV, 974).

(Ann K. S. Lambert)

**Ṣafī**

The by-name of Ṣafī al-Dīn ‘Allī b. Husayn Wāʾiz Ḳāṣẓūrī (b. 21 Ḍumādār I 897/11 February 1493-4, d. 539/1533), author, preacher and prominent Naḵšbandī Sūfī, and son of the famous Kamāl al-Dīn Husayn Wāʾiz (see Ṭabīṣūrī).

Born in Sabzawār, he was brought up and educated in Harāt. His mother was the sister of Dīzmī (q. v.). Among his early teachers were Dīzmī and Rādiyy al-Dīn ʿAbd al-Ḥafīr Lārī. He was early attracted by Naḵšbandī ideas, and travelled to Samarkand in 899/1494 and again in 939/1533-4 to study with Khādīja Ḥabīb Allāh Abrār (q. v. in Suppl., chief of the Naḵšbandī order). In 904/1498-9 he married the daughter of Khādīja Muhammad Akbar b. Saʿd al-Dīn Ḳhashghārī. After the death of his father in 910/1504-5, Fakhr al-Dīn ‘Allī succeeded him as leading preacher in Harāt. In 938-9/1531-2 he was confined for a year in Harāt when the city was besieged by the Ozbeks. When the siege was broken by the forces of Shāh Tāḥmāsp in 939/1532-3, he took refuge with Sayf al-Mulk Shāh Naḵšband Ṣūfī, the lord of Ghārdjistān (q. v.), but in the same year that area was attacked and he returned to Harāt, where he soon died and was buried in the city. Some have suggested that he became a Shi’a later in life, but nothing definite in this regard can be stated. His works are: (1) Ṣaqḥāḥ-ī ʿṣayn al-ḥayāt, completed in 909/1503-4 (ed. A. A. Muʿfīnīyān, 2 vols., Tehran 2536/1977-8); (2)

(W.L. HANAWAY)

SAFI AL-DIN ARDABI£, Shaykh Abu '1-Fath Isik, son of Amin al-Din Dlsam, born at Ardabil, became 650/1252-3, died 12 Muharram 735/12 September 1334 at Ardabil [q.e.], eponymous founder of the Safawid Order of Šafis and hence of the Safawid dynasty, rulers of Persia 907-1148/1501-1736 [see ŠAFAWIDS].

Traditional hagiographical accounts describe Šafi al-Din as being destined for future greatness from infancy. As a boy, he spent his time in religious exercises, experienced visions involving angelic beings, and was visited by the ābdîll and awati (q.v. sv.). When he grew up, he could find no mursîhd (spiritual director) at Ardabil capable of satisfying his religious needs. When he was twenty years old (670/1271-2), he travelled to Shirâz to meet Shaykh Nâjidî al-Dîn Bughâshî, who had been recommended to him as a mursîhd. On his journey south, he continued to seek a spiritual director in the various towns through which he passed, but still without success, and, on his arrival at Shirâz, he learned that Shaykh Nâjidî al-Dîn had just died. He was then advised that the only person capable of analysing his mystical state (bîl wa ahwâ£), his visions (wâkî;â£), and his spiritual stations (makâmât) was a certain Shaykh Žâhid Gîlâni. Šafi al-Dîn eventually found Shaykh Žâhid at the village of Hîlya Kîrân on the Caspian in 675/1276-7, and at once realized that the Shaykh, then sixty years of age, was the mursîhd he had been seeking.

Shaykh Žâhid treated Šafi al-Dîn with extraordinary favour. He gave his daughter Bîbî Fatîma in marriage to Šafi al-Dîn, and his son Hâddî Shams al-Dîn Muhammad married Šafi al-Dîn's daughter. Šafi al-Dîn had three sons by Bîbî Fatîma: Muhîy al-Dîn (died 724/1223-4); Šadr al-Milla wa 'l-Dîn, who succeeded him as head of the Safawid order; and Abî Sa'id. Before his death in Radjab 730/March 1301, Shaykh Žâhid designated Šafi al-Dîn to succeed him as head of the Šâhidîyya order. This caused great resentment among some of Shaykh Žâhid's followers, and especially on the part of his elder son, Šâmal al-Dîn 'Ali, and his family. Shaykh Žâhid's younger son, Hâddî Shams al-Dîn Muhammad, who was in any case Šafi al-Dîn's son-in-law, was placated by grants of land and other property. There is evidence that Šafi al-Dîn connived at the expropriation by his son-in-law of certain wâkfs controlled by Šâmal-Dîn's son, Badr al-Dîn Djamâlân; the Mongol Il-Khan Abû Sa'id [q.e.], the Mongol Il-Khan Abû Sa'id [q.e.] intervened in 720/1320 to restore the rights of Badr al-Dîn (V. Minorsky, A Mongol decree of 720/1320 to the family of Shaykh Žâhid, in ROAS, xvi/3 [1954], 519-20). On the other hand, Shaykh Žâhid's descendants were not immune from the usurpations of Mongol amirs.

Under, Šafi al-Dîn's leadership, the Šâhidîyya order, under its new name Šafawiyya, was transformed from a Šûfi order of purely local significance into a religious movement, based on Ardabil, whose religious propaganda (da'a'wa) was disseminated throughout Persia, Syria and Asia Minor, and even as far away as Ceylon (H.R. Roemer, The Safawid period, in Camb. Hist. Iran, vi, 192). Even during his lifetime, Šafi al-Dîn wielded considerable political influence, and his designation of his son Šadr al-Dîn Mûsâ to succeed him makes it clear that he was determined to keep this political power within the Safawid family. After his death, his mausoleum at Ardabil became an important place of pilgrimage (for an inventory of the contents of the shrine compiled in 1172/1758-9 by its mutawalli Sayyid Muhammad Kâsim Beg Safawi, see Ganjyina-yi Shaykh Šafi, Tabriz 1318 Sh./1939). See M.E. Weaver, The conservation of the shrine of šaykh Šafi at Ardabil, in Eran: A preliminary study, July-August 1971 (UNESCO, Paris 1971). Though no Šafis are recorded as the founder of the Safawid dynasty, which promulgated Šâhari Shî'ism as the official religion of the state, Šafi al-Dîn himself was nominally a Šunnî of the Šâhidî madhdhûb. However, given the syncretist religious climate of the period of Mongol rule in Persia, too much emphasis should not be placed on this.

Bibliography (in addition to sources referred to in the text): Darwîsh Tawakkûlî b. Ismâîl Bazzâ, Safawat al-sa'âfa, written about 759/1357-8, some twenty-four years after the death of Šafi al-Dîn. It is a mainly hagiographical work. Because the whole question of Safawid genealogy is extremely complex, and because later copies of the Safawat al-sa'âfa were tampered with during the reigns of Shâh Ismâîl I and Shâh Tahmâsp [q.e.] to produce an "official version" of the origin of the Safawids, the two copies of this ms. which anedate the establishment of the Safawid state in 907/1501 are of particular importance: ms. Leiden 2639 (dated 890/1485), and Aysosofy 3099, dated 896/1491 (lith. text ed. Ahmad al-Tibrîzî, Bombay 1329/1911). Study of these earlier mss. has led scholars to challenge the claim of the Safawid family to šâydat and to descent from the Seventh Šâhari Imâm, Mûsâ al-Kâzîm [q.e.]; see Sayyid Ahmad Tâbrîzî (Kâsrawî) [q.e.], Nâzîyâ wa ta'âbî-i Şafawiyya, in Ayanda, ii (1927-8), 357-65; Şafawitîyya sayyid nûsia and, in ibid., 489-97; and Bâz hâm Şafawiyya, in ibid., 801-12 (a later publication, Shaykh Šafi wa tabârah, 1.Tehran 1323 Sh./1944, 2.Tehran 1342 Sh./1963, is a rewritten and expanded version of these articles); Zekî Verîdi Togan, Sur l'origine des Safawides, in Mâlûs Louis Masson, Domaschîsche Studien [ed. (F. Babinger-[R.M. Savory])

ŠAFI AL-DIN ʿAbd al-Lâzîz b. Šârâvâ al-Hillî al-Taţî al-Sinbîsi, Abu 'l-Mahâsin (b. 5 Rabi'I II 677/26 August 1278 [according to al-Šâfâdi, Wâfir,}
SAFI AL-DIN AL-HILLI

Tāngiz, who was hunting in the area, to apprehend a thief who had stolen from him in Mārdīn. On that occasion al-Šafādi received a comprehensive iqāṣa from Sāfī al-Dīn for all his past and future work and all the esoteric knowledge that he was permitted to transmit. In 747/1346-7 al-Furūzābādī (d. 817/1415 [q. v.]), then still a young man of seventy, met Sāfī al-Dīn in Baghdād, when the latter was about seventy years old; he says that it was hard to believe that this man had composed the poetry he was known for (quoted by al-Šalāḥtāri, Majālis al-mušāa, Tehran 1299/1881-2, 471).

As a man of seventeen, he had composed anything but Shi‘ī and al-Šafādi says so explicitly, adding that being a Shi‘ī was nothing “heretical” (bi‘dāt) in al-Hilla (Afsūn, ii, 87, ll. 10-11). Ibn Ḥadjar felt that some of his poetry smelled of rafī (Durūn, ii, 369, penult.), in the sense of an outright rejection and vituperation of the first caliphs, although al-Ḥillī himself—and Ibn Ḥadjar is aware of that—had expressed his esteem for the first caliphs, and the Companions in general, in his poetry (see e.g. Durūn, 59, two poems). He could hardly have done otherwise in the strongly Sunni world in which he moved.

Sāfī al-Dīn’s literary output includes the following works that are extant:

1. The Durūn. Collected at the suggestion of al-Naṣīr b. Kalāwūn, probably in 732/1332 (see above), and arranged according to genres, this Durūn is expressly called a selection. Moreover, poetry composed after completion of the Diwān would not be included; however, the Durūn does contain a few poems referring to later events (see Allūḥ, 113-14, and Salīm, 38-9). Whether these were inserted by the poet himself or by later copyists is unclear. This means that a fair part of Sāfī al-Dīn’s total poetic production is not included in the Durūn; the selections offered by al-Šafādi, both in the Afsūn and the Wūfī, contain indeed a substantial number of items not to be found in the Durūn. The same is true, though to a lesser extent, for the selections made by al-Kutubī. Brockelmann (II, 160, S II, 199-200) lists a number of poems that have been transmitted outside the Durūn; no indication is given whether or not they are contained in the existing text.

The arrangement of the Durūn is as follows (note that the chapter headings are composed in saṣṣa which was the most common heraldic symbol among Sufis):

ch. 1: self-glorification, heroic songs, and incitation to assume leadership (fi ‘l-faṣḥ wa ‘l-hamāsī wa-‘l-takhrīr al-

ch. 2: encomium, praise, gratitude, and congratulation (fi ‘l-madh wa-‘l-hanā ‘u-‘l-shukr wa-‘l-hanā‘).

ch. 3: hunting poems and various descriptions (fi ‘l-
tardīyūt wa-‘l-usānd ‘u-‘l-ifṣā‘).

ch. 4: friendship poems and introductory poems in correspondences (fi ‘l-ikhwānīyāt wa-‘l-sūrūd al-

ch. 5: elegies for the great and condolences for friends (fi-marājī ‘l-a‘ydn wa-ta‘āzī ‘l-takhīd).

ch. 6: flirtatious and elegiac love poetry and elegant amorous verse (fi ‘l-hāzal wa-‘l-nastīb wa-

ch. 7: wedding, and select flower poems (fi ‘l-khamrīyāt wa-‘l-nubad al-sarhaṣṣīyāt).

ch. 8: complaint, reproof, calling in a promise and the answer (fi ‘l-šaḥwū ‘u-‘l-dabb wa-ta‘āzī wa-

ch. 9: poems announcing presents, apologies, entreaties, and poems asking for forgiveness (fi-

ch. 10: tours-de-force, riddles, and mnemonic verse
SAFI AL-DIN AL-HILLI 803

ch. 11: jocular verse, satirical poems, and obscene poems (fi ‘l-mu‘adda wa ‘l-ta‘abba‘ wa ‘l-thumā‘a fi ‘l-ta‘adda‘);

c. 12: wise sayings, poems of renunciation, and remarkable odds and ends (fi ‘l-‘adā‘a wa ‘l-zā‘īdhiyya wa ‘l-na‘awād ‘i‘l-mu‘akkhās); the

Al-Hilli clearly runs the whole gamut of existing genres and, in so doing, revives certain genres that had not been cultivated much for some time, such as the khanariyya [q. v.] and the jārdhiyya [q. v.]. Other works, such as the badi‘iyā (cf. also his knowledge of the Persian musical terms leyd, mukhmas, in-cluding mukhammas, in particular mukhammas, in-cluding takhmīsūr of existing poems), and dā‘abu (see RUBA’).

Some conspicuous poems deserve special mention:

(a) al-Kāfya al-badi‘iyā fi ‘l-mudadd‘a al-nabawiyya, a poem in praise of the Prophet modeled on the Burda [q. v.] of Abu-Būṣi [q. v. in Suppl.], thus a minhā‘ya in the metre bā‘〈, 145 lines long, each line containing one, in some cases two or three, figures of speech, 151 altogether (Diwān, 496-511). The figures are explicitly given between the lines. The story of the poem’s genesis is mentioned in a short prose introduction: how the poet intended to write a book on rhetorical figures, but was prevented from doing so by falling gravely ill; how in a dream he received a message from the Prophet enjoining him to praise the latter and promising speedy recovery; and how he combined his original intention with his new task by composing the bā‘dī‘iyā. It proved to be the starting-point of a new genre of poetry. For al-Hilli’s own commentary see below no. 2.—(b) al-Ka‘ida al-sā‘ā‘iyya, a poem of 75 lines in the tawil metre, written in the argot of the tramps, who called themselves the Banū Sā‘ān [q. v.] (Diwān, 444-8). The poem was ghost-written for a friend who for some unspecified reason wanted to be accepted in the circles of the goodftūya. It proved to be the starting-point of a new genre of poetry termed rauda ‘garden’ (see Allūh, 121-2, for a list of later specimens).

(b) The Candle Cycle, a series of seven poems of varying length, five in kāmil, one in sā‘t, welcoming and describing the candles, when they were brought in and lit in the evening maglī‘i at the court of al-Malik al-Sā‘līh (Diwān, 121-4). The first is said to have been improvised, with a promise to continue in the same way during the following nights.—(c) The Bacchic Cycle, a series of seven khanariyyas addressed to al-Malik al-Sā‘līh, one for each day of the week, each seven lines long and rhyming with the name of the day, in various metres (Diwān, 363-6).

For metrical peculiarities, one should mention a poem in a “long metre” (ta‘aw fu‘ūl) which, in the introduction, is said to have been used, if incorrectly, by earlier poets. It is in a metre termed gharīb (Diwān, 147). It seems to be a mashru‘ with a long syllable added at the beginning and end of each hemistich. Two further poems are characterised as being in Persian metres (al-awā‘il al-‘a‘dī‘iyāyya); one is in the standard form of the kāfī‘ī musaadās makhbūn mahkūfī (Diwān, 293), the other in one of the most common Persian metres, the muddā‘ī mu‘ammān akhbar makhfrī mahkūfī (Diwān, 307-9). A knowledge of Persian is not attested for al-Hilli, but it is not unlikely (cf. also his knowledge of the Persian musical terms tarā‘ma, na‘īza, na‘āzgūz, and sarband, in ‘Āṣif, 26, ll. 8-9).

2. al-Natā‘īd al-ta‘līkīyya fi ‘l-‘adā‘u al-Kāfya al-badi‘iyā, al-Hilli’s own commentary on his bā‘dī‘iyā. In the introduction he gives a short overview of the history of “the science of badī‘” and, in an appendix at the end he lists the seventy bā‘dī works that he read and used for his poem and commentary, adding that he owned copies of most of them. The figures are explicitly given between the lines. The story of the poem’s genesis is mentioned in a short prose introduction: how the poet intended to write a book on rhetorical figures, but was prevented from doing so by falling gravely ill; how in a dream he received a message from the Prophet enjoining him to praise the latter and promising speedy recovery; and how he combined his original intention with his new task by composing the bā‘dī‘iyā. It proved to be the starting-point of a new genre of poetry. For al-Hilli’s own commentary see below no. 2.—(b) al-Ka‘ida al-sā‘ā‘iyya, a poem of 75 lines in the tawil metre, written in the argot of the tramps, who called themselves the Banū Sā‘ān [q. v.] (Diwān, 444-8). The poem was ghost-written for a friend who for some unspecified reason wanted to be accepted in the circles of the goodftūya. It proved to be the starting-point of a new genre of poetry termed rauda ‘garden’ (see Allūh, 121-2, for a list of later specimens).

4. al-Kisā‘ al-ta‘lī al-hall wa ‘l-murarshdā‘as al-gāli, the first poetics of Arabic dialect poetry. It deals with the
four genres of zadjal [q.v.], mau'dliyd [q.v.], kdn wa-kan [q.v.], and kun'd [q.v.]. The work is not only as a—normative—description of the generic, prosodic, and linguistic properties and of the various types of popular poetry, but also as an anthology that has preserved much that would otherwise be lost. Ritter and Hoenerbach have exploited it for the contribution it makes to our knowledge of the work of the zadjal poets Ibn Kuzmān (d. 555/1160 [q.v.]) and Mudgādalīs (d. after 577/1181-2) (see Bibli.). In addition, Šafi al-Dīn also includes a goodly amount of his own production. He explicitly says that in his Diwān he collected only his own production and other verses by his contemporaries. He explicitly says that in his Diwān he collected only his own production and other verses by his contemporaries.

In a way, then, the Diwān is an extension of his Risālah, an antibarbarus, preserved in ms. Escorial 123 (63 folios, see Huwwar, 64).

There are five Risālah printed in the Diwān: (a) Risālah al-Dīr fī mudhawwarā fār (Diwān, 484-91). This is a matāma-like story which, in an amusing style, addresses a complaint to al-Malik al-Sāliḥ. The narrator is al-Hillī’s house in Mardin which describes to its neighbour, the citadel of the Artukid sultan, how the mice in the house complain to each other about the hard times on which the owner of the house has fallen, due to a large overdue loan given by him to a high governmental official.—(b) al-Risālah al-muhmāla (Diwān, 511-13). Addressed to al-Nāṣir b. Kāfūwān in 723/1323, it contains a complaint against the vizier Karīm al-Dīn [see Ibn al-Sādīd, Kārīm al-Dīn]. As indicated by the title, the risālah is entirely composed of words with undotted letters.—(c) al-Risālah al-taw‘umiyah (Diwān, 513-15). Written in 700/1300-1 in Mardin, it grew out of a discussion in the madjīl of al-Malik al-Mansūr about a poem by al-Harīrī [q.v.] which displayed a technique that al-Hillī then imitates throughout the risālah, to wit: the text consists entirely of pairs of words that are identical in their rām but differ slightly in their pronunciation. The members of the madjīl opined that none of their contemporaries would be able to imitate al-Harīrī’s tour-de-force. Saṭī al-Dīn took up this challenge and produced a selection of fragments of two or three lines from the madjīl, presented in a treatise on prosody, but adds to it, see Muhammad Kūrd al-Maṣāḥf al-Maṭḥūt, 46 msūdith (43 folios, see Huwwar, 73).—(d) Halī al-mansūm (Diwān, 515-17). This is actually a report about a literary challenge, in which the author is asked to form a risālah out of all the letters, without addition or repetition, of the first seven lines of the Ma‘ālikāt of Imrā’ al-Kāys and then to reassemble them in a poem in the same metre and rhyme. Which, of course he does.—(e) An answer to this challenge is sent by al-Malik al-Kāhir, lord of Arzan [Erzurum], to al-Malik al-Sāliḥ, lord of Mardin, on the occasion of the death of the latter’s brother al-Malik Nāṣir al-Dīn (Diwān, 517-18).—A fair number of rasā‘il must have been lost, as witnessed by the collection of short poems in the Diwān that are said to have served as proems (ṣuddūr) to the author’s epistles (see above).

As a poet, al-Hillī has enjoyed a rather uneven reputation. For his contemporaries he was “the poet of our time” (ghā‘iru ‘ar‘inā ‘ala ‘l-ilāl, al-Ṣafādī, Wafi, xviii, 482, l. 1) and for some even unrivalled among all poets, ancient and modern (lam yanzim-i ‘l-shi‘ra ah‘abna mithlhu lā fī ‘l-mustākhkhirina mu‘ala‘, Sams al-Dīn ‘Abd al-Latif [d. 731/1330], ms. preserved in Paris, 1553, was read before the court. The date given seems to suggest that his stay in Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).—a) An answer to this challenge is sent by al-Malik al-Afdal, lord of Mardin, to al-Malik al-Salih, lord of Mardin, it grew out of a discussion in the madjīl of al-Malik al-Afdal of Damascus, 1463 (diwān, 515-17).
The characteristic language (even in his youth, Safi al-Din went to Baghdad. Well-educated in Arabic language, literature, history and penmanship, he aims at an accessible, easily comprehensible poetic vocabulary." (W.P. Heinrichs)

Bibliography: Works. (1) Dīwān, Damascus 1297/1879-1300/1883 (editio princeps, used here for quotation, containing also the chapter on obscure poetry, suppressed in the two Beirut editions); the later editions Beirut 1893, al-Nadājī 1959, and Beirut 1961 are at the second Beirut edition with numerous omissions. All are uncritical and rather faulty. The claim on the title page of the al-Nadājī edition that it is based on several ms. is untrue. A critical edition, including the poems preserved outside the Dīwān, has been prepared by Muslim Ibrāhīm Huwwār (not seen; published?), see Huwwār, 5-7; monographs: Dīwān, Damascus and Beirut 1410/1990.—C.E. Bosworth, The Medieval Islamic underworld, 2 vols., Leiden 1761, i, 132-49; ii, 291-345, Arabic pagination 43-84; M. Hartmann, Das Arabische Strophengedicht. 1. Das Muwāshah, Weimar 1939, 79-80; R. Ritter and W. Hoenerbach, Neue Materialien zum Zācāl. I. Ibn Qumān [s]. II. Mudgālīs, in: Oriens, iii (1950), 266-315, v (1952), 269-301 (mostly based on materials found in al-Æţīl); W. Hoenerbach, intro. to Æţīl. (W.P. Heinrichs)

The sources are silent about the ethnic origin of his family. He may have been of Persian descent (Kuβ al-Dīn Shīrāzī [q.v.]). He has a Mu‘tāb-Êl ‘Irān. In his youth, Safi al-Dīn went to Baghdad. Well-educated in Arabic language, literature, history and penmanship, he named a place for himself as an excellent calligrapher. After the fall of the caliphate, he joined the library built by the caliph Musta’sīm. Both Yākūt al-Mustas’īmī [q.v.] and Shams al-Dīn Ahmad al-Suhrawardī (d. 741/1340) figure among his disciples in the art of calligraphy. After the fall of the caliphate, the governor of ‘Irāk, ‘Alā’ al-Dīn ‘Atā-Malik Dūwaynī [q.v.], and his brother, the sāhib-i dīwān Shams al-Dīn Muhammad Dūwaynī [q.v.], placed him in charge of the Dīwān (Dīwān al-Êtalak) of Baghdad. The honorific titles of al-Êtalak al-kabīr, al-Êtalak al-fātīḥ, and al-Alamān, given to him in 675/1277 by the renowned litterateur and philologist Ibn al-Su‘aykāl (d. 701/1302), indicate his high literary and social status. He had also studied Shī‘ī law and comparative law (khilāf al-fikhr) at the Muslimān-riyya madrasa (opened 651/1254). This qualified him to assume a post in al-Mustas’mī’s juridical administration and, after 656/1258, to head the supervision of the foundations (mukārarnat al-Mustas’mī) (opened 653/1257), when Naṣīr al-Dīn al-Tūsī [q.v.] took over.

Only in the later days of al-Mustas’mī’s reign did al-Urmawi become known as a musician and excellent lute player and accepted as a member of the private circle of boon companions, thanks to one of his music students, the caliph’s favoured songstress Luḥāz. His additional salary of 5,000 dinārs (60,000 dirhams at arabischen Verskunst, Bonn 1883, 405-8 (tawriya) of a Hamdas poetry by Kaṭari b. al-Fudjārī [cf. Dīwān, 15-16], with German tr.); O. Rescher, Beiträge zur Arabischen Poesie (Ubersetzungen, Kritiken, Interviews), vi/1: Qasīdān fi Safi eddīn al-Hilli, Ibn al-Wardi, El-Bustī, al-Êṭā’ī und Frazadag, Stuttgart 1954-5, 1-49.—Studies. For an overview of critical writings in Arabic, see Huwwār, 5-7; monographs: Dīwān al-Dīn al-Tūsī, Baghdad 1379/1959; Muhammad Rizk Salīm, Safi al-Dīn al-Hilli, Cairo 1960; Yāsīn al-Ayyūbī, Safi al-Dīn al-Hilli, Beirut 1971; Muḥammad Ibrāhīm Huwwār, Safi al-Dīn al-Hilli, Hayyūt wa-Êtalak al-Êtalak, Damascus and Beirut 1410/1990.—E. Bosworth, The Medieval Islamic underworld, 2 vols., Leiden 1976, i, 132-49; ii, 291-345, Arabic pagination 43-84; M. Hartmann, Das Arabische Strophengedicht. 1. Das Muwāshah, Weimar 1939, 79-80; R. Ritter and W. Hoenerbach, Neue Materialien zum Zācāl. I. Ibn Qumān [s]. II. Mudgālīs, in: Oriens, iii (1950), 266-315, v (1952), 269-301 (mostly based on materials found in al-Æţīl); W. Hoenerbach, intro. to Æţīl. (W.P. Heinrichs)
that time) from this activity allowed him to lead a luxurious life. It also helped him to survive the fall of Baghdad, namely, by generously accommodating one of Hulagu's officers who, in return, introduced him to the new ruler. Hulagu was impressed by his art and erudition, and doubled his income, if we can rely on the autobiographical data given by al-Urmawi to the historian Lizz al-Din al-Irbili (d. 726/1326) when they met at Tabriz in 689/1290. His musical career, however, seems to have been supported mainly by the Djuywan family, especially by Shams al-Din Munzawi, who paid him a sum of 300 dinars on his death in 685/1286. After the demise of his patrons, he fell into oblivion and poverty. Placed under arrest on account of a debt of 300 dinars, he died in the Shafi'i Madrasat al-`ijal in Baghdad. Two of his sons became secretaries in the capital. One was called Kamal al-Din Ahmad; the other, Lizz al-Din `Ali, died in 671/1272 and was buried in the ribat of Ibn al-Sukran (d. 671/1272), near Baghdad (see Ibn al-Fuwatil, Madq al-adab, sub letters `yan and kaf). Another son, Djialal al-Din Muhammad, was a man of letters and in 676/1299 attended Ibn al-Saykal's interpretation of his al-Makamaat al-Zaynija in the Mustansiriyya (see G. `Awwadi and H. `A. Mahfu`z, in Madq. Kil`i. Adab, Baghd`, iv [1963], 261).

As a composer, al-Urmawi cultivated the vocal forms of sawt, kawl and nauha. That the sawt was, in his days, a song of only a "few parts" (ka`lih al-adabi'ah), is confirmed by Mubarakshah in his commentary on al-Urmawi's Kitab al-Adwar. This is confirmed by two examples of sawt compositions that al-Urmawi has recorded in musical notation at the end of the K. al-Adwar, using letters for the pitch and numbers for the length of the notes. Kawl songs were more sophisticated compositions, as shown by a piece by al-Urmawi set down in a score by Kutb al-Din ShlrazI at the end of the music chapter of his Durrat al-ta`dil. A kawl could also be one of the three (or four) parts of the vocal "suite" (nauha [q.v.]), a musical genre favoured in al-Urmawi's time. Safi al-Din is reported to have composed no less than 130 pieces in the sawt form. Most of them were still known to the noted musician Kutayla (fl. 730/1330) who performed them at the courts of Mardin and Cairo. Al-Urmawi's students included the secretaries in the court of his patron, Ahmad b. lsra`il al-Hakim (d. 667/1269), near Baghdad (see Ibn al-Fuwatil, Madq al-adab, sub letters `yan and kaf), and definition of the scales constituting the system of the twelve modes (see O. Wright, below), precise depictions of contemporary musical metres, and the use of letters and numbers for the notation of melodies. All this occurs in the K. al-Adwar for the first time, making it a historical source of greatest value. By its conciseness it became the most popular and influential book on music for centuries. No other Arabic (Persian or Turkish) music treatise was so often copied, commented upon and translated into Oriental (and Western) languages. The K. al-Adwar was conceived as a compendium (mu`khasar) of the standard musical knowledge. However, owing both to its apparent uniqueness and to the fact that not a single authority or written source is quoted, the book was regarded as an original work with innovative contributions of its author, especially with regard to the division of the octave.

Considering the youth of the author and the purely descriptive style of the book, which does not reveal any personal contribution, the original part of Safi al-Din cannot be ascertained and may have been less than assumed. An analysis of the extant manuscripts, many of them transmitted anonymously, and of the differing redactions of the text, might help to clarify this question. The K. al-Adwar was translated several times into Persian. In addition to some anonymous translations, one was made in 746/1345 by `Imad al-Din Yabaya b. Ahmad Kaghani for the ruler Abu `Isa Sham`an (see Munzawi, no. 40736). An enlarged version of the text was translated in 1296/1879 by Mirza Muhammad Isma'il b. Muhammad Dja`far Isfahani, and dedicated to Mirza Akh Khan Nuri, the padi-i `asam of Nasir al-Din Shih (printed, see below, cf. Munzawi, no. 40737). A Turkish translation, the only one not written in Arabic, was made by Shihab al-Din Shih of Shkirkullah (9th/15th cent.), and incorporated, as chapters 1-15, into his compilation called Risala min `samal al-adwar (see Ra`uf Yekt, in MTM, ii/i [1331/1913], 137; M. Bardakgi, in Tarih ve toplum, xi [1990], 350-4). Several commentaries were composed during the 8th/14th century and at the beginning of the 9th/15th. The first of them, Khwastat al-adwar fi mu`rifat al-adwar, was written in Persian on behalf of Sultan Uways [q.v.] by Shihab al-Din `Abb al-Din al-`Sayravi (Munzawi, no. 40754). A most important Arabic commentary was composed in 777/1375 by a certain Mubarakshah and dedicated to Shih Shugja` (French tr., see below; H.G. Farmer's identification of the author with `Ali b. Muhammad al-Djurjani is not convincing). A Persian commentary was written in 798/1396 by Lutf al-Din Muhammad b. Mahmud Safarwalla on behalf of a certain Amir Zada Sayar (see Munzawi, nos. 40793-94). Another Persian commentary was written by `Abb al-Kadir b. Ghaybi Maragh, supplemented by a lengthy khaituma, called Zawad id al-fauad (printed, see below). A passage from the K. al-Adwar was translated into French by B. Pétis de la Croix (d. 1713) on the request of Joseph Sauveur (d. 1716) who gave a first account of al-Urmawi's division of the octave (Systeme général des intervalles de sons, in Mémoires de l'Acad. Royale [Paris
SAFI AL-DIN AL-URMAWI — SAFI FUD

1701], 328-30). A more complete French translation, based on the anonymous ms. Paris B. N. ar. 2865, was made by A.-F. Herbin (d. 1806) on behalf of G.-A. Villoteau. He printed part of it in his De l'art musical en Egypte (in Description de l'Egypte, État moderne, xiv, Paris 1826, 47-110). The interpretations of both Villoteau and Fétis (Histoire générale de la musique, ii, Paris 1869, esp. 55), who erroneously detected one-third-tones in the scales described by al-Urmawi, were inferior to that of Sauveur, and even more so to the correct description already given by J.-B. De La Bédoyère (Essai sur la musique ancienne et moderne, i, Paris 1780, 163-6). The French division of the octave was much appreciated by European scholars from the late 19th century onwards.

Safi al-Din's second book, al-Risāla al-Sharafiyya, was written around 665/1267. It is dedicated to his great predecessor al-Farabi, although being the more extensive work, was, on the whole, less popular than the K. al-Adawār. In Kutb al-Adawār's Durrat al-tādż, and in the works of 'Abd al-Kādir Mārāghi, however, it was extensively used (partly criticised by Shīrāzī, but defended by Mārāghi). The latter even refers to the Durrat al-tādż as a commentary on the Sharafiyya (see Mākāsid al-adhān, Tehran 1344/1957, 58).

The supposed title Fī 'ulūm al-'arād wa la-kawdī wa l-badiʿ in ms. Oxford, Bodleian, Clark 21/1 (fols. 1-71, copied 1758/1557, see Cat., ii, 201-4, no. 247) is not the title of another book written by al-Urmawi (Brockelmann, S I, no. 3, follows Farmer), but the subtitle of the Miṣrīr al-maṣāfī Fī 'ulūm al-ghārīb by the philologist ʿIzz al-Dīn ʿAbd al-Wahhāb b. ʿIbrāhīm al-Zandjānī (Brockelmann, S I, 498, no. IV).

**Bibliography** (in addition to the sources quoted above):

(Ε. Neubauer)

SAFID KUH (p.), in Fāṭḥi Spīn Qāhār ("The White Mountain"), the name of a mountain range falling mainly in eastern Afghanistan. According to Bābur, it derives its name from its perpetual covering of snow; from its northern slopes, nine rivers run down to the Kābul River (Bāhūr-nāma, tr. Beveridge, 209, cf. Appx. E, pp. xvii-xix).

The Safīd Kūh, with its outliers, runs from a point to the east of Gāznā [q. v.] in a northeasterly and then easterly direction almost to Aitock [see aṭāk on the Indus (approx. between longs. 68° 40' E. and 72° E.), in general separating the Kābul and Lōgar River valleys on its north and west from the Kābul and Helmand valley and the Aīrīfī area of Tirāh on its south. Its highest peak is Sīkārām (4,761 m/15,620 ft.). The Khyber Pass [see khybar] lies at its northeasterm tip, and on its northern and eastern spurS are the passes between Kābul and Djalalābād which the British forces involved in Afghanistan during 1841-2 had to negotiate. The middle part of the range forms the present political boundary between the Nangarhar [q. v.] province of Afghanistan and the Khūram [q. v.] Tribal Area of Pakistan.

(Ε. Neubauer)

SAFID RUD (p.) "White River", a river system of northwestern Persia draining the southeastern part of Afghanistan. It was, in mediaeval Islamic times, the region of Dāyām [q. v.] and one of the sources of the 4th/10th century already called it the Sabīd/Sapīdād Rūd, and Hamd Allāh Mustawīf (8th/14th century) clearly applies it to the whole system.

In more recent times, however, the name tends to be restricted to that part of the system after it has been formed from the confluence at Marjīl of its two great
affluents, the Kīzīl Üzen [q.v.] coming in from the left and the Şah Rūd from the right. This stretch forces its way through a gap between the Alburz Mts. in the east and the Tälik Mts. to the north-west, and runs down to the Caspian Sea. Thus although its affluents are quite lengthy, the Şafīd Rūd itself runs now for only some 110 km/60 miles. When it reaches the coastal plain of Gīlān [q.v.], the river divides into numerous channels, whose courses are continuously shifting, and flows out through the delta which the river’s alluvia have pushed out into the Caspian. Parts of this delta region are thickly wooded; and a hundred years ago, the coast was unhealthy; here also, rice is cultivated. The gap between the mountains through which the Şafīd Rūd flows provides a means of communication from Gīlān to the plateau of the Persian interior, and at the present time carries the Rasht-Kazvīn-Tehran road.

ŞAFİNA (a. pls. sufûn, şafînûn, şafîn), a word used in Arabic from pre-Islamic times onwards for ship. Seamanship and navigation are in general dealt with in MILÂFA, and the present article, after dealing with the question of knowledge of the sea and ships in Antiquity, in the time of the birth of Islam, not covered in MILÂFA, will be confined to a consideration of sea and river craft. 1. In the pre-modern period. (a) Pre-Islamic and early Islamic aspects. The most general word for “ship” in early Arabic usage was markâb “conveyance”, used, however, in the first place for travel by land, with such specific meanings as “riding-beast”; “conveyance drawn by animals”. Şafîna “ship” occurs only sparingly in the Kur‘ān (three times, in connection with the boat used by Moses and al-Khîdr and with Noah’s Ark), and was early noted, e.g. by Guidi and Fraenkel, as a probable loan word from Syriac (with Hebrew and Akkadian forms), ultimately from the common Semitic root s-p-n “to cover”, cf. Akk. sapmatu, “to cover in”, cf. Akkad. pmah, “to cover”, Arabic sapâma, “to cover behind”, and Hebrew sapâma, “to cover”. The Periplus of Aximinus (Baroda 1938, 171-2); much more frequent in the Kur‘ān is the word markah “ship”, as in Jonah, i, 5; it probably entered Arabic via Syriac at an early date, since it occurs in pre-Islamic poetry (see S. Fraenkel, Die aramäischen Fremdwörter im Arabischen, Leiden 1886, 216-17; A. Jeffery, The foreign vocabulary of the Qur‘ān, Baroda 1938, 171-2). Much more frequent in the Kur‘ān is full, used inter alia of Noah’s Ark and the ship from which Jonah was thrown, again clearly a loan word, but of less certain origin than şafîna. Völlers suggested one from Greek ephihoton “a dinghy towed after a boat”, but also found in The Plutus of the Erythraean Sea to denote a larger vessel used in Red Sea waters (see Jeffery, op. cit., 229-30).

The absence of a genuine Arabic word for “ship” is not surprising, given the Arabian peninsula’s total lack of navigable rivers or lakes; the region thus contrasts sharply with the Nile valley of Egypt and with Mesopotamia, where traffic on its rivers early gave rise to a highly-developed vocabulary in Akkadian relating to ships and navigation (see A. Salonen, Die Wasserfahrzeuge in Babylonien nach sumerisch-akkadischen Quellen ..., Studia orientalia, Societas orientalia fennica, viii/4, Helsinki 1939), with a linguistic legacy which was handed down to Islamic times (see below). The Arabian peninsula is, on the other hand, surrounded by seas on three sides, hence some of its inhabitants at least must have had some acquaintance with the sea and ships, even if the Arabs of the Hijāz and Najd preferred travel by land, so that the original direction of Arab-Islamic expansion was northwards to Palestine, Syria and Irāq rather than e.g. across the Bāb al-Mandab towards Ethiopia and the Horn of Africa. This reason of use of ships was certainly familiar to the populations of the southern shores of the Persian Gulf, but the sailors involved were probably from the mixed Persian-Arab element of these coastlands; see further on this, G.F. Hourani, Arab seafaring in the Indian Ocean in ancient and early medieval times, Princeton 1951, ch. i, and MILÂFA.

A consideration of the sea in the Kur‘ān and of Muhammad’s possible knowledge of it was undertaken by W. Barthold in a brief but suggestive article, Der Koran und das Meer, in ZDMG, lix, 1929, 37-43. He asked, with justice, how the Holy Book could contain such vivid pictures of the sea and its storms. “This question”, he says, “is of particular interest, because descriptions of the sea are in general foreign to Arab poetry, particularly pre-Islamic. Muhammad’s biography does not credit him with any sea voyages, not even with a journey along the coast”. Nor does it make him visit any of the seaports of the time like Djudda [q.v.], Shu‘ayba or Ghaza [q.v.]. Nödeke went so far as to assume (Hl., v 1914, 163, n. 3), where he was dealing with the trade of the Kuraysh with Abyssinia, that Muhammad “may possibly himself have been there on one occasion, as suras X, XXIX, 65, XXIV, 40, stand as if he had personally experienced the coast trading of the Sa‘idan”. Fraenkel (op. cit., 211) deduced from the Kur‘ān, “that the early Arabs well appreciated that their land was washed by the sea on three sides. Seafaring was of great importance, at least among the commercial circles to which Muhammad belonged”, otherwise, he thought, Muhammad would not have spoken in no less than 40 passages of the grace of God, who puts the sea at the service of mankind. Fraenkel in this characteristic “regular traffic” with Abyssinia, which is indicated among other things (e.g. Abyssinian slave-girls in Arabia at this time) by two traditions, according to one of which the wood of a ship stranded at Shu‘ayba was used for building the Ka‘ba (al-Tabarî, i, 1135), and, according to the other, the first muhādîrân sailed on two merchant ships which were going to Abyssinia (al-Tabarî, i, 1134). In the second passage there is nothing to indicate that the ships were Arab (Lammens, La Mecque à la veille de l’Hégire, Beirut 1924, 380, thought that they were foreign). Everything indicates that it is much more probable that this connection between Arabia and the opposite coast was maintained by the Abyssinians, a suggestion made also by Barthold, op. cit., 43, for quite different reasons. Lammens (La Meque, 305) even spoke—not, however, without encountering contradiction—of an Abyssinian dominion of the seas and found in the Meccan chronicles no mention of an Arab ship trading with the kingdom of Aksaum (idem, Le berceau de l’islam, i, Rome 1914, 15). On the other hand, he had to acknowledge that the many references in the Kur‘ān and Sirâ to navigation suggest an intimate acquaintance with the sea. But no companion of Muhammad of the Tihama is ever mentioned as a sailor; this is left to the foreigners on the Red Sea coast (idem, La Meque, 379).

Among the references to sailing in the early poetry, that in l. 102 of ‘Amr b. Kulâmî’s Mu‘allaqâ is specially remarkable. He boasts of his Taghibis that they cover the surface of the sea with their ships. While Goldziher (Das Schiff der Wüste, in ZDMG, xliv [1890], 165-7), who held Fraenkel’s point of view, said that this line is undoubtedly of great importance, Nöldeke, Einleitung zu Mu‘allaqa, i, 49, was inclined to the
view that "the Taghlib used sometimes to sail the Euphrates in boats" and that "there can be no question of seafaring in the proper sense". He takes bahir here to mean the broad waters of the Euphrates. The whole context shows that we have here to deal simply with a poet's boasting (cf. also G. Jacob, Altarabische Bedueneleben, 149), which would have all the more effect as this kind of activity on water was quite unknown to other tribes and, indeed, they had a certain fear of it (see below). Apart from this isolated line, Goldzither, op. cit., pointed out that, in the old poetry, the sea and various elements in navigation are frequently used in similes; the caravan on the march, for example, is frequently compared with ships sailing on the sea. These images, which are usually quite colourless, may, however, have originated on the coast and have wandered inland as clichés, without it being necessary to assume that the poet using them was personally acquainted with the sea. One recalls the stereotyped nature of the sahab [q.v.].

Now, as the occasional references to navigation must have some basis in fact, and on the other hand, we know nothing of any enterprises by sea on any large scale, it is natural to assume that "the Arabs before Muhammad never got beyond coastal traffic along the Red Sea and the Persian Gulf", as Wüstenfeld supposed in NGW Gött. (1880), 134. Lammens, La Meccque, 381, thought that there can only have been fishing on a very small scale not far from the shore and the occasional plundering of stranded ships (see above). With regard to the "foreign imports", which were already found at this date in Arabia, Jacob thought, op. cit., 149, that "in any case foreign ships (especially Ethiopian and Indian) came to Arab ports more often than vice-versa". Imports are indicated by numerous foreign wares, while, as G.W. Freytag, Einleitung in das Studium der Arabischen Sprache, Bonn 1861, 276 ff., emphasised Arabia had few products likely to be exported by ship to foreign lands.

These remarks, however, hold primarily for the Hijjaz and adjoining lands and cannot be applied without question to the whole of Arabia. For this region, in particular, there were certain factors unfavourable for the development of shipping. The story of the stranded ship (see above) clearly shows the lack of shelter and the occasional plundering of stranded ships. There are no good or large harbours on the coast; certain old anchorages like Leukokeime, al-Djär [q.v.] and Shu'aibya later became quite deserted [see hijjaz]. The Red Sea itself was dreaded on account of its storms and reefs, particularly in the north (see bahir al-kulzum, and A. Mez, Die Renaissance des Islams, Heidelberg 1922, 476, Eng. tr. 509). Arabia had, moreover, no navigable rivers which might have formed a training-ground for seafaring.

It is no wonder, then, that the true Badawi had a natural horror of the sea which for long prevented him from entrusting himself to the water. This attitude must have hampered the beginnings of Islamic seafaring, and can still be traced even to-day (see L. Brunot, La mer dans les traditions ... à Rabat et Salé, Paris 1920, 1, 3; W.G. Palgrave, Narrative of a year's journey ..., London 1865, i, 430, quotes "the most un-English words of the Hejazee camel-driver": "He who twice embarks on sea is a very infidel")). This dread finds expression in the Kur'ān, where we have references to "waves mountains high", "darkness on the wide sea", "clouds of darkness piled upon one another", etc. (sías X, 44, XXIV, 40, also X, 23, XI, 45, XXXI, 31; cf. also the humorous poem in Nölecke, Delectus, 62). Perhaps it is for this reason that the Meccans left navigation to foreigners (see above); in addition, there was the contempt felt for certain trades (see Goldzither, in Globus, i, 1894, 203-5). As the Azdis in "Umnān were sailors and fishermen, they were scourged by the Tamīn as "sailors" (see Wellhausen, Skizzen und Vorarbeiten, vi, 25). We have also references to Nabatean and occasionally also to Jewish sailors (see Lyall, The Doiways of 'Abīd b. al-Ābras ..., Leiden-London 1913, pp. viii, 5, 6).

It is therefore not surprising that in later times, when the trade in slaves in the desert and in war was finally recognised, sayings were put into the mouth of the Prophet definitely permitting trade by sea and praising the merits of the martyr of the sea (see Wensinck, Handbok, s. v. Barter and Martyr(s); also Lammens, Le berceau de l'Islam, 15-16). But it was a long time before this view prevailed. Even at the time when Muhammad was cutting the Kuraysh off from their markets in the north, they preferred a great detour through the desert to taking the sea route (Lammens, La Meccque, 381). The first caliphs were still against any enterprise at sea. 'Umar was greatly impressed by a series of misfortunes in the Mediterranean and Red Sea (al-Ṭabarî, i, 2595, 2820; he is said to have forbidden sailing [or only for worldly purposes?], see Goldzither, Das Schicksal der Wüste, loc. cit.). He even went so far as to punish the chief of the Badjila tribe 'Arfaqā b. Harmīsh b. al-Brākī, whom he had ordered to invade 'Umnān, because he had done it by sea, even although he had been successful ( Ibn Khaldûn, Tac. ii, 211). Yet within five years of Muhammad's death (15/637) an Arab fleet from 'Umnān reached Tānāh near Bombay and another expedition went to the Gulf of Daybul (al-Balāghûr, Futūḥ, 431-2). But it was Mu'aūwiya who was the founder of the Arab navy. The creation of a fleet became more and more urgent during his wars against the Byzantines, in which the harbours of the Levant coasts and Egypt were often threatened. On this question, he had during his governorship to meet the resistance of the caliphs, but 'Uṯmān finally consented. Alexandria, in particular, provided ships and sailors. It was not till a later date that Mu'aūwiya said to have established naval bases on the Palestine coast also (al-Balāghûr, 117). In spite of their dread of the sea, "the Arabs made the change from the desert and the sea to the ship with astonishing rapidity" (so Wellhausen, in NGW Gött. [1901], 418). Bold and daring admirals soon arose among them, notably Busr b. Abī Arjāt and Abu 'l-Awar al-Sulâmī [q.v.].

We possess only very eixiguous information on the actual vessels used in early times round the coasts of Arabia. These were probably simple craft, made of planks bound together with cords of palm fibre (such seems the most probably meaning of dhāt alwdh wa-ḍawṣur in Kur'ān, LIV, 13, a description of Noah's Ark): one of the awlāḏ [q.v.] which the udābah enumerated was that the Umayyad governor al-Hadhdhdhā b. Yūsuf [q.v.] was the first to have had constructed ships of timber with the planks nailed and caulked (al-Dāhî, Hayawān, ed. A.S. Härin, Cairo n.d., i, 82-9). The so-called "sewn [with cord of fibre]" ships used by the Umayyads, up to the 9th/15th century, as a feature of Indian Ocean sea building; a travellers' tale doubtless invented to explain the prevalence of this construction practice posited the existence of magnetic mountains or islands in the Red Sea or in Indian waters which drew the nails out of ships and caused them to sink (see maqānīṭis, 1, at vol. V, 1168a).

(H. Kindermann-[C.E. Bosworth])
In Mediterranean waters, the Arab ships used against the Byzantines were crewed by the Greco-Semitic population of the Levantine and Egyptian coasts and carried a fighting force, initially of the Arab mukāṭila and then, at a later period, of professional soldiers, whose task was to hurl projectiles at the enemy, engage in hand-to-hand fighting when required and to disembark for land operations. Amongst various types of ship mentioned is the ṣawaf-al-kaṭin ṣuḥūr al-khulī, pl. ṣawā′dūn, a vessel of the galley type, i.e. with a crew of oarsmen, whose use is mentioned in the Arabic chronicles up to Mamluk times. Ibn Hawkal and al-Mukaddasi (4th/10th century) apply it to the corresponding Byzantine vessels, of the dromon or war galleym type (see H. Kindermann, "Schiff" im Arabischen. Untersuchung über Vorkommen und Bedeutung der Termini, Zwickau i. Sa. 1934, 53-4; Darwish al-Nuhayli, al-Suťan al-islāmīyya ṣalā ḥarīf al-muqādim, Cairo 1974, 83-5; Milan, 1. 1, at vol. VII, 44b). Another term, khālī/khāliyya, pl. khālīyya, is defined as a large ship: an attempt to see in this word the origin of Old Span. galea/galera, i.e. galleys, was rightly dismissed by Kindermann, op. cit., 25, as implausible. Frequently mentioned in accounts of the naval warfare between the Muslims and the Franks during Crusading and Mamluk times is the large galleym called ǧarbah; thus the expedition launched from Būlāk by the Mamluks sailed up the Euphrates and the Tigris against the Byzantines (see H. Kindermann, dromon in the constituting and deployment of Muslim navies of the 9th/15th century, a new phase of ship construction in the Levant. Turkish nautical terms of Italian and Greek origin, although probably adopted from the Mamluks, were retained and later, the English and Dutch. In the Mediterranean, see BAHRIYYA. 1. The navy of the Mamluks. (c) The Mesopotamian-Khūzistān river systems.

Here, nautical traditions went back to ancient times (see Salonen, op. cit.). Some terminology from the Sumerian and Akkadian languages was carried over into the Arabic vocabulary of sea and river navigation and of irrigation constructions and practices of Umayyads and Abbasids (see Kahane and Tietze, 523-6, no. 202), and probably also with the terminology of irrigation practices and hydraulic constructions in the Eastern Arab and Iranian worlds in the third-fifth centuries A.H., in Jnl. of Islamic Studies, ii (1991), 78-85). Likewise, there must have been some continuity in the design and building of boats suitable for use on the Euphrates, Tigris, Karun and their tributaries; and the Christians had to operate in the comparatively storm-free spring and summer months, especially as such ships, with their cannon as well as their oarsmen and fighting troops, carried large crews in relationship to their size, hence could not operate for too long away from base.

The Venetians made an innovation in naval technology with the use of the galleass in their fleet at Lepanto (see AYNABAKHT!) in 1571; this ship tried to combine the advantages of the galleon, with the ability to fire cannon broadsides, and of the galleym, with its hull and rigging. The Ottomans started building them (Tksh. maʻassen) in the next year, but it was not until the later 11th/17th century that the Ottomans began to employ galleons on a large scale. See in general, H. H. Uzunçarşılı, Osmanlı devletinin merkezi ve bahrîye teyârîsî, Ankara 1948; G. H. Imber, The navy of Suleymân the Magnificent, in Archivium Ottomanicum, vi (1980), 211-82, with a useful glossary of naval and administrative terms at 277-82; and bahrîyya. 3. The Ottoman navy.

The historical and adab sources of the 'Abbāsids period are replete with references to the various types of craft which were conveyed both passengers and freight on these rivers, which were exceptionally favourable for navigation, especially as the slightly higher level of the Euphrates, compared with the Tigris, meant that the transverse canals from the former to the latter could be used for speedy transport. The Euphrates was navigable up to Samosata [see SUMAYSAT], hence could be used for goods traffic be-
victorious Tigris and the Djazira and northern Syria, whilst down the Tigris to Baghdad came goods ... in Twelver Shi'ite texts was to act as senior agents (wakils) of the twelfth imam and to oversee the affairs of the con-

Heidelberg 1902, Abulkdsim, ein bagddder Sittenbild, Armenia and Kurdistan. Amongst the large ships mardkib known to the pre-Islamic poets who frequented

kurkur, used especially for freight are mentioned the

lrak and the Djazira and northern Syria, in order to prevent the Car-

Har-

rdka "fire ship" presumably denoted in origin a war-

Nabat on the Euphrates (Fraenkel, 1919, 121-43. See for Mesopotamian

The types of craft for both passengers and goods were very numerous. The Baghhdad parade of the early 5th/11th century, Abu '1-Kasim [q.o.], recites in his Hikaya a list of nineteen of these, including the kahr, zabab, sumayri, harraka, jayyara and marakib 'ammaliyya ('ammalda) "freight craft" (ed. A. Mez, Abukakhzai, ein baghdader Sittenbild, Heidelberg 1902, 107). As in the last example, some names are clearly descriptive, e.g. jayyara "flyer", a kind of skiff. Harr-
raka "fire ship" presumably denoted in war-

plays of Abu Djafar al-TusT (d. 460/1067). These

sajirs or 360/971), though neither their names nor their
depuities is first attested in the

K. Babawayh's (408-9); and the most

The four are listed in Ibn

Bn TaghrTbirdi, cited in Bosworth, (Eo.)

(455, Eng. tr. 485 ff.

The Arabian Sea and Indian Ocean shores.

The characteristic features of the mediaeval Arabic

Ocean-going ships have been given by Hourani as, first, the sewing-together of the planks rather than nailing (see above) and, second, the fore-and-aft set of the sails. Ibn Djabrory observed large barques or

djalibot) called a galiibah [q.o.] on the Red Sea coast which were stitched together with ice, i.e. coconut palm fibres (kinbar) (Rihla, ed. Wright and de Goeje, 70). Only from the 9th/15th century did nailed construction begin to be used on the Malabar coast of South India, possibly in imitation of the Portuguese warships (Hourani, Arab safarving in the Indian Ocean, 87 ff.).

A list of Arabic terms for ships used round the South Arabian coasts from later mediaeval times has been given by R. B. Serjeant in his The Portuguese of the South Arabian coast. Hodemi chronicles, Oxford 1963, repr. Beirut 1974, 132-7. Appx. II Arabic terms for ship-

ing. Here are to be found terms used elsewhere in the Islamic world, such as ghurab or grab; the gali(abaha, pl. galiab; and the barsha, according to Kindermann, 4-5, a long, covered boat, but also applied to large wars-

ships, as with the Ottoman baris (< Ital. bariga, bar-

za, see Kahane and Vitez, 98-9, n. 80) (cf. Imber, The navy of Siyyum, the Magnificent, 212-13). Con-

ected by observers of the early modern period with the Gulf of Oman and Indian waters was the baghla, lit. "mule", a large sailing ship (< Span.-Port. bael, bael, etc., yielding Anglo-Indian "buggalow" and possibly "budgeter", see Hobson-Jobson, 120, 123.

Most characteristic, of course, of these waters, for western observers, was the dhow, which Kindermann, 26-7, noted under daw or dawa, suggesting a Persian or ultimately Indian etymology; see for the
dhow, below, section 2. In modern times.

Bibliography: Given in the article. The works of Kindermann and al-Nukhayli list the types of ship alphabetically. See also Su'aTl Mdhir, al-Bahriyya fi Mi?r al-isla?m?ya wa-ahtharuhi al-b?kay, Cairo n.d. [1967], 147-238. (C. E. Bosworth)

2. In modern times.

See for this, MILAHA. 4. In modern times, to the

Bibi. of which should be added H. Ritter, Mesopotamische Studien. 1. Arabische Flussfahrzeuge auf Euphrat und Tigris, in Isl., ix (1919), 121-43. (Ed.)

Finally, it should be noted that in astronomy, Safina represents Argus, one of the eastern constella-
tions made up of 45 stars, the brightest of which is Sahayl or Canopus. On the other hand, Safinat Nuh denotes the Great Bear.

In this title posthumously in order to establish that the of-
fice of safar had come into being immediately follow-
ing the ocultation of the imam (Y. Khlajii, Dikr al-
safar, 140-1). The term safar as referring to these deputies is first attested in the K. al-Chayba of Muhammad b. Ibrahim al-Nu'mani (d. ca. 345/956 or 360/971), though neither their names nor their number is given. The four are listed in Ibn Bawawiy's [q.o.] Ikmal al-din (408-9); and the most detailed accounts of their activities are found in the K. al-Chayba of Ibn Djabr al-Tusi (d. 460/1067). These accounts are largely dependent on two works now lost, the Aẖbār Abi 'Amir wa Abi Djabar al-Åmraysiyy of Abu Nasr Hibat Allāh b. Ahmad b. Muhammad, known as Ibn Barniyya al-Kātib (fl. second half of 4th/10th century), and the Aẖbār al-uwkatil al-arba'â of Ahmad b. 'Ali b. al-Abbas b. Nuh al-Sifālī (d. ca. 413/1022).

The function of the safars as described in Twelver Shī'ī texts was to act as senior agents (waqīlas) of the twelfth imam and to oversee the affairs of the com-
community by coordinating the work of all other wa'iks in the 'Abbāsīd empire, collecting the dues owed the imām and his family and transmitting his orders and responses. According to Ibn Bābaywah and al-'Tūsī (who are followed by later authors), the four saffīs were:

a. Abū ʿAmr ʿUṯmān b. Saʿīd al-ʿAmrī of the Banū Asad (d. before 267/880). When he was only eleven years old he already served the tenth imām ʿAlī al-Hāḍī (d. 254/868) [see al-ʿAskarī]; later he became a confidant of his son al-Ḥasan al-ʿAskarī [q.v.]. Abū ʿAmr was a master of secret transportation and to transport it secretly to the imām. Before al-ʿAskarī died he appointed Abū ʿAmr as saffīr, an appointment subsequently confirmed by the twelfth imām from his place of hiding.

c. Abu ʿL-Kāsim al-Husayn b. Rawḥ al-Nawbakhtī (d. 18 Shaban 329/941), a master of secret transportation and to transport the money collected from the Shīfs and to transport it secretly to the imām. During this period referred to as the period of Sītāt or the Grief of the Twelfth Imam, ed. Fādil Allāh al-Zandjānī, Tabriz 1371, 41).

In addition to the genuine saffīs, Shīfe authors mention various pretenders who claimed the title for themselves. Among them are Abūd b. Ḥālid al-Karǧī, Muhammad b. Muṣayyir (the eponymous founder of the Nūṣayrīyya) and al-Shālmaghānī (E. Kohlberg, Belief and law in Imāmī Shīʿism, Variorum Reprints, Aldershot 1991, index, s.v.; H. Modarresi, Crisis and consolidation in the formative period of Shīfe Islam, Princeton 1993, part i, passim. (E. Kohlberg))

2. In diplomacy.

Here, saffī, pl. sufūrān, initially meaning envoy as well as mediator and conciliator, becomes ambassador or diplomatic agent (Turkish sefir, but elī [q.v.] is more commonly used; Persian safīr).

(a) In the central and eastern Arab lands. Diplomacy by means of emissaries existed from the early days of Islam. The Prophet employed envoys in dealing with the towns of Hijāz and Najd, dispatched messengers to Byzantium, Persia, Egypt and Ethiopia to invite them to join Islam, and received missions sent to him. Such diplomatic intercourse for military, political and religious purposes under the Rashīdūn caliphs and the Umayyads, most prominently in negotiating war and truce with the Byzantines. Diplomacy became more organised with the stabilisation of the Islamic empire under the ʿAbbāsīs, who exchanged envoys with heads of other states near and far, in order to discuss issues of war, peace and international alliances, to deliver good-will messages and, invariably, to spy. A famous instance
of these contacts (whose authenticity, however, is in some doubt) was the exchange of embassies between Charlemagne and Hārūn al-Rašīd, in which the former reportedly sought a coalition with the latter against Byzantium [see IFRANDJ]. Another line of dialogue developed through envoys between the caliph in Baghdad and provincial governors who had become autonomous, such as the Ayyūbids, and between the caliph and Islamic states not under his sovereignty, such as the Fatimids and Umayyads of Spain. With practice came the criteria for choosing state emissaries (prudence, courage, charm and, of course, dependability were prerequisite), patterns for conducting missions and modes of entertaining foreign envoys, as well as an elaborate diplomatic vocabulary. Al-Kalkashandi’s [q.v.] 9th/16th-century multi-volume manual for scribes in the Mamluk chancery, the Subh al-a‘lāgh, is an impressive mirror of these sophisticated diplomatic standards.

The spread of European commerce brought European consuls to the Levant and North Africa from the 7th/13th century [see consul], men who discharged a variety of diplomatic functions. In the 10th/16th century, as the Arab lands came under Ottoman rule, the region’s locus of international diplomacy shifted to Istanbul [see E.OT]. Only Morocco, remaining an independent sultanate, continued to conduct international relations independently through correspondence and the occasional dispatch of emissaries. Until the late 18th century (when the Ottomans began setting up resident embassies abroad), official contacts with non-Muslim states took place mostly in the region itself, through foreign consuls and messengers. Muslim envoys were sent out quite infrequently, and then only on brief missions, often with limited objectives.

The establishment of new Arab states following the First World War marked a new stage in the region’s diplomatic history. During the interwar period, relations between these states gradually assumed a formal nature, an emphatic sign—one among many—of their new status. This was so especially in the 1930s, with the attainment of greater or full independence from foreign control; the April 1936 Saudi-Iraqi Treaty of Friendship and its Saudi-Egyptian counterpart in March 1937, both establishing diplomatic relations between the parties, are typical instances of this trend. Simultaneously, with the gradual departure of European powers from the region, their domination gave way to mutual diplomatic representation—as specified e.g. by the 1930 Anglo-Iraqi treaty and the 1936 Anglo-Egyptian treaty, both providing for a replacement of British High Commissioners by an exchange of ambassadors. Modern diplomatic protocol, terminology, and ranks, having been adopted by the Ottomans during the 19th century, were now readily applied.

Safīr became the technical equivalent of ambassador (fem. safīra, ambassadress or an ambassador’s wife), and came to be used for other functions in construct titles such as safīr muṣawwad (ambassador plenipotentiary), safīr faṣaṣa l-‘lada (ambassador extraordinary), etc. More ranks and functions were formed by additional terms: muṣād (or mandāb), for envoy or minister; muthāfi for counsellor, sikratīr for secretary, muḥak for attaché, and kātm bi-‘manāl for chargé d’affaires.

(b) In Muslim Spain. In the Arabic sources of al-Andalus, we also find some words derived from the root s-f-r, meaning “to travel on mission on behalf of…” (stem I) [as in al-Makkarī, i, 645-6]: “to make somebody travel”, “to send somebody as an ambassador” (stem II); “to be sent on mission/embassy” (stem V); safīr (pl. sufera) “ambassador” (as in Ibn Kuzmān, 38/4; Vocabulista: “mediator”, “nunciator”); sifār (pl. -āt) “the charge of mediator”, “embassy”, “post or functions of ambassadors”. The usage of the words derived from the root s-f-r alternates—in a proportion and distribution not yet elucidated—with the words derived from the roots r-f-l (“to send a messenger”, etc.) and w-f-d (“to go somewhere on behalf of somebody”, etc.).

These words, and their contexts, throughout the history of al-Andalus, exhibit the fact that connections between individuals and groups were established by a ‘messenger’, and that relations were engaged and accepted by all the Andalusi states; that means that more or less intensive and institutionalised diplomatic activities were established by an “ambassador” with the charge, the post, or rather the functions of representing the interests of a power, sporadic or continually, circumstantial or more specifically.

Although precise analysis on this aspect has not yet been done, we cannot deduce from the sources that the sifār was an institutionalised charge, like a wilāya or khutta, but most probably was an “activity”, in the sense that a person was safīr only while carrying out his mission. There is no indication in the sources on al-Andalus of the existence of permanent embassies.

Embassies were frequently assigned to those who knew another language in addition to Arabic, such as the dhimmīyyūn: the nasārā (Christians of al-Andalus) and the Jews. Amongst the nasārā were the Andalusian bishop sent by the caliph of Cordova ‘Abd al-Raḥmān III al-Nāṣir to Ramiro I of Leon (Ibn Hayyān, Muktabāt, v, 350), and the bishop Recemundo, known as Rabī’ b. Zayd [q. v.], sent by al-Nāṣir to Germany in 955-6. The missions of some Andalusi ambassadors also were sent by the Christian kings of the North to the Islamic territories and, on some occasion, were alternate ambassadors, such as the kānim Sisna Davidiz, who was initially the messenger of al-Mu’taṣid of Seville to the court of Leon and then became the ambassador of the Christian kings to the mamlūk al-sawāfi, for example to the amīr ‘Abd Allāh (The Tibyān, 226, n. 241).

Amongst the Jews were Ibn Shālīb al-Yahūdī, ambassador of Alphonso VI of Castile to al-Mu’tamid of Seville [q. v.], who killed al-Yahūdī (it was a permanent risk for ambassadors); Ibrāhīm b. al-Fakhhkār al-Yahūdī, well-known poet in the Arabic language, was the ambassador of Castile to the Almohad court. Other Jews were also sent by the Andalusian kings, such as the powerful Cordovan Jew Hasdāy b. Shaprūt, who was the outstanding vizier of the caliph ‘Abd al-Raḥmān III al-Nāṣir, and was entrusted with missions to Barcelona (940), Leon (in 941 and 955) and Navarre. He was also assigned the task of receiving the Byzantine Constantine VIII’s ambassadors in Cordova (944) and the Saxon emperor Otto I’s ambassadors (956).

Some outstanding Muslim personalities in al-Andalus, renowned for their culture and eloquence, were also designated as ambassadors, such as the Cor-
dovan poet al-Ghazal, sent by the amir Abd al-Rahman II to the Vikings (madjus), and to Constantinople; and the Granada vizier and polygraph Ibn al-Khatib [q. v.], who went there to negotiate diplomatic missions to the Mamluks [q. v.] of Fâs. Other person¬
nalities renowned for their religious prestige were also sent on missions. For example, the two Ibn al-Arabis were entrusted with obtaining the recognition of the Almoravid amir Yusuf b. Tashhuf by the Abassid court. Merchants sometimes played the role of ambas¬
dassadors, such as the Granadan al-Bunyûlî, charged by the Nasrid sultan to get help from the Mamlûk sultan al-Zahir, in 843/1441.

It is useful to classify the Andalusian embassies ac¬
cording to their destination, whether within Al¬
Andalus or outside it. The destinations of the external embassies are to be classified as either to Dâr al-Islâm (the other Muslim territories) or to Dâr al-harb (non-Muslim territories). The internal embassies were exchanged either amongst the different administrations or between the administration and the subject vice versa. Those sent by the Almohad court in Marrâkush to every part of its empire. The external embassies, well-known but not yet analysed, excepting those of the Umayyad period (Levi-Provençal; El-Hajji), show that permanent relations between Al¬
Andalus and the rest of the Muslim world existed as, for example, with the Abbâsiâs, Egypt and finally with the Turks, but especially with the Maghrib. There are many references to missions which were sent from al-Andalus to the Christian north of the Iberian Peninsula, to the Ifnandia and other European parts, and especially to Byzantium.

Andalusian sources point out the luxury and ostenta¬
tion of the receptions given by some Andalusian sovereigns for foreign ambassadors, with the purpose of political propaganda (Granja, Embajadas).

3. In Muslim India.

Elaborate rules were laid down in mediaeval India regarding the qualifications and protocol duties of am¬
bassadors. Fâkhr-i Mudabbir quotes the following hadîth of the Prophet as the guiding principle: "When you send an ambassador to me, he should be of good reputation, handsome and of good voice." (Abd al-harb wa l-'majhâd, ed. A.S. Khânânsî, Tehran 1936/1967, 142). The Dîhil Sultans received envoys in such awful atmosphere of dignity and grandeur that, according to Dûzâdzîânî, many of them fainted in the darbâr (Tabakdt-i Ndsin, Castella 1864, 316-19; Barani, Târîh-i Firuz-Shâhî, Castella 1862, 30-3). Envoys were sent for different purposes—diplomatic, religious, economic, cultural etc.—and Abu l-Fâdil refers to the spiritual and temporal objectives of ambas¬
datorial functions (Akbar-nâmâ, tr. Beveridge, ii, 262).

Envoys to and from the caliph. Envoys were sent to secure letters of investiture (manșâh) from the Abbâsîd caliphs. Iltimûsh, sent Khîyîyar al-Mulk Rashâd al-Dînil Abû Bakr Habash to Baghdâd, and twice Khâdiîyî al-Dînil Ǧasan al-Šâghânî [q. v.] came to Iltimûsh as envoy of the caliphs. When the caliph granted investiture to Iltimûsh, legalising the status of the Dîhil Sultanate, he celebrated the occasion with great éclat. On another occasion, the caliph sent an envoy, Kâdi Djâlâl Urûs, with a copy of the Safnât al-khulafa', allegedly containing an autographic inscrip¬
tion of the caliph al-Ma'mûn. With the fall of Baghdâd, contact with caliphal authority there came to an end, but after many enquiries, Muhâmmad b. Tughûk established contact with the fârînânt Abbâsîs in Egypt. In 744/1343 he sent Hâdîddî Râdjâb Bûrkûtî to the caliph requesting a manşâh. When Hâdîddi Saîdî Saîrsaîî, Sayyid Ziyâd, Muhâmmad b. Khâlwârî and Muhâmmad Sîfî brought the inves¬
titure, the sultan went out barefoot to receive them. The caliph later sent Shaykh al-Shoyûxîh Rûkân al-Dînil and Maâbudân-zâda Chîyîlî al-Dînil Muhâmmad as his envoy to the sultan. At the Maâbudân-zâda was the grandson of the caliph Mustânsir bîllâh, he was lodged at the palace of âlî al-Dînil Khatîbî and 400,000 dinars were sent for washing his head (Ibn Bâttûtâ, iii, 261-2, tr. Gibb, iii, 680-1). In 754/1353 Shaykh Shîhâb al-Dînil Ahmad Sâmit brought an inves¬
titure patent for Firûz Shâh Tughûk, and a new one arrived in 766/1364. The sultan sent to the caliph details of his benefactions, religious, endowment, public works through Mahmûd Shams Kur'd Kâdi Namîd al-Dînil Kuraşhî and Khâ'îda Kâfor Khâlwârî, and Maâbudî then brought back mandates from the caliph (Strats-î Firuz-Shâhî, ms. Bankipur). At a later date, the Mughâlds did not recognise the Ottomans as caliphs, but in 1785 Tîpî Sûltân [q. v.] sent his envoys to Istanbul to obtain an investiture from the Sultan-
caliph.

The Mongol period. Both Cinçiz Kânî and his rival the Khârazm-Shâh sent their envoys to Iltimûsh seeking his support. In 1246 when a Mongol commander attacked India, Shaykh Bahâ' al-Dînil Zakariyyâî of Multan, was sent to negotiate peace. Two years after the fall of Baghdâd, in 658/1260, emissaries from the Mongols visited India and were accorded a royal reception by sultan Nâsir al-Dînil Maâbudî (Tabakdt-i Ndsin, 317-18). Envoys to and from the Khâlnân. Argûn, Ghâzân and Muhammad Oldjeytî Khudâbânda sent their envoys to the Dîhil court, and the great vizier Râqîd al-Dînil Fadl Allâh [q. v.] came as an envoy to 'Alî al-Dînil Khâldîjî (Nîzami, Rashdî al-Dînil Fatî al-Dînil and India, in Proceedings of the Colloquium on Rashdî-at-Dînil Fadl Allâh, Tehran 1971, 36-53). Rashîd al-Dînil came again as an envoy to the court of Mubârâk Khâldîjî (A'nî-î Akbarî, ed. Sir Sayyid Ahmad Khân,
ii, 200), and Muhammad b. Tughluq sent and received envoys from Sultan Abd Sa'id.

Envoys to and from neighbouring countries. According to Barani, ambassadors from distant lands came to the court of Balkhan. During the time of Muhammad b. Tughluq envoys came from 'Irak, Syria, China and Ḫwealthaz, and the Chinese ambassador, Tursi, came with a large retinue; in return, Muhammad b. Tughluq sent the Amir Khawd Harawi as his envoy to China.

Envoys to the Ottomans. Muhammad Shah Bahmanī III of the Deccan (867-97/1463-82) was the first Indian ruler to exchange envoys with the Ottomans, and Mehemmed II Fāṭīḥ sent Mawlānā Al-din-oghlu Mehmed Celebi as his envoy. According to Baranī, ambassadors from distant lands came with a large retinue; in return, Mehemmed II Fatih sent Mawlana Afzal Allah Khan Uzbek as his envoy to the Shāh. The Ottomans were, however, unable to reach there. Nevertheless, Turkish records say that Sidi ‘Allī Rā’is, the Ottoman admiral, carried a letter from Hûmâyûn to Sûleymân the Magnificent in which Hûmâyûn addressed the Sultan as “the Khalīfa of the highest qualities.” The Ottomans used the terms Hind elcis or elçiye-i Hind to denote Mughal ambassadors, but no details are available in the Indian chronicles about these Mughal envoys. The envoys of the Ottoman governor of Yemen were, however, treated with scant respect by Akbar (N.R. Faruqui, Mughal-Ottoman relations, Delhi 1989, 20 ff.).

Envoys to and from the Uzbeks. Akbar was afraid of Uzbek power and treated them with suspicion. However, in 979/1571 ‘Abd Allah Khân Uzbek, ruler of Transoxiana, sent an embassy to Akbar.

Envoys to and from Timūrid and Safawī Persia. The sultans of Golkonda, Bidjapur and Ahmadnagar sent ambassadors to the court of Shāh Tahmâsp I, whilst in 847/1443 Shāh Rukh’s ambassador ‘Abd al-Razzāk had been received by the Hindu ruler of Vijayanagar, King Devendra.

Hûmâyûn, who was beholden to the Safawīs for help, developed contact with them, and during the time of Akbar, the ambassador came and went to Persia. In 1004/1598 the Emperor sent Mirza Diya’ al-Din-Kâsî and Abu Nâṣr Kâfî to Shâh ‘Abbâs, and according to Iskandar Beg Munghi, they were received with honour (tr. R.M. Savory, History of Shâh Abbas the Great, Boulder, Col. 1978, ii, 705-6). Abu’l-Fâḍî’s account of the reception of these envoys issold and pedantic (Akbar-nâma, tr. iii, 1112).

Several envoys were sent by Shâh ‘Abbâs to Djahângîr. In 1020/1611 Yâdgâr ‘Ali Tâlîgh came to mourn Akbar’s death and to congratulate Djahângîr on his accession. When Yâdgâr ‘Ali returned to Persia, Djahângîr’s envoy Khân ‘Alam accompanied him. In 1024/1615 a second Persian embassy headed by Mustâfâ Beg came to Djahângîr’s court with huge presents, including European hounds which Djahângîr had asked for. In the following year Muhammad Rûdî Beg came to Djahângîr to obtain monetary aid against Ottoman Turkey and to bring about an amicable settlement between Djahângîr and the Shâh’s states of the Deccan. For envoys to and from Shâh Djahângîr, see Saksena, History of Shahjahan, Allahabad 1973, 210-32.

Queen Elizabeth’s envoy to Akbar. Elizabeth of England sent an envoy to Akbar in 1583 with a letter which was “the earliest communication between the government of India and England” (V.A. Smith, Akbar the Great Mogul, Oxford 1919, 229).

Akbar’s envoys to Europe. Akbar desired to send envoys to Philip II of Spain recommending universal peace and harmony; a diplomatic mission, consisting of Sayyid Muzaffar, ‘Abd Allâh Khân and Father Monserrate was dispatched to Lisbon, but was unable to reach there.

Jesuit missions at Akbar’s court. Akbar’s interest in religious debates led to the arrival of several Jesuit Missions at Akbar’s court in 1580 and after, and in return, Akbar sent ‘Abd Allah Khán as his envoy to Portuguese Goa (see E. Maclagan, The Jesuits and the Great Mogul, London 1932).

British envoys at Djahângîr’s court. Djahângîr welcomed William Hawkins and Sir Thomas Roe, but refused to conclude a commercial treaty with England. Hawkins was, however, persuaded to remain at the court as the resident ambassador.

Envoys of the Deccan states and provincial Indian states. Three types of envoys have been identified in regard to the Deccan of the 10th/16th century: (a) ad hoc envoys, called rasîl, who were sent to offer congratulations or condolences; (b) the hadjîb-i mukim, literally, attaché; originally assigned to the army of friendly powers; and (c) waqitis or permanent ambassadors accredited to certain foreign powers (H.K. Sherwani, History of the Qutb Shahi dynasty, Delhi 1974, 218-19). Provincial kingdoms like Djawnpur, Bengal, Mâlwâ and Gudja rât sent envoys within India with the object of winning support in their conflicts with the adjoining states, but it is only regarding the Deccan that one finds contact with outside powers. In Gudja rât, the ambassadors were mainly concerned with the activities of the Portu-

tuguese.

Envoys to the West during the 18th and 19th centuries: Tipû Sûlûn of Mysore sent his envoys to France and Turkey; Louis XVI received his envoy with honour, but refused to enter into any alliance against the British. One of the last Mughal Emperors, Akbar Shâh II, sent Radjâ Râm Mohan Roy to London in 1827 to plead his case for an increase in his pîshkâsh or pension.

SAFITHA, a place in western Syria, situated in the Djabal region. This last becomes lower as it falls southwards, with a large gap commanded to the north by Safîtha and Hîn al-Akrâd [q.v.] and to the south by ‘Akkâr and ‘Irâk [q.v.]. The mountains of the ʿAlawîs fall southwards into the Safîtha depression. Safîtha was the ʿArqamat or of Byzantine authors, Castrum Album or Chastel Blanc of the
Latin ones, and is the main place in the district, with its fortress called in Arabic texts Burdj Safitha; this last lies to the east of the present village and dominates the fort of the Djabal Baharî, by means of which Himis [q.v.] is connected with Tarabulus al-Sham. From Antiquity, the castle of Safitha commanded the route connecting Hamâ [q.v.] and Tarûtus on the coast, i.e. the passage from central Syria to the Mediterranean. Situated on a basalt peak at an altitude of over 400 m/1,312 feet, it protected the lands to the north in mediaeval times from the Nizârî Ismâ‘îlîs. The region around Safitha was a fertile one, with olives grown there from classical times, and with vines, figs and white mulberry trees for silk worms grown there in mediaeval times.

The fortress of the mediaeval Christian town of Safitha was a strong rectangular donjon with rounded angles, originally protected by double defensive walls. The The Templars' aim was to control the gap between Hims and Tarabulus in the hinterland of the Knights Hospitallers' territory. The plan of the castle resembled that of Markab [q.v.] in being elliptical, originally with a double wall, but later with a single wall with rectangular salients, as at Tarûtus and Athlîth [q.v.], and with a moat 15 m/49 feet deep and 13 m/42 feet wide. The stones were dovetailed together and linked by iron crampons sealed with lead. Some modifications to it were made by Louis IX (St. Louis) when he claimed himself as the chef-lieu, for skiing in winter and with an open-air bathing pool.

Of later history, it is recorded that in 1270/1854, a petty chieftain, Isma‘îl Bey, seized Safitha and proclaimed himself muqarr [q.v.] or governor acting as an "Old Man of the Mountain", which provoked a revolt of the Muslims of the region; four years later, he was murdered by a relative. After this, Safitha was integrated into the Ottoman empire.

The present-day village is situated on the site of the mediaeval fortress. In the early 19th century, the kada' of Safitha was one of the constituents, with al-Markab, Tell Kalkh, 'Umruniya and Tarûtus, of the sancak of that name. In 1916 it had 2,500 inhabitants, including 1,500 Nusayrîs [see NUSAYRIYYA] and 850 Syrian Orthodox. In 1920 the administrative district of Safitha comprised 202 villages, with 41,500 people, including 20,000 Nusayrîs, 10,000 Muslims, 6,500 Greek Orthodox, 4,500 Maronites, 300 Greek Catholics and 200 Protestants. In this same year the kada' of Safitha, with the town as its chef-lieu, was detached from the sancak of Tarabulus al-Sham, and then made part of the State of the 'Alawîs established in 1922 as part of the federation of Syria. In 1945 the kada' became part of the muhâjaza of the 'Alawîs. After 1954, the local population, essentially peasant cultivators, supported the Parti Populaire Syrien. Local activities include carpet weaving and the cultivation of cotton and tobacco. The village now surrounds the castle and its dominating donjon, and its houses are essentially built from stones taken from the castle's enceinte. The church of St. Michael in the donjon is still used by the Greek Orthodox members of the population. In the 1960s Safitha became a tourist centre, for skiing in winter and with an open-air bathing pool.

SAFIYYA — SAFIYYE WALIDE SULTAN

Saitha — Safiyye Walide Sultan 817

SAFIYYA, b. HUYYAY B. AKHTAB, Muham- mad's eleventh wife, was born in Medina and belonged to the Jewish tribe of the Banu '1-Nadir [see al-Nadir]; her mother Barra bt. Samaw'al, the sister of Rifa'a b. Samaw'al, was of the Banū Kurayza [q.v.]. Her father and her uncle Abu Yāsir were among the Prophet's most bitter enemies. When their tribe was expelled from Medina in 4 A.H., Huyayy b. Akhtab was one of those who settled in Khaybar [q.v.], together with Kināna b. al-Rabi', to whom Safiyya was assigned, or actually given, to Diyyah b. Khuhfa al-Kalbi, but when Muhammad saw her he was struck by her beauty, and threw his mantle over her as a sign that he had chosen her for himself. He redeemed her from Diyyah against seven head of cattle, and gave her the option of embracing Islam. Her husband was condemned to a cruel death by Muhammad for having refused to give up the treasure of the Banu '1-Nadīr. The nuptials were celebrated with haste and with a modest wedding feast, either in Khaybar itself or on the way back to Medina. Safiyya's dowry [see mahār] consisted of her emancipation. Her position as a wife, which was questioned, was established by the veil of hidāba [q.v.] being imposed on her and her receiving a portion of the Banu '1-Nadīr's bounty.

In Medina, Safiyya received a cold welcome; ʿAṭila [q.v.] and Muhammad's other wives showed their jealousy with slights upon her Jewish origin. She gave the Prophet's daughter Fāṭima [q.v.] gold from her earnings, which may indicate that the two were allies in the politics of Muhammad's harem. Doubts about Safiyya's commitment to Islam and the suspicion that she would avenge her slain kin are recurring themes in the numerous biographies of her composed through the centuries. In these stories, the Prophet (or ʿUmar) admonishes the doubters and re-affirms the quality of her Islam, despite her being a Jewish convert. During Muhammad's last illness, Safiyya expressed her devotion to him, and was criticised by the other wives.

Safiyya's marriage to the Prophet was predicted in a dream while she was still married to Khunān, and her husband beat her for desiring another man. The miracle and her suffering for Islam and the Prophet, as well as her reputation for crying won her a place in Šūfi works. She appears in all the major books of ʿadīth and indices of transmitters, although she related relatively few traditions compared to ʿAṭila and Umm Salama [q.v.]. A number of events in her life serve as legal and customary precedents.

In 35/656, Safiyya sided with ʿUthmān [q.v.]; while she was besieged in his house she made an unsuccessful attempt to reach him, and she used to bring him food and water by means of a plank placed between her dwelling and his. When ʿAṭila asked her to be present at Uthmān's last interview with ʿAlī, Ṭalha and al-Zubayr, which took place in her house, Safiyya went, and tried to defend the unfortunate caliph. She died on 20/70 in 87, during Muhammad's caliphate, leaving a fortune of 100,000 dirhams in land and goods, one-third of which she bequeathed to her sister's son, who still followed the Jewish faith. Her dwelling in Medina was bought by Muṣfīrwa for 180,000 dirhams.

(V. VACCA-[RUTH RODED])

SAFIYYE WALIDE SULTAN (Cecilia Baffo), Ottoman queen mother, born in Venice in 1550, died in 1605/605.
The daughter of the Italian Baffo, governor of Corfu, when she was fourteen years old, while travelling between Venice and Corfu on the Adriatic Sea, she was captured by Ottoman pirates. On account of her beauty, she was taken to the palace of prince Murâd, grandson of Süleyman and governor of the sanjak of Manisa. In the Manisa palace, she became a Muslim, learned Turkish and was trained in palace manners. In 972/1565, she was presented to Murâd. She gave birth in 973/1566 to prince Mehemmed, who became the first great grandchild of Süleyman and was named by him, “striking hands together”. The parallel root word is found in sura VIII, 35, with a comparable meaning. Evidently, striking the hands together can only be used as an expression of acceptance once an offer is made to most schools, excluding the Shafi’is, who require immediate acceptance, have made a provision that the two parties can cancel the contract providing they are still physically at the place where the deal was negotiated (dā’ār al-magālis); but once the contract is sealed, the deal is final. It is imperative to add that the expression of will, under these conditions, can be in any form, whether by striking the hands together or verbal affirmation, providing it conveys the clear intention.

SAFVAN B. SAFVAN AL-ANŞARî, Arab poet of the 2nd-3rd centuries A.H. known for his ideological poetry in support of the Mu‘tazila [q.v.]. Al-Dżâhîz [q.v.] is the only source for the few bits of information on his life and the sparse samples from his poetry that we have. The biographical snippets show him in Multan at the court of the governor of Sind, Dâwid b. Yazid al-Muhallabi, who held this office from 184/800-205/820 [see MUHALLABIS, toward the end]. In all of them he is al-Dżâhîz’s authority on elephants, quoting poetry by the elephant expert Hârûn b. Mûsâ al-Azdî mauâtâhah; describing what kind of ruses this man used in fighting against war elephants; and indicating how the Indians trained these animals (Hâpanan, vî, 76 [read, with Pellat, zewedar for râda‘], 77-114-15). As for Safvan’s poetry the surviving pieces show strong support for Wâsiî b. ʻAtâ‘, founder of the Mu‘tazila (d. 131/748-9 [q.v.]), and other leaders of the movement and equally strong animosity against the poet Bashhâr b. Burd (d. 167 or 168/784-5 [q.v.]), after the latter had broken away from Wâsiî’s circle. Since some of the lines in praise of Wâsiî seem to speak of a contemporary, Safvân must have been of a ripe old age, when he joined the Multan governor, unless, of course, one assumes two different Safvans. However, in addition to his name, his apparent interest in natural history, which comes through in both the early poetry and the later reports, would be an argument for the identity of the two personages.

His most famous poem is the glorification of earth, a counter-poem against Bashhâr’s apotheosis of fire, which also includes a pro-Mu‘tazili faqr and a hidjâ against Bashhâr and his sect, the somewhat shadowy extremist Kâmilîyya Şî‘a (Bayânî, i, 27-30; 33 lines, ta‘wil, rhyme -Cdi). Shortened versions of this poem, clearly quoted from al-Dżâhîz, appear also in al-Baghdâdî (d. 429/1037 [q.v.], al-Farh ba‘n al-firâk, 39-42, in the section on the Kâmilîyya (20 lines), and in Abu ‘l-Hasan ‘Ali b. Yusuf al-Ḥakîm (8th/14th century), al-Dâwâ‘ al-mu‘tahabâbika, 25-27, where it is quoted for the enumeration of minerals and ores it contains (13 lines). Of similar content is a shorter poem (Bayânî, i, 32, 9 lines, ta‘wil, rhyme -Cdû). The earth-fire controversy has been seen as an early Mu‘tazili-Şî‘i polemics (Nyberg in EP, s.v. AL-MA‘TAZILÎ) as well as a Šu‘ûbi attack by Bashhâr, defending the Zoroastrian holiness of fire, with a counter-attack upholding the claims of the earth. The context(s) of these polemics became meaningful in the 2nd century is none too clear. Another poem defending Wâsiî against Bashhâr’s hidjâ* also mentions the missionaries that Wâsiî sent out (Bayânî, i, 25-6; 22 lines, ta‘wil, rhyme -3ri); this was interpreted by Nyberg, loc. cit., as indicating the existence of a pro-Abbasid network of propagandists, but was probably not more than a religious undertaking [see AL-MA‘TAZILÎ, here vii, 783b-784a, and van Ess, ii, 386-7].

The remaining fragments are: two lines on the
SAFWAN AL-ANSARI — SAFWAN B. AL-MU'ATTAL

SAFWAN, an Andalusian poet, was born in Murcia when the town was ruled by Ibn Mardamsh (d. 567/1172), but the major part of his life witnessed Almohad times (see the studies of Kasim, Abu Ridjal b. Ghalbun, Abu Abd Allah b. '1-Kasim b. Idris, as well as the material collected in Ibn Durayd, ed. Harun, 310; Ishtiktak, d. 634/1236). He studied with his father Abd al-Kadir Mahdad, who taught him Tawil (rhyme -Cdi). Ibn al-Abbar, ii, 117, no. 198; Makkan, ii, 10-4, no. 3; Ibn Sa'd, al-Mugribi fi hilal 'l-Mugrib, ed. S. Dayf, Cairo 1953-5, ii, 260-1, no. 533; Ibn al-Zubayr, Sita al-Sila, ed. A. Härün and S. A'rab, Rabat 1993, no. 120 (the source is Ibn Furqan's Dhayl). Ibn Sa'd, Ruya al-mubarrizin; Ibn Al-Abd al-Malik al-Marrakhi, al-Dhayl wa 'l-Ahdhdt wa 'l-Dhayl; Ibn al-Khatib, al-Zubayr, xvi, 321-4; Ibn al-Khatib, al-Dhayl wa 'l-Ahdhdt wa 'l-Dhayl); Ibn al-Mukhtadab min al-Adham, ed. M.A. 'Inan, Cairo 1973-7, iii, 349-59, Ibn Shakir al-Kutubi, Fa'at al-wujayf, ed. 'Abbas, ii, 117, no. 198; Makkarri, Na'f al-tib, ed. S. Dayf, Cairo 1953-5, iii, 527 (no. 6769); Ibn Ibrahim al-Bahr, Rabat 1974-83, vii, 361-72, no. 1046; Makhluf, Shusharat al-nar, Cairo 1950-2, i, 161, no. 496; Pons Boigues, Ensayo bio-bibliográfico, 256, no. 210; Brockelmann, P., 322, S. I, 482; R. Kahlbä, Mu'jam al-ma'allifin, Damascus 1957-61, v, 19-20; A. González Palmera, Historia de la literatura arábiga española, Barcelona 1928, 191; M. Gaspar Remiro, Historia de Murcia musulmana, Saragossa 1905, 259; P. Guichard, Les musulmans de Valence et la reconquete (XIe-XIIIe siècles), Damascus 1990-1, esp. i, 127-32.

SAFWAN B. AL-MU'ATTAL (the father of the t is confirmed in Ibn Durayd, Iğilık, ed. Härün, 310; occasionally wrongly al-Mu'attal) was a Companion of the Prophet Muhammad. His year of birth does not seem to be confirmed, and he is mentioned as having died a martyr's death during the Arab's conquest of Armaiyin in 17/638 (cf. Tabari, i, 2506) or 19/640 (cf. Ibn Hadjar, Iṣba'a, iii, 441). Other reports have it that he met his death at a much later date in the year 59/679 (cf. Khalila, TaRiyik, ed. A.D. al-Umari, 226-7) or

date-palm (Hayawdn, vii, 78; mutakārīb, rhyme -21u); one line characterising Wasil basit, i, 22; basit, rhyme -aksi; one line in praise of Wasil's zuhd (Baydn, rhyme -aki); one line in commemoration of al-Husayn b. Hashim in a dream interceding on Safwan's behalf, and from then onwards Safwan was never to have again financial problems. Safwan corresponded with the poet Muhammad b. Idris b. Mardj al-Kuhl (d. 634/1236) (Na'f al-tib, v, 57-9). The most noted of Safwan's pupils was Abu 'l-Rabi' b. Sālim al-Kalāfi. Safwan died young, aged 38, and his father recited the funeral prayer over him.

(S.A.R. FIERRO)
He is noted only for his poetic version of the animal fable collection, originally translated into Arabic by Ibn al-Mukaffa', Kaila wa-Dimna [q.v.]. This version he called Durat al-Iskam fi amthd al-Hunud wa-'Ijikam, and he completed it on 20 Dhumad 640/15 November 1242 (according to the Vienna ms.) or possibly some 25 years later (according to the other extant ms. of Munich); see Brockelman, S, 1, 234-5.

Bibliography: Given in the article. (Ed.)

He was born in Lahore on 10 Safar 577/25 June 1181 according to the most generally accepted report. He commenced his studies in Ghazna, first under his father who was a mutakallim, then under a number of scholars, most notable of whom was Niẓām al-Dīn al-Maṣḥūf (q.v.) [211]. In further pursuit of knowledge, he travelled between the years 605/1209 and 615/1220—9 to Mecca, Medina, Aden and Makdiṣū. The notice by his contemporary, Yākūt [q.v.] (Udāba, iii, 211-12), which ends in the year 613/1216-17, clearly shows that Saghani had by that early time acquired enough fame and respect to warrant his inclusion in a biographical dictionary. In Safar 578/1181 he came to Baghdad for the first time (see his own Ṣūraj, under the root š-r), in the editor's introd., and two years later was sent to India by the caliph al-Nāṣir [q.v.], where he stayed for several years. He came back to Baghdad in 624/1226-7, only to be sent, in the same year, once more to India, this time by al-Mustanṣir [q.v.]. Impoverished there, he managed to get back to Aden in 630/1232-3 and then to Baghdad in 637/1239-40. In his later days he taught at the Marzubāniyya ribāḥ, but resigned his post in 640/1242-3 when he came to learn that the shaykh of this ribāḥ had to be a Ṣāḥib'ī (Ibn al-Fuwāṭ, al-Nawārid al-dāmar, Baghdad 1351/1932-3, 263); hence al-Musta'sīm entrusted him with the Hanafi madrasa, Tutushiyya, under the root q.v., and it is in this period that he wrote his Masār al-anūr wa-al-Ubāb. His death is most widely reported to have been on 19 Sha'bān 650/25 October 1252.

Al-Saghani's literary contribution was predominantly in the field of lexicography. By his time, it was deemed no longer possible for a lexicographer to investigate usage among the desert Arabs, due to the so-called loss of the earlier "purity" in their language. Al-Saghani, however, seems to have made up for this major handicap by concentrating on the shortcomings and errors of his predecessors in riwāya, taḥṣif, attribution of poetry, etc. Aided by his vast knowledge (cf. his list of sources in al-Ubāb, i, 7-9), he produced three of his major works that can be seen in the light of the above. These are: (1) al-Takmīla wa l-♯ayy al-♯ila (ed. A.A.A. al-Tahwīlī et alii, 6 vols., Cairo 1970-9), a supplement to al-Djawhari's al-Šībāh, which comprises linguistic usages overlooked by al-Djawhari and excessive corrections of his errors; (2) Maqṣūm al-bahrayn (Brockelman, S, i, 614, 1978), vii, 219), which incorporates al-Šībāh, al-Takmīla, and al-Saghani's own Ṣūraj [q.v.], in which he amended still further errors of al-Djawhari, and (3) al-Ubāb al-ṣākhīr wa l-lubāb al-fākhrī (ed. Y.M. Ḥasan, i, Baghdād 1978, and ed. M.H. Al Yāsīn, Baghdād 1397/1978 ff.) in which he only got as far as b-k-m before he died. This book, according to al-Suyūfī (Baghya, Cairo 1964, i, 519) is the greatest linguistic treatise after the era of al-Djawhari, along with Ibn
Sida’s al-Muhkam. It is indeed in this work that al-Saghani’s mastery of the sources and his vast ricâyda are most clearly manifested, and in his introduction (pp. 12-19) he lists but a few of the more glaring errors of al-Azhari in his book (over 1,000 in all), al-Djawhari in his al-Síhâh (over 2,000), and Ibn Fâris in his al-Mudnâjil (over 500), and ridicules Ibn al-Sikkit’s Isâh al-manâtik as needing an isâh of its own, and Ibn ʿAbâd’s al-Muḥšî as having comprised (ḥâdâ) error and ṭarîf.

Another obvious linguistic interest of al-Saghani is demonstrated by his work on patterns, as in his K. ʿirrâfâ (ed. A. Khan, Islamabad 1977), K. al-İftâfl (ed. A. Khan, Islamabad 1977), and Nasîk al-sâdîyân fîmâ ḍâ'a ʿala wazn faʾlān (Brockelmann, S I, 615).

Similarly, demonstrated by his work on patterns, as in his K. al-İftâfl (ed. A. Khan, Islamabad 1977), and Nasîk al-sâdîyân fîmâ ḍâ'a ʿala wazn faʾlān (Brockelmann, S I, 615). The published titles show that al-Saghani, despite a certain pattern which any general lexicon would have, but listed alphabetically under their roots.

To a lesser extent, al-Saghani contributed to the realm of ṭâbîhât, and his main work here is Mughârî al-nawâr al-nabâwîyya ʿala šahîh al-ṭâabîr al-muṣâlâfawiyâ (printed several times in Leipzig, Istanbul, and Beirut). The importance of this treatise, which integrates the two and other (sometimes contradictory) concepts of childhood influenced the everyday life of children in Muslim societies.

While in its mother’s womb, the child is called ḍânîn (foetus). The general term for “child” is wâlîd, and other terms have special shades of meaning, e.g. nadjîl (“progeny”) and farât “a child who dies before reaching the age of majority.” Lane): (“a young woman, girl, or female child”, Lane): (“at his birth the child is designated ʿâlîd, and other terms designate in addition a specific period within childhood. Among these are sabîyâ (“a youth, boy, or male child... or one that has not yet been weaned... so called from the time of his birth”), sabîyâ (“a young woman, girl, or female child”, Lane): (“a child until he discriminates... after which he is called sabîyâ...” or “a child from the time of his birth... until he attains to puberty...”), Lane): (“at his birth the child is designated sabîyâ, afterwards he is called tifî although I do not know how long...”, Lane): (“... a child...”, Lane): (“a youth or young man... or one from the time of his birth until he attains to the period termed šabnh, meaning young manhood...”), Lane): (“a youth or young man... or one from the time of his birth until he attains to the period termed šabnh, meaning young manhood...”), Lane): (“a youth or young man... or one from the time of his birth until he attains to the period termed šabnh, meaning young manhood...”), Lane): (“...”

Terms for either a limited period within childhood or a specific phenomenon connected with a child’s physical or mental development are sadîq (“an epithet applied to a child... in the stage extending to his completion of seven days... because his temple...”).
becomes firm... only to this period", Lane); radi** ("a child while it is a suckling", Lane); the verb ... hand, contraception existed and was lawful in mediaeval Muslim societies for economic reasons, for the benefit of the child while it is a suckling", Lane); the verb... said of a child: 'he walked a little, at his first beginning to walk' ", Ibn Sldah, 32); fatim ("a child who has become strong... and has served... or one who has nearly attained the age of puberty."); Lane); mutaraW (also: mutaraN (Ibn Sldah, 34) ... " a boy... almost or quite past the age of ten years, or active"); Lane); mustabhik ... (Ibn Sldah, 33); "... a boy... or became inflated or swollen", Lane; Ibn Sldah, 33); mustakrish (istakrasha also: radhaka, arhaka: ..."he [a kid and a boy] became large in his stomach or became hard in his palate... and began to eat"); ghabwah ("the child that passed the stage of weaning becomes ghabwah", Ibn Sldah, 33); faki ("he [a boy] became active, and grew..."); Lane); haaww ("a boy who has become strong... and has served... or one who has nearly attained the age of puberty."); Lane); alDjazzar al-Kayrawani ... "the child who has reached the age of reason", Ibn Sldah, 35). 7.4 points to those terms which signify the main stages of childhood and arranges them according to the course of the child's development: "a child when born is called radi and if, then fatim, then dariya, then dafr, then yafi, then ghabdah, then mustabhik and then kawab" (see also Ibn Kayyim al-Djawiyya, 183). The terms used in the Kur'an to designate infants, children and young people are if, sabiy, waalid and ghabdah, mentioned above, as well as fasid (female children), banin (male children), ghabriyya (offspring) and yatil (a fatherless child) (O'Shaughnessy, 33-43).

Subdivisions of childhood.

Medical-hygienic writings contain detailed descriptions of the physical and mental characteristics of the various stages in childhood and relevant treatment instructions. Thus Ibn al-Djazzar al-Kayrawani (d. 395/1004), following Hippocrates, divides childhood into four periods: 1. infancy proper from birth to dentition (sinn al-wulad); 2. second infancy from dentition to the age of seven (sinn al-ibyan); 3. childhood from the age of seven to fourteen (sinn ibn insa); 4. the age of transition from childhood to puberty starting at the age of fourteen (Siyasat al-ibyan, 86-7). Another division is offered by Arib b. Sa'd al-Kurtubi [q. v.]: 1. from birth to forty days—a period characterised by drastic changes; 2. from forty days to the appearance of molar teeth, at seven months, a stage characterised, inter alia, by the beginning of the development of the senses as well as the imagination and mental qualifications; 3. from dentition to the growth of the child's hair (the exact age is not mentioned), a stage characterised by further mental development as well as by weaning and the beginning of talking and walking, increase in the child's energy, and excellent memory (57-60, and also al-Baladi, 75).

Instructions for physical treatment as well as moral education of children on a more popular level, directed at parents and nurses, are based on the same concept of childhood as a unique period in human life with its own gradual development process (Ibn Kayyim al-Djawiyya, 137-44, and 183, where the author lists twelve terms which signify various periods in the child's life from birth to maturity).

In the context of children's mental development the appearance, at about the age of seven, of tamiz, the faculty of "discernment", which enables the child to grasp abstract ideas and thus to distinguish between good and evil, is regarded by doctors and educators as a most important stage. Its obvious manifestation being a sense of shame, discernment rounds off the development of the senses, ushers in the "stage of intellectual grasp" and presages the perfection of mental and moral qualities in adolescence. (See e.g. al-Ghazali, Ihya', iii, 22, 72; Motakki, Das Kind, 41-21). 3.) For the mental developments in the earliest period of a child's life, significant are the first smile, at the age of forty days, revealing the onset of the infant's self-awareness and mental development, and the first occurrence of dreams at the age of two months (Ibn Kayyim al-Djawiyya, 176). In socio-religious terms, important stages are: one week after birth, when the 'udika [q. v.] and amira ceremonies (see below) take place; six years, when the child is introduced to knowledge (al-Ghazali, Ihya', ii, 92; Motakki, Das Kind, 41-21).

Certain branches of the Islamic religious literature frequently raise issues of child-rearing in the context of marital matters (see e.g. Ibn Bâbawîy, iii, 274-4, 304-19; Ibn Kudâma, ix, 299-313). In Muslim societies the principal purpose of marriage was, and still is (see Ammar, 93), the bearing and rearing of children, its fulfillment an obligatory religious mission: to please God by contributing to the continued existence of the human race, using the means that God created for this goal, and to please the Prophet Muhammad by enlarging the community of the faithful. In addition to the personal advantages children bring: "... the blessing of the righteous child's invocation after his father's death" and "... the intercession through the death of the young child should he precede his (father's) death" (al-Ghazali, Ihya', ii, 67-70; Farah, 53-4). Each child, particularly a good one (al-walid al-sâlih), is therefore regarded as one of God's blessings. On the other hand, contraception existed and was lawful in mediaeval Muslim societies for economic reasons, for the benefit of the
woman and for the welfare of the existing children (Musallam, ch. 1).

Mediaeval Islamic sources abound in accounts of love and tenderness towards parents and children including close physical contacts. The Prophet Muhammad is often shown as one who knew how to treat children properly. For instance, once he hastened to wash the dirty face of a child and kiss him instead of A'ishah, who was unable to bring herself to do so, while on another occasion he remained prostrated in prayer longer than necessary so as not to disturb his grandson Husayn who was riding on his back (al-Ghazâli, Ihya', ii, 275-9). According to one of the most revealing traditions in this regard, a caring father who in the middle of the night gets up to warm his children with his own clothes is more virtuous than a fighter in a holy war (ibid., ii, 41). No wonder, then, that Salâh al-Dîn al-Ayyûbi [q.v.], the epitome of diqâd, is also depicted as a loving father to his seventeen children (Ibn Shaddâd, Fr ritât Salâh al-Dîn, n.p. n.d., 52, 59).

Children, especially when grown-up, are portrayed as arousing expectations in their parents, making them proud and others envious. They are expected to be energetic, brave and intelligent (al-Kaysi, fol. 171b). However, besides this type of parent-child relationships other, sometimes contradictory, types have always existed. On the whole, expressions of parental care for and love of their offspring refer to male children, with explicit observations reflecting discrimination against, even hatred of, females (see below). But even males were sometimes regarded as little other than property and a source of labour. Thus, while several Kur'ânic texts stress the level of parents for their children (e.g. XXVI, 17; XVII, 24; XXVIII, 9; XXXI, 33) the Kur'ân also depicts children (harûn, aishân) and possessions (mal or amsal) as a temptation to disbelievers and believers alike (e.g. VIII, 28; LXIV, 15; LVII, 20; LXIII, 9, 49; O'Shaughnessy, 38-9, 42). Side-by-side with the notion of the child's purity and innocence (for a comparison between children and saints, see al-Ghazâli, Nasihat al-mulûk, Cairo 1317, 134) there existed an image of the child as an ignorant creature, full of desires and with a weak and vulnerable spirit. This image, and the concept behind it, that childhood is no more than a "passage" leading to the "parlour" of adulthood, justified extensive, sometimes excessive, use, by parents and teachers, of corporal punishment in order to correct undesirable traits (although reservations and proposals for alternatives to physical punishment are also found in Muslim educational thought) (Gâlîdî, Children of Islam, 61-6). Children also suffered from adult violence (verbal or physical) motivated by other than educational principles. On the other hand, child abandonment and infanticide, phenomena not known in mediaeval Muslim societies in spite of the unequivocal religious rejection (Kur'ân LXXXI, 8; VI, 137, 140, 151; XVII, 31; LX, 12; XVI, 57-9) were not necessarily motivated always by feelings of hatred or contempt but may have served as a means of (post partum) birth control, particularly in times of want and economic duress (Gâlîdî, ibid., 78-9, 101-15). Even in Islamic consolation treaties for bereaved parents (see below), one finds contradictory motivations: love and tenderness towards infants and children and strong emotional ties which made their death very difficult for parents to accept; on the one hand, and steadfastness in the face of children's death, even the readiness of parents to sacrifice their offspring for the sake of God, on the other (see Gâlîdî, "The child was small", 367-86).

It has been suggested that in the traditional patrilineal Arabic-Islamic family the child "is a mature adult, capable at most of childishness. His value lies in what he will be, not in what he is" and that "childhood is de-realised to such an extent that is deliberately ignored by the fathers who willingly hand over to the mothers responsibility for their sons for a large part of their childhood" (Boudhîba, Sexuality, 219). The special emotional relationships between mothers (and particularly male) children and their long-term influence on the child (Boudhîba, The child and the mother, 128, 132-5) can be explained against this background. Anthropological research among contemporary Muslim societies gives an even stronger impression than do historical sources of the complexity of parent-child relationships. Thus the centrality of children for their parents, adult awareness of the great responsibility involved in raising and educating children, the attention for children's needs, on the one hand, and limited and not very effective interactions between adults and children and a strong feeling that children are a heavy burden, on the other, together with differences in attitudes towards males and females, are some seemingly inconsistent and contradictory observations (Friedl, 195-7, 210-11; cf. Ammar, 53).

The Kur'ân, under Judeo-Christian influence and as a response to the challenge of structural changes in tribal society, shows special sensitivity towards children. Rejecting the pre-Islamic concept of children as their fathers' property, it acknowledges their own right to live and regards their life as sacred (see e.g. XVIII, 31; VI, 151). This principle the shari'a extends even to foetuses: a special indemnity (ighara) is to be paid for causing an abortion. An unborn child can inherit, receive a legacy and, if it is a slave, be manumitted (Schacht, 124, 186; Motzki, Das Kind, 409-10).

The child's right to an established paternity (nasab), crucial in patrilineal families, gives rise to mutual rights of inheritance, guardianship and maintenance (Nasir, 156-61). It should be emphasised that Islamic law placed very few difficulties in the way of recognising the legitimacy of children. By regulating 'idda [q.v.], Kur'ânic law intended to help identify the biological father of unbabyed children. This problem was less acute in cases of divorce (Bianquis, 578). As a rule, however, any child born in wedlock is regarded as legitimate (al-walad li-sâhib al-frâgh... "the offspring belongs to the owner of the bed...", see Rubín, 5-26), provided that it is born not less than six months after the beginning of cohabitation, and not later than (according to the Hanafîs) two (according to the Shâ'îs and Maliks) four or even five years (al-Wanghari, iv, 477) after the last intercourse between husband and wife (see nIkâh, at VIII, 28). This means, in fact, that any child born to a woman, from any intercourse, is to be considered the legal offspring of her husband or master. Formal paternity can be established also through acknowledgment (ikrdr), to be used only when the child's lineage is unknown and biological fathership is feasible, or through evidence (boyyna) involving the testimony of two men or a man and two women (Bianquis, 135-205). Only by 'i'sân [q.v.] can a husband challenge the legitimacy of a child and disown his paternity. Sunni jurists showed more leniency towards walad al-zinâ (offspring born out of wedlock) than Shî'î-Imâmî ones in the contexts of purity, marriage and wet-nursing. But even among the Imâmî Shî'îs, the argument that it remains impossible to know for certain whether or not someone is walad al-zinâ played a role (Kohlerg, 237-66).
The Kur’ān abolished the pre-Islamic custom of adoption, whereby an adopted child could be assimilated in a legal sense into another family, and replaced it by the recommendation that believers treat children the infant’s welfare in this regard, for reasons in the faith and clients (XXXIII, 4-5, 37-40). Adoption was regarded by the ʿamāra as a lie, as an artificial tie between adults and children, devoid of any real emotional relationship, as a cause of confusion where lineage was concerned and thus a possible source of problems regarding marriage between members of the same family and regarding inheritance (Fahd and Hammoudi, 354-6). However, the custom of adoption, rooted in local tradition, survived in some Muslim communities, e.g. those of North Bali (Wikan, 452).

Viewing children as vulnerable, dependent creatures, Islamic law supplies various rules for the protection of their body and property. In some cases more attention is given to the child’s benefit (manfaʿāt al-ululad; see e.g. al-Sarakhsī, v, 207, vi, 169) than to the preference of maternal suckling. Family discretion and compassion, retain the power of guardianship (waʿlāya [q. v.]) over the child which involves guardianship over property (waʿlāyat al-māl) and over the person (waʿlāyat al-nafs), including overall responsibility for physical care, socialisation and education.

To these should be added the father’s duty to marry his child off when the latter comes of age (waʿlāyat al-tazān). Mothers, because of their pity and gentleness, are entrusted with the care and control of their children for the first few years of their life and, in case of dispute, have the right to custody during these years. If a mother dies, the responsibility falls on other female relatives, preferably in the mother’s line (see madāna, and Pearl, 92, 97-9).

Rūḍaʿa (lactation) [see rādāʾ] is the basic right of any infant at least during the first two years of its life (Kur’ān, II, 233; XXXI, 14; XLVI, 15). Moreover, it is the mother’s obligation (which, according to some opinions, can be enforced on her, if necessary, even if this involves injury) unless the alternatives do not endanger the infant’s life and are economically viable. At the same time, ṭūḍaʿa is a mother’s right, though it can be denied when she demands to be paid a certain sum for it and another woman is ready to suckle without or for lower pay. The father again is responsible for the infant’s welfare in this regard, for reasons in the expenses involved (Kur’ān, ibid., and LXV, 6), for finding a physically and morally suitable wet-nurse, if necessary, and for making sure she treats the infant well (Ibn Taymiyya, Ṭhibyirāt, 286; Ibn Kudāma, i, 312; al-Sarakhsī, xv, 122; al-Barāʾ, 31-5).

Cognisant of the infant’s needs, and in the belief that character traits are transmitted through the mother’s milk, Muslim jurists emphasise the preference of maternal suckling. Also, some jurists regard harmful for the nursling, and even forbid, sexual relations with a nursing woman (ṣibāʿa), in contrast to the authorisation given by a hadith (Ibn Bābawayh, iii, 305; al-Dhūjāḥi, fol. 65a; Musallam, 15-16).

Feeding of children in general and breast-feeding in particular constitute a central theme in mediaeval medical-hygienic writings and in the child-rearing manuals that Muslim doctors compiled under the strong influence of Greek medicine. These writings deal with such topics as weaning, the importance of wet-nursing, the frequency of breast-feeding, the weaning of the child and the like. This, in addition to instructions on how to treat the infant immediately after birth, how to prepare its cradle, to wash and swaddle it, advice on how to calm weeping children, on teething, on how to treat children when they start walking and talking and recommendations regarding entertainment and the company of other children. Together with observations on e.g. birth shock and the psychological development of the child, the authors discuss such theoretical issues as the relationships between innate dispositions and acquired characteristics, the changeability of natural dispositions, etc. It is clear that such 4th/10th-century authors of comprehensive medical compilations as al-Madǧūsī [q. v.] and Ibn Sīnā [q. v.], but particularly the writers of gynaecological, embryological and paediatric treatises, like Ibn al-Dżazār, Muhammad b. Yaḥyā al-Balādī and ‘Arīf b. Saʿd al-Kurtūbī, attached perhaps even greater importance to paediatrics than their Greek predecessors. Moreover, their rich and diversified knowledge implied an understanding of some of the unique characteristics of children from physical as well as psychological points of view. Ibn al-Dżazār’s Sīrat al-nihyān, for instance, has fifteen chapters on the child’s rites of passage or stages of growth in addition to six chapters on the hygienic care of newborn infants. Part of the material included in these paediatric writings was later “Islamised”, popularised and adapted for use by literate parents and nurses, for instance by Ibn Kāyīm al-Dżawīyya in his Tuhfat al-mawḍūd (Gildai, Children of Islam, 4-8, 19-34). Obviously, popular medicine and magic played an important role in the treatment of children among the common people (Ullmann, 2, 92).

The first stages of incorporating the new-born child into the larger human society, and particularly into the Muslim community, are symbolised by a series of childhood rites, most of them of tribal, pre-Islamic origin for whose performance the father has the responsibility. By reciting in his ears, immediately after birth, the formula used for the call to prayer (ṣahād?) as well as the words chanted in the mosque at the beginning of the prayer (ṣūmā), the infant was believed to acquire the basic principles of Islam.

Tahnīk, the rubbing of the infant’s palate with a date, was another ceremony early Muslims performed soon after birth. It probably symbolised the curbing of the child’s natural desires and the harnessing and directing of his energies, for it clearly parallels the practice of putting, for the first time, a rope in a horse’s mouth. It is also resembling the tribal custom of the community to share its food with the new-born child, accepting it as a member (Gildai, Children of Islam, 35-41; Motzki, Das Kind, 413). Other ceremonies, i.e. naming (tasmiya) (Schimmel, 14-24), the first haircut, which separates the child from its previous environment (Van Gennep, 50, 53-4), and the ḫikāka [q. v.], the slaughter of a sheep or a goat to redeem the child and to express gratitude for its birth, are delayed to the seventh day after birth when the prospects for the infant’s life look brighter. By performing these rites, the father confirmed his fatherhood in public and thus his responsibility towards the child. Some Muslim scholars have suggested adding male circumcision (ṣundūn [q. v.]), regarded as an act of purification and incorporation into the community of faithful (Van Gennep, 72), to the ceremonies of the seventh day. However, most say that circumcision should be performed later, at the age of seven (when the male child, under his father’s supervision, starts his systematic religious education) or ten or even thirteen years. In the latter case, it is probably designed to mark the beginning of adolescence and to prepare the child for marriage (Motzki, ibid., 416-17). Female circumcision (khafds [q. v.]), explained as primarily a means of
restraining a woman's sexual desire and maintaining chastity, is also practised when the girl is between six and thirteen years (on childhood rites, particularly male and female circumcision, in a contemporary Muslim community see Ammar, 116-23).

Ensuring that his children receive a good education is another of the father's duties. According to mediaeval Muslim thinkers, character training should start in early childhood, when the child's soul is still pure and impressionable and good character traits can be engraved upon it as upon a smooth stone. At this stage, the basic principles of faith should be instilled as soon as the child starts talking, the age of tamyiz is generally perceived as the appropriate time to begin systematic education, primarily towards performing the religious commandments (see al-Ghazâli, ibid., al-Tabarîni/ al-Tabrisî, 175), and for sending male children to the hadîth [q.v.] (or maktab) for their elementary education. The popularity of this institution in Muslim countries might have delayed by some years the induction of children into the labour force. Female children were generally educated at home by their mothers to fulfill their religious duties and to carry out household work. Obedience to God, filial piety and good conduct are the basic aims of child education (see Kur'an, IV, 36; XXXI, 13, 16-9), their accomplishment ensuring the child a happy life in this world and, more important, in the Hereafter. The focus of legalistic considerations is on ensuring that the coffin of a dead child is to be borne by people, as for a deceased adult. Kur'an commentators, theologians and heresiographers discuss whether or not the child is to be regarded as a human being in the full sense of the word. The answer given by some well-known jurists, like al-Sarakhsi (ii, 57), is in the affirmative. This means, for instance, that the coffin of a dead child is to be borne by people, not on the back of an animal, and that the washing of an infant's corpse and the prayer for him should be exactly the same as for a deceased adult. Kur'an commentators, theologians and heresiographers discuss whether or not children are questioned in the grave, whether children of unbelievers are sent to God to Hell, whether God punishes children in the Hereafter, and the exact status of Muslim children in Paradise (Rosenthal, 9-15). Discussions of this sort, abstract as they were, mirror, in some cases, certain concepts of childhood and attitudes towards children.

Like hadîth compilations, early Muslim sources contain much material on how to react to children's death, which later, against the background of the Black Death, were collected in special, apparently widely circulated, consolation treatises for bereaved parents (see e.g. al-Manbi'dî, al-Kaysî and al-Sâghwî, all from the 8th-9th/14th-15th centuries). Their main task was not to deal with the theological problems involved in the death of innocent creatures but rather to help bereaved parents cope with outbursts of emotions and with the psychological difficulties they experienced. Most interesting in these treatises, as well as in a few lamentation poems written for or by bereaved fathers (see e.g. Ibn al-Rûmî, Diwân, Cairo 1973-9, i, 244, ii, 625, 6; Ibn Nubâta, Diwân, Cairo 1905, 156, 218, 347, 348, 546), are the tension between the emotional-spontaneous type of reaction, on the one hand, and the religious ‘rational’ one, on the other, and the efforts to harmonise them. They bring to light strong psychological attachments resulting in moving emotional reactions in case of death but also call for restraint and control and even point out the religious ‘advantages’ of children's death. However, these efforts too of Muslim scholars to impose on the believers a certain cultural pattern for the emotional expression of grief often reveal a degree of understanding of basic psychological needs. According to Islam, the cultural pattern for the emotional expression of grief is often revealed in the death of innocent creatures. According to Islam, the cultural pattern for the emotional expression of grief is often revealed in the death of innocent creatures. In modern Muslim societies, consolation treatises can give us a clear idea of the dimensions of the problem and draw a partial picture of the circumstances of children's lives and causes of their deaths.

The burial of deceased infants as adults, strong psychological ties between parents and children expressed through intense, heart-rending grieving in cases of children's death, difficulties in comforting bereaved parents as well as opposite reactions of restraint and control are all part of contemporary Muslim communities. However, the link between them and Islamic ethics is not always unequivocal (Grandqvist, 90-2; Wikán, 451-3).

4. Children in society

Any child born to Muslim parents is regarded as Muslim. If a child is not Muslim, e.g. a hadîth, that Islam ‘overcomes’ other religions (ya'â sama' in Arabic) (al-Ash'âr, K. al-Qur'ân, bâb 80) this is true also when only one parent is Muslim. Al-Sarakhsi (v, 210), on the other hand, maintains that the child follows his father's faith (al-walad... muslim al-Ab). According to some legal opinions, the fact that children lack responsibility (takalluf), that they are
neither rewarded nor punished for their deeds (marfu‘ al-kalam), that they are not even addressed by public prayer. Even though they are aware of the special religious status of children, there is no agreement between jurists on the specific status and obligations for both, male and female. ‘Abbas a child could not lead in prayer since it is not one of the “people of perfection” (ahl al-kamal) (Ibn Kudámá, ii, 54). A common argument is that the observance of religious commandments, particularly prayer and the fast of Ramadan, is for children of an educational rather than a formal-religious significance.

The special legal status of the child is reflected also in spheres outside the purely ritual domain. Being subject to legal disability or interdiction (khatīr) children, like the insane (madhūn) and the idiot (ma‘tūh), do not have the capacity to contract and to dispose (tasarruf), do not owe full obedience to their parents, and may be guilty of deliberate homicide, but because legally he is not considered capable of forming a legal relationship, he is subject to death penalty (Coulson, 179). Still, Islamic law distinguishes between various stages of childhood: The infant (jīf), who is wholly incapable, can incur certain financial obligations. A minor (sabīy, saghir) has in addition the capacity to conclude purely beneficial transactions and to accept donations and charitable gifts. An intelligent (sabīy ya‘tulatu), discriminating (mutma‘ayiz) minor, moreover, can adopt Islam, enter into a contract of manumission by muskāi‘ah, if he is a slave, and carry out a procurement (Schacht, 124-5).

That Islamic law allows child marriage seems to contradict its general attitude of protection towards children. The Khari‘a may have been following the social practice of the Islamic core countries in the 1st-4th/7th-10th centuries. Little is known about the frequency, the possibly differential regional distribution, manner of functioning and motives of child marriage, that is, whether a minor, like the insane or the idiot, may be married, if he is a slave, and how far afield as Morocco (al-WansharisT, iii, 30, 90, 96, 130, 195, 281, 292, 378) and Palestine (Motzki, Muslimské Kinderrechte, 82-90). Contemporary ethnological and sociological field studies have shown that in various regions and milieux of the Middle East there exists a practice of marriages in which either one or both partners are children. However, more recent family legislation in Islamic states prescribing a minimum age for social and demographic reasons has led to a marked decline in the number of child marriages (see nīkāş). From al-Fatāwā al-Khayriyya by the Hanafī jurist al-Khayr al-Din al-Ramlī (993-1081/1585-1670), it emerges that the minors involved were predominantly girls, that marriage contracts were made up for them while their ages ranged anywhere between seven and sexual maturity, and that generally neither the wording nor marital sexual intercourse were postponed until they had reached sexual maturity (Motzki, ibid.).

The sexuality of infants was deemed insignificant and males could be dressed, for instance, in silk clothes more typical of women (Ibn Kudámá, i, 629). This was no longer allowed for older children the moment adults noticed their budding sexuality (al-Ghazālī, Ifthā‘, iii, 93). Hadīth and fikr compilations recommend separating children in bed when they have reached the age of ten (according to one version, six), having adults avoid washing children of the other sex as soon as they are seven years, and even consider any form of physical contact between a mother and her six-year-old daughter a form of adultery (Ibn Bābawayh, iii, 275-6; Ibn Kudámá, ii, 313-4, 400; al-Dā‘ī, fol. 66a), thus reflecting the awareness of the latent sexuality of children approaching maturity. The popularity of child marriage renders this awareness even more obvious.

It is told of the Prophet that he did not allow the fourteen-year-old Ibn ‘Umar to join the Muslim fighters at Uhud, but a year later agreed to include him among the warriors of the battle of Khandak (al-Shafi‘ī, vi, 135). While reaffirming the age of fifteen as a criterion of majority, this hadīth reflects a general Islamic objection to the participation of children in war. The prohibition, attributed to the Prophet (see e.g. Mālik b. Anas, 163-4), against the killing of an enemy’s children (and women) in time of war is also important here. In his explanation, Ibn Taymiyya (Ma‘mul al-fatāwā, xvi, 80) bases himself on a threefold argument: (a) like Muslim children, the enemy’s children, from the juridical point of view, are to be regarded as innocent and not responsible; (b) like women in the enemy’s homeland, they are not a part of the fighting force; and (c) there is always the possibility for them to become Muslims.

The Kur‘ān calls for a just treatment of a fatherless child (yatim). Nineteen texts make mention of children of such status, the earliest speaking of God’s providential care of Muhammad. Several verses from the Meccan period forbid any harsh and oppressive treatment of fatherless children, urge kindness and justice towards them, particularly in the matter of property rights, and speak of feeding them as well as the poor. Exhortations to respect the property rights of children as well as to provide for their security by marrying them off are included in some of the Medinan sūras (O’Shaughnessy, 35-8) and echoed in later legal writings (see e.g. al-Sarakhtsi, xv, 129; al-Dā‘ī fol. 66a-b). Orphanages and foundling homes were unknown in pre-modern Muslim societies (unlike their European counterparts), so that caring for these children and educating them was the responsibility of their relatives. An abandoned child (lākī [q.v.], manbadh) was also brought up within an individual family. That the practice of abandonment was known in mediaeval Muslim societies, probably as a means for regulating family size or as a device for disposing of illegitimate children, can be inferred from the juridical literature. Questions such as the status of the foundling and his religious identity, his maintenance, the management of his property, claiming abandoned children and the like are rather frequently dealt with (see e.g. Mālik b. Anas, 293; al-Shafi‘ī, vi, 263; al-Samarkandi, i, 315-16).

A preference for males is typical of Muslim societies with a patriarchal family structure. The majority of the utterances in Arabic-Islamic sources that show understanding and sympathy for children refer to males. That female children are regarded as persons in their own right is shown, inter alia, by the efforts religious scholars made to counteract this practice by praising fathers devoted to their daughters (Ibn al-Dā‘ī, 356-9) and denouncing the rejection of newborn females that sometimes led fathers to wish them dead (Ibn Kayyim al-Dā‘ī, 10-13). It is against this background that differences in treating and educating male and female children and even female infanticide are to be explain-
ed. It should be emphasised, however, that infanticide was committed not only on females and that... the Prophet. Their own deeds and statements, too, are worthy of imitation, particularly in the history of Islamic rites.

The first endeavours to define the sahaba as a distinct group of individuals, and to establish the most important criteria according to which someone might be given the title of sahabi, probably reach back to the outset of the 2nd/8th century. At the beginning of the K. Fada'î ni ashab al-nabi of his Sahîb, al-Bukhari [q. v.], however, needs further interpretation. According to him, such an individual, while being a believing Muslim, must have accompanied (sahaba, lâhu yubba) the Prophet or have seen him. It has always remained a point of discussion, whether the fact of having seen, somehow (ru'yâ) the Prophet is sufficient in this respect. In general, participation in a number of the Prophet's campaigns, adulthood (bulgh al-hulum), and capability of transmitting directly from the Prophet were basic prerequisites. According to a passage in Ibn al-Qâhir (Usd al-sâhâba, ed. Tehran, n.d., i, 12), the division of the sahâba in classes was already common in the time of al-Wâkidî (130-207/747-825 [q. v.]) at the latest. He clearly speaks of a classification of the sahâba according to their pre-eminence in Islam (lâ' tabeâthum is lîl-islâm). For this, the moment of conversion to Islam was of particular importance. Ibn Sa'd (al-Tubahât al-kubrâ, ed. Sachau et alii, Leiden 1903-40) places the moment of conversion in a clearly defined historical context: certain individuals accepted Islam before the Prophet entered the house of al-Abâ'âbâ, al-Mu'âawiyah in the 3rd/9th century (Safi [Ibn Sa'd, iii/1, 34; ii/1-2, 3; 59; ii, 10-11; 62, Il. 15-7; 88, Il. 2-4; 107, Il. 5-7; 116, Il. 21-3; 164, Il. 16-8, etc.; for further references, see M. Muranyi, Die ersten Muslime von Mekka... in JSAl, viii [1986], 28). This circle of early Muslims (aslama kadimi/kâna kadim al-islâm) is also designated as al-sâbi'ân/al-sabikân al-auwa'ân who, after 'Umar b. al-Khaṭâb had entered al-Arîm's house, counted 53 persons (see the list in al-Dhahâbî, Suyûr al-lâm al-nubâlâ, ed. Shu'ayb al-Arîmî and Husayn al-Asad, Beirut 1990, i, 144-5). The sabikân are also mentioned in Kur'ân, IX, 100, and LVI, 10. Kur'ân exegesis (tafsîr [q. v.]) already defined them in the light of the historical events of Muhammad's prophethood and considers as sabikân those Muslims who prayed in both directions, viz. north and south, who emigrated with Muhammad to Medina, and who took part in the battle of Badr [q. v.] and in the treaty of al-Hudâbiyâ [q. v.]. The latter are also called ashab al-athâr al-ridâwîn, i.e. those who took the oath of allegiance to the Prophet (bay'at al-ridâwân) under the tree in the oasis of al-Hudâbiyâ. The elite of the Meccan Muslims are also designated as the (first) Emigrants (al-muhâdîjîn [al-awwâlîn]), i.e. those who had joined the Prophet by March 628 (al-Hudâbiyâ at the latest, or, according to another interpretation, by January 624 (the date of the change of the kibla [q. v.]). Members of Arab tribes, who settled at Medina after their conversion to Islam and thus renounced returning to their tribes, are also designated as muhâdîjîn. However, in the endeavours of classification carried out by the following generations, these individuals do not appear among the "Emigrants" from Mecca, who emigrated with Muhammad—or shortly afterwards—to Medina. The above-mentioned classification cannot be established for the Medinan "Helpers" (al-Ansâr [q. v.]). Mentioned are only those representatives of the two main tribes of Ya'ârib [see MADINA]—the Aws and the Khazâraj—who took part in the secret meetings which the Prophet held at al-'Aqaba [q. v.] in order to negotiate guarantees of protection for himself and for the Meccan emigrants at the eve of the Hidjra [q. v.]. The Ansâr did not take part in Muhammad's campaigns before Badr (Ibn Sa'd, ii/1, 6, 1. 16; al-Wâkidî, Kitiib al-Madâgî, ed. M. Jones, London 1966, l, 11, 48). The moment of conversion to Islam and the participation in the campaigns of the Prophet were of particular importance for the economic and social position of the sahâba and of their descendants. These aspects seem to have been taken into consideration when, under 'Umar b. al-Khaṭâb, the lists for endowments were established (see G. R. Pue, Der Disvan von 'Umar b. al-Hasîb, diss. Bonn 1970). Early lists in the Maghâzî literature, among which is a papyrus fragment of the 2nd/8th century with the names of the fighters at Badr (A. Grohmann, Arabic papyri from Fîrîbî al-Mird, Louvain 1963, 82-4), confirm the keen interest of historiography in the above-mentioned endeavours of classification. Ibn Sa'd composed his K. al-Tubâkât al-kubrâ on the basis of this principle of classification, and also from old lists given by the historiographers. In the first class (sahaba) are mentioned the ahl al-sâbi'ân, the fighters at Badr from among the Meccan Emigrants and the Ansâr, the twelve nukâhâ of al-'Aqaba and some Muslims whose participation in the battle of Badr cannot be proved beyond doubt. In the second class are the Emigrants who were converted at an early date and had migrated to Medina. The fighters at Uhud during the Prophet's stay at Mecca, are the so-called mustâd'âfîn, a term which W. M. Watt (Muhammad at Mecca, Oxford 1953, 48, 96) renders with "those who are considered weak". They represent the class of Meccans who were socio-economically weak and destitute, and who were prevented by their clans from participating in the Hidjra. According to Kur'ân exegesis, Sûra IV, 75, refers to this group of the oldest sahâba. The good qualities and virtues of the sahâba, measured against their early merits for Islam (manâkîb fadâ'în), were a favourite theme already in the narrative art of the oldest historiographers of the early 2nd/8th century. The works of the 3rd/9th century known as muṣâannafât [q. v.] in their turn devote a special kitâb to this theme: fadâ'î ashab al-nabi, manâkîb al-anâr. In the meantime, specific collections were devoted to the ten Companions of the Prophet to whom he is said to have promised paradise (al-muṣâhârîn al-aghār), namely the four "rightly guided" caliphs, Êtalâ b. 'Abd Allâh, al-Zubayr b. al-'Awâlmân, 'Abd al-Râhmân b. 'Awf, Sa'd b. Mâlik, Sa'îd b. Zayd and Abu 'Abd al-Djârrâh [q. v.] (see e.g. al-Muhîib al-Tabari, al-Riâdî al-nâdira fi manâkîb al-aghâr, 'Tânja 1953). Due to the narrative art of the historiographers, the sahâba in the title of a celebrity with charismatic features. In Sunni Islam, abuse of them (sahb al-sâhâba) is considered as a sin and, according to many interpretations, is even to be punished by death. It is a duty to pronounce the târdîya, i.e. the eulogy târdîya 'Îlâm 'anhâ, when one mentions the name of a Companion of the Prophet. Historiography, local history in particular, deals in detail with information which has been transmitted.
about the stay of sahāba in provincial towns. One-third of the K. Futuh Misr wa-akhbārd by Abd al-Djabbar b. Abd Allah b. Muhammad [q.v.], as a reward for his services at the battle of Kotila. Before his death, in 1770, it was overrun by Sikhs and

SAHĀRA — SAHĀRANPUR

829

Sahābah is remembered essentially for his rubāʿīs, the total number of which is most probably around 6,000. Some early writers, however, place the figures much higher, but the numbers quoted by them appear to be exaggerated. In his poetry, Sahābi deals with mystical and moral themes. He was one of the chief poets of the Safawī period whose verse, according to Shibli Nu'mānī, reflects a philosophical colour (cf. Šīr ʿal-ʿAdīm, v, 3rd ed., A'zāmgār 1420, 209). Besides poetry, Sahābi also composed, in mixed prose and verse, a Sufi treatise (risāla), entitled ʿUraaṣ al-ṣawahl ("The true guide").

SAHARA [see Al-Sahra].

SAHARANPUR, a city of northern India in the uppermost part of the Ganges-Djumna Doáb (lat. 29° 57′ N., long. 77° 33′ E.), now in the extreme northwestern tip of the Uttar Pradesh State of the Indian Union.

It was founded in ca. 740/1340, in the reign of Muhammad b. Tughluk [q.v.], and was named after a local Muchhal. The capital district suffered severely during the invasion of Timūr; in 932/1526 Bábur traversed them on his way to Pánpát, and some local Mughal colonies trace their origin to his followers. Muslim influence gained much by the proselytising zeal of ʿAbd al-Kuddús, who ruled the district until the reign of Akbar. Under Akbar, it was the centre of a zabár and important enough to be a mint place. In the reigns of Djahán and Shah Djáhán, Saharanpur was a favourite summer resort of the court, owing to the coolness of its climate and the abundance of game in its neighbourhood. Nur Djánád had a palace in the village of Nárnagár, which perpetuates her name, and the royal hunting seat, Fádsháh Mahálli, was built for Shah Djáhán. After the death of Awrangzib, the district suffered severely from the inroads of the Sikhs, who massacred and Muslims indiscriminately, until, until 1716, they were temporarily crushed by the imperial Mughal authority. The upper Doáb then passed into the hands of the Sayyids of Báhá, and on their fall in 1721 into those of several favourites. In 1754 Ahmad Shah Durrání conferred it on the Rohilla, Nádjb Khán [q.v.], as a reward for his services at the battle of Kotlá. Before his death, in 1770, it was overrun by Sikhs and
Marathás. His son Dabít Khán revolted from Dihlí, but was reconciled, and his son Ghulam Kadir, who succeeded him in 1785, established a strong government and dealt with the Sikhs. He was a coarse and brutal chief, and in 1788 he blinded the emperor Sháh 'Álam, being subsequently justly mutilated and put to death by Sindhyá. Saharanpur remained nominally in the hands of the Marathás, but actually in those of the Sikhs, until its conquest and occupation by the British after the fall of Allígárh and the battle of Dihlí in 1803. Saharanpur was only slightly affected by the Sepoy Mutiny of 1857-8, even though this last broke out in the nearby city of Meerut [see MIRÁF], with order restored by a Gurkha force by the end of 1857.

It is now the administrative centre of a District of the same name, a meeting-place for roads and railways and a centre for agriculture and food processing. The population of the city was 225,700 in 1971; at the opening of the 20th century, a majority of this urban population was Muslim, but many of these migrated to Pakistan after 1947.

**Bibliography:**

**AL-SÁHBA** is the name of a wádí in the al-Khardjí [q.v.] district of Najd [q.v. and see AL-HAWÁTA], the central province of modern Saudi Arabia. The word itself is the feminine of an adjective of the form áq'alu, but it has no comparative or superlative signification (Wright, Grammar, i, 185A, cf. AL-SÁHRA). It is related to sahíb, pl. suháb "desert, level country". The large valley runs eastwards into the Gulf basin across the sand desert of al-Dáhna [q.v. and, north of Yábrám, of al-Díjafúra (see the map in AL-SARÁB, DJEZÍRÁT).

**Bibliography:**

**SAHIBAN WÁ'IL**, the name given to an orátor and poet of the tribe of Wá'il, "whose seductive eloquence has passed into a proverb and who, it is said, whilst addressing an assembly for half-a-day, never used the same word (twice)" (Kazímirski, Dictionnaire, i, 1057; see LÁÚ and the other lexica). Speaking of the same elliptical chance, whereby some person became a household word whereas others, equally meritorious, do not, al-Džáhíz (Hayawdn, ii, 104), cites Sahiban Wá'il, who was eclipsed by his contemporary Ibn al-Kirriyá, murdered by al-Ḫájjídád in 84/703 (loc. cit., n. 5).

In his eulogy of the book (al-kitáb), the same al-Džáhíz (ibid., i, 39) says: "If you wish, it can be more eloquent for you than Sahiban Wá'il or more tongue-tied than Báští" (an adolescent), echoing a proverb which figures in the collections, where it is said "more convincing (al-šuháb) than Sahiban Wá'il, whereas one says "clearer (áfah) than Kusás B. Sáída [q.v.]" (cf. al-Nuwayrí, Khíyá, Cairo 1924, ii, 119).

Al-Tábarí, Taťíkhí, ii, 1257, attributes to him seven verses in which he praises the courage of the army of Kutayba b. Muslim (49-96/669-715 [q.v.]) in the course of the conquest of Afghanistan between 89/705 and 90/706, notably, at the time of the conquest of Khokánd [q.v.], which would indicate that Sahiban was still alive in the caliphate of al-Wálid I (86-96/705-15).

(T. Fadó)

**SAHIB (A.), "companion", a term with various senses in Islamic usage. Formally it is an active participle of the transitive verb sahiba yashahu "to associate with", but semantically a pure noun; it thus cannot govern an object in the accusative. The most common plural is asahid, of which the double plural (djamí al-asjam) asahib is given in the dictionaries, while its "diminutive of the plural" (tasghí al-djamí) usahib is attested (Wensinck, Concordance, s.v.). Other plurals include sahib (a collective noun), šahib and suhán, the verbal nouns suhaba and ashaba are also employed as plurals (collectives). For the Companions of the Prophet one finds sahib, asahid, and specifically sahiba [q.v.], the last of which yields the designation of the individual asháhid, by nisba formation (a procedure not uncommon with collective nouns). In the vocative the truncated form (turkhím) y sáhib lór y sáhibá "O my companion" is well attested. The fem. is šahibá, with the plural usahibh and the double plural asahibhub (cf. Wensinck, Concordance, s.v.).

Sahib, in its various semantic transformations, has produced a considerable number of titles, allusive names, and some technical terms, mostly by being the first term in a genitive construct. The idea of "companion" is specialised in cases where one speaks of the sahib of a poet, soothsayer, or orator, meaning his alter ego among the giin from whom he receives (some of) his inspiration (also called shaydín [q.v.], râ'í, and tâbí); this is a pre-Islamic notion, but one that lives on in Islamic times as a literary fiction (e.g. in the Risálat al-tawâshí. usa l-tawâshí of Ibn Shubayh [q.v.]). Still with the meaning "companion", the term has sometimes been used to refer to the councillors of a ruler, thus in Ibn al-Mukáfí's Risâlá fi l-sahibá (see Ch. Pellat, Ibn al-Muqaffá, mort vers.140-175, "conseiller" du Califé [Paris 1976], 88-9). The plural asahib followed by the name of a locality in the genitive serves to refer to people who are companions in that particular place; thus Kurání phrases like asahib al-djamána, asahib al-nár and asahib al-tah (see e.g. U.M. Chittick, The Sufi path of knowledge, Albany 1989, 270-4). The plural asahib followed by a personal name in the genitive is, alongside the nisba formation, the normal way of expressing the "adherents of so-and-so" or the "members of his school": asahib Abú Hanifa = al-Hanafíyya. Al-Fayyúmí (d. 770/1368) considers this last usage figurative (madjáz), presumably the school members are mostly not contemporary with the founder (al-Misháḥ al-nunír, Beirut 1398/1978, 394).

In one of its semantic developments, the term sahib becomes more general: "partner", "match" (sometimes "adversary"), and finally "someone (or something) endowed with s.th. or characterised by s.th.". In this last sense it ends up being synonymous with dhú (cf. sahib al-hál = dhú l-hál, "the noun modified by a circumstantial accusative"). Here belong the rather
popular allusive names, such as sahib al-hut "the man with the fish = Jonah (see Sura LXVIII, 48, and cf. the synonymous dhu l-nun in Sura XXI, 87); sahib al-imārāt "the man with the donkey" = the Khārijīte rebel Abū Yazīd al-Nukkārī (q.v.) (cf. dhu l-himār, nickname of the Yemeni pseudo-prophet Ayhaha at the time of the Prophet, and for the symbolism of riding a donkey, see C. Brockelmann, Geschichte der islamischen Völker und Staaten, Munich and Berlin 1943, Eng. tr. History of the Islamic peoples, London 1949, 49); sahib al-nākā "the man with the she-camel" and sahib al-ḏimā "the man with the sheep" = the two Ismāʿīlī apostles; dhu l-himās b. Zikrāwāy and al-Husayn b. Zikrāwāy (see F. Dafāṭary, The Ismaʿīlīs, their history and doctrine, Cambridge 1990, 132). This type of cognomen seems to be particularly common with religious rebels and "liberators" and has an air of the being a code and/or taboo name. This type may also occur in the plural: asbāb al-fil "those with the elephant" (Sūra CV, 2). In the same semantic category belongs the plural asbāb followed by an abstract noun in the genitive to denote adherents of a specific concept: asbāb al-tansuḥūth "the believers in metempsychosis", asbāb al-taʿayyūf "the proponents of juridical discretion" as opposed to the asbāb al-hadīth "the proponents of the (exclusive use) of Prophetic Tradition."

The last example shows that, even with a concrete noun (hadīth being a corpus of texts), the resulting compound may still belong in this category, with "belief in", "defence of", or a similar notion being understood. Thus e.g. sahib al-dīd and sahib al-kalb "the advocate of the rooster" and "the advocate of the dog" (in al-Dāūhīz, al-Hayawān, passim); obviously, these expressions could also mean the "owners" of the rooster and the dog.

By narrowing the semantic field just mentioned one arrives at the notion of "possessor, owner, lord." In the legal sense of ownership one finds it in sahib al-bayt "the owner of the house" and similarly in sahib al-dāyì "debtor." In the sense of "chief" it forms part of the designation of a good many administrative offices: sahib al-dīdījār "army chief", sahib al-barād "chief of intelligence", sahib al-shūra "police chief", sahib al-sūk "market inspector" (cf. tr. of Grk. agoranomos, later on called multābār, cf. J. Schacht, An introd. to Islamic history, Cambridge 1961; C. Cahen, Précis d'histoire islamique, Paris 1964, tr. by C. Imber). These officials are often referred to as "Ibn al-Saḥib" ( = al-Sahib) who possessed various administrative offices including the appointment over the portal of the Kubbeli Jadīm in Ayyūn Karahisār, bearing the date 731/1331, names the founder of the mosque as the "great lord" (al-maṣūla il-mawā'itī) Ahmad b. Muhammad, who was presumably the "Ibn al-Saḥib" to whom al-Umārī refers. An inscription dated 742/1341 on the Ulu Jadīm in Ayyūn Karahisār refers to the same person as "Nūṣrat al-Dawla wa l-Dīn Ahmad") describing him as "the progeny of the great viziers" (sulṭān al-awsāṣa il-ṣāmām) (Ahmed Tewfīd, in TTEM, 1st series, xi [1341/1923], 357). It is conceivable that this Ahmad b. Muhammad was the son of the "Sāmān al-Dīn Muhammad son of (Nusrat al-Dīn) al-Munsūrī al-Umanī (Gümüş, in about 790/1390, notes that "Karasar" possession of the "grandsons of Fakhr al-Dīn". Al-Umārī too, in about 730/1330, notes that "Karasar" belonged to Ibn al-Saḥīb ( = al-Saḥīb) who possessed, in addition, a thousand villages and four thousand cavalrymen. To defend his possessions against Čōban's son, Timurtaş, he had sought the protection of the lord of Germiyan through marriage to his daughter Madašik al-ashār, cited by Ahmed Tewfīd, in TOEM, 1st series, ii [1327/1909], 536 ff.). An inscription over the portal of the Kubbeli Jadīm in Ayyūn Karahisār, bearing the date 731/1331, names the founder of the mosque as the "great lord" (al-maṣūla il-mawā'itī) Ahmad b. Muhammad, who was presumably the "Ibn al-Saḥīb" to whom al-Umārī refers. An inscription dated 742/1341 on the Ulu Jadīm in Ayyūn Karahisār refers to the same person as "Nūṣrat al-Dawla wa l-Dīn Ahmad") describing him as "the progeny of the great viziers" (sulṭān al-awsāṣa il-ṣāmām) (Ahmed Tewfīd, in TTEM, 1st series, xi [1341/1923], 357). It is conceivable that this Ahmad b. Muhammad was the son of the "Sāmān al-Dīn Muhammad son of (Nusrat al-Dīn) al-Munsūrī al-Umanī (Gümüş, in about 790/1390, notes that "Karasar" possession of the "grandsons of Fakhr al-Dīn") 'Ali (Sāḥib) of Husayn) who is buried in the Sahip Ta Mausoleum in Konya (Ahmed Tewfīd, loc. cit.).

Evidence of the family appears in the second half of the 8th/14th century, but in the Ottoman period Ayyūn Karahisār -continued to be known as Sāḥib'in Karahisār (Nagri, ed. F.R. Unat and M.A. Köymen, Kütahya, Konya, Ankara 1949, 165), or from the 10th/16th century, as Karahisār-i Sāḥib ("Sāḥib's Karahisār").

SĀḤĪB ATĀ ĀĞHULLARI, the modern designation for the descendants of the Rûm Saḷļūqiḍ vīzīt Fakhr al-Dīn Āli (d. 687/1288), known as Sāḥīb Atā. Literary sources record two sons of Fakhr al-Dīn, Tād al-Dīn Husayn, the eldest (Ibn Bibli, ed. M.Th. Houtsma, Histoire des Seldjoucides d'Asie Mineure, Leiden 1902, iii, 337) and Nasrūt al-Dīn (Aksara, ii, 308). The last of these is evidently the same as Afyun Karahisār (q.v.). In his list of Turkish principalities submitting to the nāṣiru dāwla (q.v.) after the accession of the Ilkhanid Abu Saḥīb ( = al-Sahib) who possessed various administrative offices including the appointment over the portal of the Kubbeli Jadīm in Ayyūn Karahisār, bearing the date 731/1331, names the founder of the mosque as the "great lord" (al-maṣūla il-mawā'itī) Ahmad b. Muhammad, who was presumably the "Ibn al-Saḥīb" to whom al-Umārī refers. An inscription dated 742/1341 on the Ulu Jadīm in Ayyūn Karahisār refers to the same person as "Nūṣrat al-Dawla wa l-Dīn Ahmad") describing him as "the progeny of the great viziers" (sulṭān al-awsāṣa il-ṣāmām) (Ahmed Tewfīd, in TTEM, 1st series, xi [1341/1923], 357). It is conceivable that this Ahmad b. Muhammad was the son of the "Sāmān al-Dīn Muhammad son of (Nusrat al-Dīn) al-Munsūrī al-Umanī (Gümüş, in about 790/1390, notes that "Karasar" possession of the "grandsons of Fakhr al-Dīn") 'Ali (Sāḥib) son of Husayn) who is buried in the Sahip Ta Mausoleum in Konya (Ahmed Tewfīd, loc. cit.).

Evidence of the family appears in the second half of the 8th/14th century, but in the Ottoman period Ayyūn Karahisār -continued to be known as Sāḥib'in Karahisār (Nagri, ed. F.R. door of the palace in order to register complaints and pleas. When the vizier was a "man of the sword" and presided in person, the Şahib al-bâb's role as simple assistant was reminiscent of that of the hâdîb amongst the Mamülüs.

The institution did not exist among the first Fâtîmids, and Hâsun al-Mulk Aftâkîn in, the time of the vizierate for al-Afdâl, was the first şâhib al-bâb to be mentioned in the sources (beginning of the 6th/12th century). The şâhib al-bâb was addressed as "Amir al-Mulk". His deputy, to whom he delegated the important office (called al-niyâba al-shârîfa) of assigning their places to envoys accredited to the court, was generally a legal figure or a religious dignitary, whom one addressed as "Adayy al-Mulk. The şâhib al-bâb occupied an important place in the processions forming part of the official ceremonies and the calendrical receptions of the later Fâtîmids [see MAWÂRÎK. 1], a ceremonial occasion which Ibn al-Tuwâryrî [q.v.], describes in detail.

Şâhib Girây Khan I, khan of the Crimea (939/1532-51) and khan of Kazan (927-30/1521-4), son of Mengî Girây Khan I [q.v.] and his wife Nur Dewlet, mother through an earlier marriage of Muhammad Emin (d. 925/1519), the last khan of Kazan [q.v.], in direct line from Ulugh Muhammad, khan of the Golden Horde (1419-24, 1427-38). Half-brother of Mehmed Girây Khan I (920-9/1515-23 [q.v.]), Şahîb Girây was instrumental in this latter khan's new hostile policy against Muscovy, their father Mengî Girây's traditional ally. In 927/1521, Şahîb Girây was able with the khan's help to drive away the Russian-backed candidate, Şâhî 'Ali, and to occupy the throne of Kazan, thus stressing the Girây family's claims to the heritage of the Golden Horde. In concurrence with Mehmed Girây Khan I, he subsequently engaged in a struggle with Muscovy for the possession of the steppe region, which was to come to an end only 31 years later with Tsar Ivan IV's (1533-84) destruction of that khanate. In 929/1523, the brothers attacked the khanate of Astrapkhan [q.v.], from which the erstwhile Husayn Khan, Muscovy's candidate, was excluded. In the same year, they launched a major campaign against Grand Prince Vasiliy III of Muscovy (1505-33). In the following year, as Vasiliy III prepared an expedition against Kazan, Şahîb Girây abdicated from the throne of Kazan, designated his nephew Şafî Girây (first reign 930-7/1524-31) as his successor and took refuge with the Ottomans. The following eight years, Şahîb Girây stayed in Istanbul as a guest and trusted friend of sultan Suleyman I (1520-66 [q.v.]). He not only participated in all sultan's campaigns, e.g. in Hungary in 1532, but also became intimately acquainted with Ottoman institutions and culture.

After both the Ottoman-backed Şâfîdet Girây Khan I (1524-May 1532) and his nephew Islam Girây Khan I (May-Sept. 1532 [q.v.]), who had found support with parts of the Crimean tribal aristocracy, had renounced the khanship, the Ottoman sultan confirmed with a firman (reference to this is made in a document, the text and translation of which is given in Khatanat al-Dimashq, 121-5; transcription in Gökbilgin 1973, 55-6) Şahîb Girây as the new khan and the former khan, Islam Girây, as his kâliba [q.v.] or heir apparent. Accompanied by a large detachment of Ottoman troops (kaptî kula), among them 360 artillerymen (topçu and tıfendiştir), and 1,000 Janissaries, the new khan received the homage of the representatives of the Crimean noble clans (kâraça bey) at the mouth of the Dnepr (Özü [see Özi]) river. He was the first Crimean khan to receive the seghîn aklesî or accession money.

Obviously, the new khan had not been accepted by the entire Crimean tribal aristocracy, which supported by partisans from the noble clans, was threatening to ruin the country. Şahîb Girây's troubles with his nephew Islam Girây continued until he succeeded, in 1537, in having him killed by Bâkî Beg, one of the leaders of the eminent Crimean karaçe clan of the Mangîhts and subsequently Şahîb Girây's most dangerous opponent. After this incident, the Crimean nobles who had been partisans of İslâm Girây paid allegiance to the khan.

Şahîb Girây Khan I was now able to participate as a much-honoured ally in the Ottoman campaign against Moldavia (1538), which ended with the establishment of the serifkân of Akkerman comprising the territories of Budjak [q.v.], between the rivers Prut and Dnestr, and the neighbourhood of the former Tatar fortress of Özi/Oçakov (cf. G. Veinstein, L'occupation ottomane d'Ozâkov et le problème de la frontière illyo-tartare, 1538-1544, in Païs turco-tatar-Presént souvène. Études offertes à A. Bennigsen, Louvain-Paris 1986, 123-55). In the following year, the khan turned his attention towards his unruly Çerkes neighbours. Owing to the rugged terrain, however, the campaign was not successful, nor was another one in 1542.

In winter 1559/40, the khan sent an army of 30,000 men on a raid against Muscovy, under the command of the kâliba, his son Elin Girây. In winter 1541, Şahîb Girây in person led an—unsuccessful—campaign into Muscovite territory, but then finally managed to kill the Mangîht Bakî Beg, associated with the Nogâhs [q.v.], of the steppe who represented the Noghays' pre-eminence in the steppe. In 1549, he switched his attention towards his unruly Çerces neighbours. In spite of his excellent relations with the Ottoman court, at least during the first half of his rule, Şahîb Girây proved to be more than a puppet ruler in the service of sultan Suleyman's power game in the Black Sea area, or, on a different level, the preservation of the sultan's peaceful policy towards Muscovy in view of his trading interests. The khan's main political objective remained the containment of his northern neighbour. In this aim, he made regular inroads into that territory.

Both the intervention of the Şhi'rîn bey on behalf of the powerful Crimean aristocracy and the suspicion of Ottoman court circles in regard to Şahîb Girây's independent political action led to the khan's final downfall. Under the pretext of investing Dewlet Girây
SAHIB GIRAY KHAN I — SAHIB AL-MADINA

Sahib Giray Khan was also, in Persia, where it has since been corrupted into Khan or Kâhin, the name of a coin of 1000 dinars, the tenth part of a tâmaq. Bibliography: Sharaf al-Din Āli Yazdi, Zafer-nâma, ed. F. Tauer, Prague 1937-50; Muhammad Kâsim Firuzî, Gulshan-i Ibrâhîmî, lith. Bombay 1832; Ābd al-Hamîd Lâhawri, Pâdshâh-nâma, Bibliotheca Indica ed., Calcutta 1866-72; Bûrhan-i-kâfî, s.v. kâhin. (T. W. Haig)

SAHIB AL-MADINA (A.), an administrative function found in mediaeval Islamic Spain.

Documentation for this is almost exclusively found in regard to al-Andalus. The Granadan jurist Ibn Sahî [q.v.], in his al-Abkâm al-kurban, mentions it amongst the six traditional functions (khutta or "magistratures") which gave their holders the right to pronounce judgements (the kâdî, the saihib al-shurta, the s. al-muzâlim, the s. al-nâdî, the s. al-madina and the s. al-sâkî). According to the Valencian Ibn al-Abbâr [q.v.], there existed until the 7th/13th century two distinct magistratures, the saihib al-madina and the s. al-shurta. In the 8th/14th century, Ibn Sa'id [q.v.] (in the great, later compilation of Andalusian culture by al-Makkarî, the Nafr al-tâbîn, and in the following one, Ibn Khaldûn [q.v.], in his Mukaddima, also mention the title of s. al-madina, but make it the designation of the chief of the police or shurta in Muslim Spain. However, the Sevillan Ibn 'Abdûn [q.v.], who in his treatise on hisba, written towards the end of the 5th/11th century, passes in review the administrative offices in the capital at the end of the period of the Taifas and that of the first Almoravids, does not mention it. Nor does it appear in the detailed list of functions given by the Maghribi al-Wângârâsî [q.v.] in his K. al-Wâlibârî, even though this last is in part inspired by the Andalusian tradition.

Nevertheless, the Arabic sources on al-Andalus amply attest the existence of this "magistrature of the town" from the reign of the Umayyad amir of Cordova 'Abd al-Rahmân II (206-38/822-52), who, said according to Ibn Sa'id, "to have separated the wilayat al-sâkî from the functions of the shurta called wilayat al-madina", until the crisis of the caliphate in the early 5th/11th century. The names of a good number of its holders are given by al-Makkarî, the Nafr al-tâbîn, and in the following, Ibn Hayyân's [q.v.] Muktabâs, which used the Annals of Isâ b. Ahmad al-Râzî, an author contemporary with the caliphate, testifies to the existence of two wilayât al-madínâs, one for Cordova and one for the new capital of Madinat al-Zahra. The importance of the persons holding this first charge or dignity appears from the duties entrusted to them under the amirate and the caliphate. These were diverse, and could involve policing and public order, justice, the levying of taxes and even leading armies, all of which leads one to think that there were no strictly determined duties but rather, on a basis difficult to determine for the city of Cordova, a nexus of functions varying in extent according to the confidence placed in the holder, especially as this last often piled up for himself other offices (was it as kâdî or wuzâr, or as saihib al-madina, that such a person holding these offices at the same time might lead a military expedition?).

Under the caliph al-Hakam II, the detailed descriptions of the protocollary order of official ceremonies during the years 360-4/971-5 place the wuzâr, kâdî and saihib al-madina of Cordova Dâ'far b. 'Uljmân al-Mu'fâshî immediately on the caliph's right; but since this concerns the "strong man" at this moment in the régime, it is hard to discern exactly under which title he held this preponderant role. It is nevertheless certain that the post was at this time a lofty one; on al-

SAHIB KIRAN (A. and p.), a title meaning "Lord of the (auspicious) conjunction". Kâran means a conjunction of the planets, kiran al-šâdîn [see AL-SA'ADÂN] a conjunction of the two auspicious planets (Jupiter and Venus), and kiran al-nâsâyân a conjunction of the two inauspicious planets (Saturn and Mars). In the title, the word refers, of course, to the former only. The Persian i of the šâdîn is omitted, as in šâhîd-dîl, by fâkî-i šâdîh. The title was first assumed by the Amîr Tîmûr, who styled himself 'Alî šâhîd, "the second Lord of the Conjunction". (B. Kellner-Heinkele)
Hakam’s death in 366/976, al-Muṣṭaf designated the dead ruler’s youngest son, ʿAbd al-Rahmān II, as caliph, himself assumed the office of ʿādāb biʿl-madīna (which had not been filled for several years) and designated his own son ʿādāb al-madīna of Córdova. A little later, in his brilliant ascension to the heights of power, Muḥammad ibn ʿAbd al-Rahmān al-Muṣṭaf appointed his son as ʿādāb biʿl-madīna of Córdova, after the death of his youngest daughter. Afterward, under the ʿĀmirid dictatorship, the function and title lost their importance. However, it is known that, at this time, a high prestige in government affairs was held by the title of ʿādāb al-madina, “in charge of the two cities”, i.e. Córdova and and, it is thought, the official ʿĀmirid centre of al-Madīna al-Zāhira rather than the caliphal one of Madīnatin al-Zāhira, which had no importance in practice by this time.

The fact that the office seems to have existed only in al-Andalūs poses a problem. It has been seen above that ʿAbd al-Rahmān II is supposed to have created the office. J. Vallvé, in a detailed study of the history of this function under the Umayyads, has set forth the hypothesis that the ʿādāb biʿl-madīna could derive from the come civitatis of the Roman and Visigothic period.

The idea ought to be approached with prudence. Certainly, the sources bear witness to the existence, during the Umayyad amirate, of an office of kūmis [q.v.] entrusted to a Christian, who originally had jurisdiction over the Mozarab community but who was at times the recipient of the sovereign’s confidence and given various functions, including the command of the guard, the kūbah and the collection of taxes, even involving those from the Muslims. But the pieces of evidence adduced by Vallvé himself allow us to aver that, under ʿAbd al-Rahmān II, there existed contemporaneously a kūmis of the Christians—for whom there are still some indications in the 4th/10th century—and a ʿādāb biʿl-madīna, and this makes the idea—in any case not very acceptable in the context of the Iberian peninsula under Islam—of a transformation pure and simple of the come civitatis into the ʿādāb al-madīna difficult to accept. Nevertheless, can one exclude the possibility that the change in numerical proportion between Christian and Muslim populations in Córdova in favour of the second group might, in the 9th/10th century, have led to the transfer to a newly-created office/magistrature involving administrative and judicial functions which had been, in practice, and in the context of the capital city, exercised until then by the “count” of the Christians?

Vallvé’s hypothesis endeavours to take into account an exceptional case in al-Andalūs, which is complicated by the fact that, after the Reconquista, in Aragon and Navarre at the end of the 11th and beginning of the 12th centuries, the Christians gave to the municipal magistrate appointed by the king for administering and for rendering justice in the towns, the title of justicia, but also that of zafalmedina, obviously a linguistic calque of the Arabic ʿādāb al-madīna. The same state of affairs is attested in Christian Toledo, where there existed in the 12th century a zafalmedina.

This leads one to suppose that, in the political capitals of principalities reconquered by the Christians at the end of the 11th century and the beginning of the 12th century, a high prestige in government affairs was held by the title of ʿādāb al-madīna of Córdova. After the death of his youngest daughter, Hakam’s death in 366/976, al-Muṣṭaf designated the dead ruler’s youngest son, ʿAbd al-Rahmān II, as caliph, himself assumed the office of ʿādāb biʿl-madīna...
cordance, iii, 360-1). As a leaf meant to receive a written text, the sahifa could be rolled up (tawā) or spread out (unrolled (nashara), and might often be suspended (‘allaka) e.g. from the hilt of a sword. It was meant to be read in public and put into effect like an edict or ordinance.

The Prophet, just before his death, asked for a sahifa for writing upon at his dictation (Ibn Hanbal, iii, 346; Ibn Māḍja, Ṣahīḥ, 7). This must refer to a blank piece of writing material, a leaf of parchment or papyrus.

According to the Sīra (Ibn Iṣḥāq and Ibn Ḥādhām [q.v.]), there will be a mysterious fire which will devour the unjust person but spare the one who has escaped death, whilst Tarafa perished. By getting the latter to retract his statement, Zuhayr b. Umayya, al-Muṭṭalib b. ‘Adi, Abu ‘l-Baqṭāra b. Ḥādhām and Zam’a b. al-ᾀswād, harangued the crowd in front of the Ka’ba and denounced the sahifa; but the story goes that the words of it had all been eaten away by worms, with the exception of the opening words “In thy name, O Lord!” (Sīra, ed. Wūṭenfeld, 247-51; W. M. Watt, Muhammad at Mecca, Oxford 1933, 121-2).

3. History.

The conversion of ‘Umar was a shock for the Prophet’s enemies and encouraged the first Muslims, who performed their worship at the Ka’ba itself. This conversion resulted from the discovery of a sahifa (= page) of the Kurʾān which ‘Umar had read at his sister’s house (see above). This gave rise to another sahifa, an agreement amongst the leading men of Kuraysh, a kind of resolution voted upon by the people of Mecca and posted up inside the Ka’ba.

In A.D. 619, there had taken place the emigration of many of the Muslims from Mecca to Ethiopia [see Ḥidjra; Muḥājirūn], whilst those remaining in Mecca had protection from the young ‘Umar. But in a counter-stroke, the Meccan leaders produced from their deliberations a sahifa, this event being the most important one in the history of Meccan-Muslim relations in the years immediately before the Ḥijra. A social and economic boycott of the Muslims of the Banū Ḥāḍim and of al-Muṭṭalib was envisaged, involving a prohibition of marriages with them and avoidance of commercial contacts. These two Muslim clans took refuge in their shib or ravine, on the lands of Abu Ṭālib. The boycott lasted for two or three years, during which the sahifa was posted up in the Ka’ba, but was not completely watertight. Certain citizens eventually banded together to denounce the pact, and five of them, Zuhayr b. Umayya, al-Muṭṭalib b. ‘Adi, Abu ‘l-Baqṭāra b. Ḥādhām and Zam’a b. al-ᾀswād, harangued the crowd in front of the Ka’ba and denounced the sahifa; but the story goes that the words of it had all been eaten away by worms, with the exception of the opening words “In thy name, O Lord!” (Sīra, ed. Wūṭenfeld, 247-51; W. M. Watt, Muhammad at Mecca, Oxford 1933, 121-2).

Bibliography: Given in the article.

A. GΗΕΔΙΡΑ

ŠAΗĪΗ (A.), literally, “sound, healthy”.

1. As a technical term in the science of Ḥadīth [q.v.], i.e. Muslim tradition.

It did not come into use immediately with the onset of iṣnād criticism, for al-Ḵaṭṭā‘ar muḥājiru (d. 360/970 [q.v.], who wrote the first systematic work on Ḥadīth), does not seem to have applied it yet. It is used by mediaeval as well as modern Muslim tradition experts (sometimes followed in this by some western scholars) to describe or qualify one particular prophetic tradition or a whole collection of such traditions. Sahīḥ traditions constitute one of the three major subdivisions of Muslim traditions, the other two being Ḥasan, i.e. “fair”, and ẓahīr, i.e. “weak”. The commonest definition of a tradition which is declared sahīḥ is that it is supported by an iṣnād [q.v.] which is labelled as sahīḥ, namely, one which shows a chain of transmitters going back to the Prophet in an uninterrupted manner, i.e. each pair of two transmitters in that chain must both be considered ṣad, i.e. “upright” or “honest” to the point that their testimonies are admissible in a court of law, and saḥīḥ, i.e. “painstakingly accurate”. In Arabic, it is to be understood that the words of it had all been eaten away by worms, with the exception of the opening words “In thy name, O Lord!” (Sīra, ed. Wūṭenfeld, 247-51; W. M. Watt, Muhammad at Mecca, Oxford 1933, 121-2).
not found anywhere else, nor mu’allal, i.e. marred by a ši‘a, i.e. a (hidden) defect pertaining to one pair of transmitters in its isnād. In short, a hadīth that deserves to be labelled sahih is one credited with the highest possible degree of acceptability.

Many different isnād strands received the qualification of being “the most sahih strand of all” at the hands of various early tradition scholars, but none is more famous than al-Bukhārī’s favourite strand: (al-ShaÞī‘ī [q.v.]-Mālik b. Anas [q.v.-Naṣīr [q.v.]‘Abd Allāh b. ‘Umar [q.v.-Prophet. This strand was used also to support a number of doubtful traditions, as its very frequent occurrence in e.g. the Lišān al-miṣān of Ibn Ḥadījī [q.v.] testifies. For a survey of the other strands held to be particularly sahih, see Bibl.

Tradition collections entitled al-Dārimī’s al-sahih are the canonical collections by al-Bukhārī (d. 256/870 [q.v.]), Muslim b. al-Ḥadījīdī (d. 261/875 [q.v.]) and al-Tirmidhī (d. 279/892 [q.v.]). Those of al-Bukhārī and Muslim are, furthermore, generally referred to as “the two Sahih”. Besides, the post-canonical collection made by Ibn Hibbān al-Bustī (d. 354/965 [q.v.]) entitled al-Musnad al-sahih “al-‘ālam ‘l-tartib sahih Ibn Hibbān”, ed. Kamāl Y. al-Ḥūṭ, Beirut 1987, 10 parts. Finally, there is the ear-

the post-canonical collec-

“the two Sahih”. Besides, the post-canonical collection made by Ibn Hibbān al-Bustī (d. 354/965 [q.v.]) entitled al-Musnad al-sahih “al-‘ālam ‘l-tartib sahih Ibn Hibbān”, ed. Kamāl Y. al-Ḥūṭ, Beirut 1987, 10 parts. Finally, there is the ear-

ly, mainly Ibādī [see taṣawwuf] collection of al-Rā‘ībī b. Ḥabīd (ca. 170/785) which is sometimes called al-Ḍārimī’s al-sahih.

2. In law.

In Islamic law, a legal act is regarded as valid, i.e. having its desired legal effects, if all its essential elements (rukn, pl. arkān) are present and the necessary conditions (ṣḥār, pl. ṣḥūr) are fulfilled. If one or more of these elements or conditions are lacking, the act is null and void (fāṣid or bā’il [q.v.]), therefore does not exist and has no effect. This classification applies to acts of devotion (‘ibādah) as well as to acts of secular law (muṣ‘alāt). With regard to the former, the desired effect is being acquitted of an obligation, which will result in reward in the Hereafter. Thus an obligatory sahih [q.v.] performed in compliance with the prescriptions, is valid, counts as the discharge of a duty and will be recompensed after one’s death. Similarly, a repudiation duly pronounced according to the rules is valid and produces its legal effects such as the dissolution of the marriage and the beginning of the period for the filing of a divorce (‘idda [q.v.]). Valid acts are not necessarily binding (ḍāṣan). Most schools recognise as valid suspended (muḥāṣṣah) acts, i.e. legal acts that have no obligatory effect until after their ratification by a third party, such as acts performed by an unauthorised agent (fudālī) or a discerning minor (mumayyiz). In order to be binding they have to be approved by the principal or the guardian. They are classified as valid because, after ratification, they are regarded as having bound the principal or the minor from the moment the original act was performed.

(R. Peters)

3. In grammar.

Here, sahih usually refers to the “sound” letters, loosely the consonants of Arabic, defined by default as being neither “weak” letters, mu‘alla, viz. the semi-

vowels alīf, waw, yā [see ḥurūf al-muḥāṣṣah], nor vowels, viz. fa’āla, kasra and damma [see ḥarakat wa-

ṣūkūn, kasra]. The criteria of soundness and weakness are purely phonetic and date at least to the 2nd/8th century; Sībawayhi (fl. 170/786 [q.v.]) and al-Khaṭīb b. Ahmad (d. 175/791, e.g. Kitāb al-ʾAyn, i, 51, 57, 59) both use saḥīḥ and mu‘alla. The soundness of a letter (sc. phoneme: kaf [q.v.]) denotes grapheme and phoneme alike, which does not imply that the grammarians overlooked the distinction (lies in its stability in all vocalic environments, unlike the weak letters, which are unstable between and after vowels, and in its organic difference from the vowels, which are articulated without any inter-

ruption in the air stream, while the sound phonemes, continuous or plosive, always involve some constric-

tion. The morphophonological implications of these articulatory features were minutely observed by the grammarians, who described in detail the various allophones and such sound-changes as assimilation (ṣīḏām [q.v.]), dissimilation, metathesis and substitu-

tion (baddāl [q.v.], and see al-Nassir, Bakalla, Bohas and Guillaume). On the morphological level, a verb stem containing no weak radicals is called a “sound verb” fi‘l saḥīḥ (or fi‘l ʿālam), with much inconsistency regarding the place of hamza in this scheme, and the “sound” plural is likewise al-ḍāmāl al-sahih as well as the more usual al-

ḍāmāl al-sālim. It has been noted that saḥīḥ in later grammar may also denote a “correct” utterance (Versteegh, 34), a possible logical origin is hinted at (al-Ridā “the limitist”), the case kalām saḥīḥ is already found in Sībawayhī, Deren-

bourg, i, 353, Būlāk, i, 400. More important than origins, however, is the still unexplored peculiarity that the same grammatical term may occur at different levels of analysis, indicating an approach to terminology fundamentally at variance with modern linguistic conventions.

(M. G. Carter)
The term has various regional applications, in accordance with the meaning "fringe area, zone".

1. **In the Maghrib.**
   (a) The Sāḥil of Tūnisia (Sāḥil of Sousse, Sāḥil of Sfax). This is the coastal region of the low steps of the north, around the towns of Sousse, Monastir and Mahdia, having a maritime climate and rainfall in excess of 300 mm per annum and characterised by the importance of its olive groves and the antiquity of its urban network.
   (b) The Sāḥil of Aģer ġallia. This is applied to the coastal regions of Algeria, mainly those around Algiers and Oran.

2. **To the south of the Sahara.**
   The Sāḥil (in the best known sense of the word) here is defined by the Arabic authors as a southern "shore" of the Sahel, here compared to a sea. The term was taken up in 1900 by the botanist Auguste Chevalier, who pointed a question in West and Central Africa of increasingly humid zones called Saharan, Sahilian, Sudanian and Guinean.

The Sāḥil zone thus delimited includes several African states, from west to east: Senegal, Mauritania, Mali, Burkina Fasso (Upper Volta), Niger, the northeastern extremity of Nigeria, Chad and the Sudan, with an area of about 4 million km². The term is, however, used above all for the central and western part, from Tiberis to the Atlantic Ocean. The Sāḥil does not have any well-marked physical features. Like all the Sahara [see AL-SAHRAN], flat surfaces predominate, either in the form of plains resulting from the levelling of the ancient pre-Cambrian shield, making up the main part of the countryside and interrupted by rare inselbergs, or else in the form of essentially sandstone plateaux edged with abrupt slopes making up striking relief features, such as, from west to east, the Tagant and Assabha, the plateaux of Bandiagara and the Hombori, and the Ennedi massif. Really mountainous masses are rare, apart from the volcanic one of the Djebel Marra in the Sudan, reaching 3,000 m/10,000 feet. Within this little-differentiated topography, the surface is often abundant or else made up of eroded plateaux of terrain (several dozen km), and increasingly flattened by water erosion as one goes southwards. Oriented ENE-WSW, and covered with reddish sands, these bands are separated by gullies between the dunes, e.g. the ergs of Trarza and Cayor in Mauritania, the Gourma to the south-east of Timbuctu, the Azaouak to the south-west of the Air, the Daza and Djourab to the north-east of Lake Chad and the Goz of Sudan. These ergs are the remnants of important climatic variations which have taken place over the last millennia, and have sometimes brought about an important advance of the desert southwards and the fixing of sand dunes, and at other times a retreat of the Sahara northwards accompanied by a considerable extension of Lake Chad and the overflowing of the Niger northwards, as was the case during the period 8,000-2,000 B.C., with the reversion to conditions identical with those of the present time having lasted hardly more than 3,000 years. Over the Sāḥil zone in general, there is shrubby steppe land in the south, becoming bushy in the north, with a weak vegetation covering index, and which is more and more open as one approaches the Sahara. Large, allogenous rivers—the Senegal, Niger, Chari and Nile—bring into the region waters which are often abundant.

The absence of topographical boundaries leads one to describe the Sāḥil as the zone of transition between the Sahara and the more humid regions of tropical Africa. Hence it can only be delimited by means of climatic characteristics, much discussed by writers; thus Ch. Toupet considers as Sahilian the band of terrain comprised between the annual mean isohyets of 100 mm in the north and 700 mm in the south, whilst Y. Pehaut limits it to the 150-200 mm band in the north and the 600 mm one in the south. This "climatic" definition is further complicated by the importance of variations in precipitation over the course of the years. The great droughts affecting the Sāḥil since 1967 have brought about displacements of the climatic zones towards the south by several hundred kilometres, and extensive changes for the worse in the natural habitat, worsened by the increases in population and their herds and by the fragility of the sandy soils of the ancient ergs; during years of greater rainfall, the Sahara-Sāḥil boundary retreats northwards, but the deterioration of the habitat is often irreversible and never completely restored. These droughts are due to the marginal position of the Sāḥil in relation to the inflow of rainfall. The Sāḥil in general is characterised by the alternation, in the course of each year, of a long dry season during which the northerly trade-winds (called Harmattan when they are continental) and a rainy season corresponding to the influx of humid air of the summer monsoons originating in the Atlantic Ocean (Gulf of Guinea). These monsoons, fairly abundant in the southern part of the Sāḥil, become more and more feeble and irregular as one approaches the Sahara.

The population of the Sāḥil is characterised by a marked decrease in density as one goes from south to north and by the mixture of "blacks" and "whites", more or less Islamised, with a distribution only explicable by what it has been possible to piece together of the history of the region and of the great empires which dominated it, poorly known for the central and western Sāḥil. The first empire, that of Ghāna [q. v.], which extended from the southern Sahara as far as Guinea, was described in 1068 by al-Bakri in his description of West Africa. It was interrupted in the 5th/11th century by the arrival of the Almoravids [see AL-MURABITUN], who came from southern Morocco and created an empire stretching from al-Andalus to the western Sāḥil; this did not last, but brought Islam and the Arabic language to the region. In the 7th/13th century, a new empire, that of Mali [q. v.], arose, from the Sāḥil to the tropical forest, in the bend of the Niger. After its apogee in the 8th/14th century, it was supplanted a century later by the Songhay empire, whose capital Gao was destroyed by an expedition sent from Morocco in 1591. At the same time, around Lake Chad, the dynasty of the Safawa reigned from the 3rd/9th to the 13th/19th century with various fortunes.

In all these regions, the penetration of Islam was achieved essentially in peaceful ways, favoured by the great empires based on commerce, and whose ruling classes showed themselves fairly tolerant. It was often the nobles and urban populations which became converts, whilst the rural populations, making up the mass of the people, remained animists. This penetration was equally the work of numerous Muslim traders involved in the trans-Saharan commerce, involving above all the export of gold, for which the
Sudan was the main world producer, to the Mediterranean countries, and the slave traffic, which had for long been important, to the lands of the Maghrib. It was likewise favoured by a general movement, since the Middle Ages, of the sedentary black populations, pushed southwards by nomads who were Muslims, and possibly by a deterioration in climate.

The present-day population of the Sahil shows a complex pattern of overlapping peoples, including societies often strongly hierarchical in social structure, which can be distinguished by their ways of life: the pure nomads, found especially in the northern Sahil, corresponding to the southwards extension of the great Saharan groups: Moors in the west, Touaregs in the centre and Tubus in the east. The semi-nomads, like the Kreda to the east of Lake Chad, regularly increase proportionately, and possess palm-groves or practise stock-rearing and an extensive agriculture at the same time, sometimes organising the transhumance of their herds under the care of herdsmen. The Peuls or Fulbe, a people whose origin is badly known, belong to this category, whilst practising stock-rearing of bovines which are more of a social value than one of food supply. Finally, the cultivators, mainly blacks, have great difficulty in practising dry farming in a climate with such feeble and irregular rainfall; the cultures utilising river water along the great waterways depend on the volume of the flood waters, and irrigated systems of agriculture remain rare. Within these activities, formerly highly hierarchical, recent political changes have brought a reversal in the strength of forces; the nomadic Saharan tribes, which were formerly dominant through their razzias and through the slave traffic, have found themselves ruined by the drought, the disappearance of the great caravan traffic and the collapse of socio-economic systems, and to a subordinate extent, to a political authority in the hands of the sedentary black populations, more quickly susceptible to education.

The peoples of the Sahil have often been severely affected by the great droughts which have adversely affected their modes of life at a time when they have been demographically increasing—e.g. it has been estimated that the population of Senegal has increased from one million at the beginning of this century to 7.5 millions in 1990—and the increase in ca. from one million at the beginning of this century to estimated that the population of Senegal has increased been demographically increasing—e.g. it has been affected their modes of life at a time when they have populations, more quickly susceptible to education. Turkish literature, their language remained complex, their religious preference he was a Shi’i (al-Damlri, Haydn, ii, 373-4). However, he seems to have favoured, as many learned men of his

with much use of the Persian and Arabic lexicons, the use of traditional love themes and writing in ‘arâd, i.e. the traditional metres of poetry. He left the Faculty of Law in Istanbul after two years and in 1903 was employed at the Foreign Office. After Feğri-i âti dissolved itself, Sähir wrote for the journal Gend kalemler (“Young Pens”) during 1911-12, this being the voice of the nationalist movement, advocating use of the national language and a national literature. During this time, Sähir wrote with the syllabic folk metre of ‘ırs (Tarîkû, edebiyat, 1908) and ‘ırs (Tarîkû, edebiyat, 1908). He left the Foreign Office and first taught literature in high schools but later became a merchant. He acted chiefly as the founder or editor of various periodicals as well as writing in them (Seyyâre, Demet, Kitâblâr, Türk Yurdu, Bilgi, Khâlqa Dogru and Türk Sûzü). These journals were mostly devoted to the promotion of Turkish nationalism during the war years. Kitâblâr, published in the 1920s, were monthly books containing poems, plays, short stories called Birindji kalemler, Cekezindji kalemler. He was appointed as a member of the Commission for Language Reform and became a member in the National Assembly for Zonguldak in 1928. In 1932 he was among the founding members of the Türk Dili Tercüem Cemiyeti. He died in 1935 in Istanbul, having married three times and having six children.

Sahl B. Hârûn b. Râhawayh (or Râhâyûn, Râhûn, Râmmûn), Persian author, translator, and a poet of great repute who wrote in Arabic in the early 'Abbasid period and died in 215/830. He was born in Dast-i Maysan or in Maysan [q. v.] in south-eastern Iraq. His family, originally from Nîshâpur, had moved to Iraq, and he was born in the region and then to Babylon, whence his nisba al-Asrâf.

The period of his youth and early education remains in obscurity. He attracted public attention first as the secretary of Hârûn al-Râghid’s vizier Yâbîyân b. Khâlid al-Barmaki (170-87/786-803). Under Yâbîyân, he was charged with the distribution of certain public payments (Ibn Abdrabbâh, v, 38). He survived the fall of the Barmakids, became an intimate of al-Râghid and acted as his sâhib al-dawâwsîn (Ibn al-Abbâr, lîst al-ktab, Damascus 1961, 85-6). It is not known whether he held this office under al-Amin, although during the pursuing civil war and fratricide which ravaged Baghdad, he remained in the capital and had contact with al-Amin’s vizier al-Fadl b. al-Rabî (al-Dâhîz, Bûyûn, i, 346). Under al-Ma’mûn he was bound to al-Hasan b. Sahl [q. v.], and served him primarily as the director of the House of Wisdom (bayt al-kitâb [q. v.]).

Early literary tradition portrays Sahl as the foremost partisan of the Shûbûbiyya [q. v.,] though by religious preference he was a Shî’i (al-Damiri, Hâyûn al-hayyûun, Cairo 1887, i, 313). The story known as “Sahl’s rooster”, related by the zealous Shî’i poet Dîbill al-Khuzâ‘î [q. v.], confirms his ties with the Shî’is (al-Dâhîz, Hâyûûn, ii, 374-5). However, he seems to have favoured, as many learned men of his
SAHL B. HARUN

839
generation did, the Mu'tazil doctrine and is mentioned next to its leading mentors Abu '1-Hudhayl, al-Nazzam and al-Djahiz (al-Djahiz, Hayawan, vii, 182, 206; al-Tha'alibi, Thanda al-kalib, Cairo 1965, 172).

Sahl found an ardent admirer and friend in his younger contemporary al-Djahiz, who praised him as a trustworthy gentleman not shy in defending the truth even to his own loss; a superlative orator, master of rhetoric and style, author of many treatises and voluminous books (Bayân, i, 52, 89). Still more warmly Abu '1-Aynâ' [q. v.] wrote of Sahl the worth of the world by letting him be one of its residents" (al-Tawhîdi, al-Basî'a wa l-'dha'khîr, Damascus 1964, iii, 326 n. 1).

In his own time Sahl became outstanding in eloquence and learning. And wrote books in challenge of Arab-Islamic practices. His description of the qualities of the chamberlain, hâdjîb [q. v.], was based perhaps as much on personal experience as on the lost Sasanid book Șabdî or Șâkînî (al-Djahiz, Rasâlî, ii, 39). In Sira al-'Ammân (Ibn Nubâta, 242), Sahl treated topics common to Siyar al-mulûk which describe royal customs of the Persian kings, dignitaries and heroes. Al-Tabarti's long passages on the rise of rivalries between the two brothers al-Amlîn and al-Mâmun, and anecdotes about al-Ma'mûn recorded on Sahl's authority in other sources, may have had their origin in this book. His treatise on jurisprudence and the function of the kâdi [q. v.], Risâla fi 'l-Kadâd, addressed to the Persian jurist and judge of Bâṣra 1sâ b. A'bân b. Sâdakâ b. 'Adî b. Mârdãngâhâ of Fâsâ (in office from 211/826 until his death in 220/835), echoed his experience in judicial matters and legal interpretation.

Among Sahl's many translations was the romance Wâmîk and Aţfûdha which was supposed to have been compiled at the time of Anûshîrwan and presented to him. The famous verse on the wall of Kaşr-i Shirin Palace, which pertains to the time of Khusraw Parwiz (590-628), is a direct reference to this romance (Rypka, Iranische Literaturgeschichte, Leipzig 1959, 132-3), but was also mentioned in al-Djahiz's Kitâb al-Bukhald and translated by Abdelkader Mehiri, An-Nâmî wa-l-Khâtâb, 1968, i, 52, 58, 77, 89-91, 197, 238, 243, 332-3, 346, ii, 39, 43, 74, 104, 195, 196, iii, 29, 352, 373-4, idem, Bukhald, Cairo 1958, 9-16 (= Risâla fi 'l-
Bukhār), 1, 5, 21, 40, 43, 93, 106, 130, 154, 182, and the editor's notes 268-71, ... fols. 35-
43). The two works attributed to al-Tustari and the considerable body of anecdotes and sayings quoted on

 Shortly after his death in Baṣra, al-Tustari's direct disciples split into two groups (cf. Bowering, Mystical 
vision, 75-99). One group selected Baghdād as the centre of activity, either joining the Sunnī circle of al-
Djumayy [q. v.] as did Abū Mamīn al-Djurayry (d. 312/924) and Abū 'l-Hasan Ṭallī who also
were inspired by the teachings of Abū Bakr Muhammad b. al-
Shāfi‘ī, Tābākāt, i, 67).
his authority in the Sufi primary sources give a fragmentary yet substantive picture of al-Tustari’s mystical theory and practice. The central idea of al-Tustari’s mysticism is the Sufi line of dhikr (al-ghāthah [al-tawba, al-tawfiq], which he put on a firm theoretical basis. All his life he observed the method of recollecting God by repeating a mental prayer, “God is my witness” (Allāhu ʿalā kum), by which the mystic is enabled to anticipate God’s final self-revelation (tajjud) as experienced in the beatific vision. Al-Tustari found the basis for his idea of tajjudī in Kur’ān, XLIII, 70-2, a reference to the people of paradise, rather than in the Kur’ānic reference to Moses, who was unable to bear the sight of God’s revelation (VII, 143).

There are only fragmentary source texts illuminating al-Tustari’s resolution of the central problem of Muslim mysticism, the relation between divine omnipotence and human responsibility. Al-Tustari’s thought attempts to achieve a conjunction of opposites and foreshadows Ashʿarī themes. However, these themes may have been introduced into his Taṣfīr al-Kur’ān by his disciples in the aftermath of al-Ashʿarī’s [q. v.]. God creates both good and evil and possesses two kinds of will, volition (maʿṣūla) and an express will (niyya). Since human action is caused by the divine agency, God has to possess divine foreknowledge (ʿilm Allāh al-sīḥā) of it prior to its occurrence. God’s providence (adhūn), made explicit in His command (amr) and interdiction (naḥy), runs parallel to God’s guidance (ḥidāya), made explicit in His help (maʿāmīna, also termed wulāya) and protection (ṣīma). When man performs an action in conformity with the divine Command and interdiction, he is granted the divine succour of God’s maʿāmīna, i.e. divinely given success (taufık). Should he commit an action in opposition to the divine Command and interdiction, man places himself outside the divine custody and is deserted by God, who withdraws His ṣīma and forsakes man (ḥishādān [q.v.]). It is man’s duty to turn to God with thanksgiving when he performs a good deed (ḥaana) and to seek God’s succour through repentance when he commits an evil deed (ṣayyā). Whether man conforms to or opposes the divine Command and interdiction, in each case the action comes from God although it is executed through man and by man (minhu bihim wa-lahum, see Böwering, Mystical vision, 175-84).

Kodja Sinan [see SINAN], or
The holder is called masahim. Sahm, unlike the com-
ication law because it contains no interest. According to al-
Kardawi, zakat is only required on self-generating
shares in companies that do not change the essence of
their trading commodity, like import-export com-
panies or dealers in crude oil. The shares in these ex-
amples are seen as the actual active capital, therefore
they are liable to zakat. Zakat is not paid on shares
which do not generate profit directly. An example of
this is shares in companies that provide public ser-
ices. However, Abu Zahra, 'Abd al-Rahman Hasan and
'Abd al-Wahhab Khalil maintain that all shares should be
treated as ordinary capital. With regard to trading in
ahum, it appears to be a de facto practice in most
Muslim countries, including Saudi Arabia and the
Gulf States. This is despite the fact that Islamic
law views it with suspicion, liketing it to gambling
(maysir [q. v.]) and prohibited speculation.

**Djurjani, Abu l-Kasim (b. at an unknown date towards
the middle of the 4th/10th century, d. 427/1038 at
Nishapur), traditionist and legal scholar.**

A native of Gurgan [q. v.] in the Caspian coastlands,
where he was a khalif and preacher, his major work,
and apparently the sole surviving one, is his Tauri^ib
Djurjani or Kutab Ma'surif ulam^a aht Djurjani,
especially a rigd^al [q. v.] work devoted to the scholars
and muhadditun of his native province, to which is prefixed
(ed. Haydarabad 1369/1950, 4-18) a brief historical
introduction on the Arab conquest of Gurgan and its
Arab governors. His information on the scholars of
Gurgan was subsequently used by later writers such as
al-Sam^ani, Ibn 'Asakir, Yaktki, al-Dhabab [q. v.], etc.
Hadjiji Khalifa also mentions of his work a T.
Astarabab and a K. al-Ar^abin fit Jad'dul as-Ashabi, whilst
his Su'dat 'an al-Hajj in al-Dar^akun [q. v.] is quoted
later works on hadith.

**SAHN-I THAMAN or MEDARIS-I THAMAN**

**The eight madresses or colleges [see MADRASA] founded-
by the Ottoman sultan Mehmed II [q. v.] as part of the
ancillaries to his great Fatih Mosque, the whole
forming a külliye [q. v.] or complex.**

The külliye was begun in 867/1463 and completed
in 875/1471, and the architect responsible was one
Sinan, called variously "the Elder", to distinguish
him from the great architect of the following century,
Koca Sinan [see Sinan], or 'Atik or Asadi "the freed-
man", implying that he had been of non-Turkish
slave status. The eight madresses were situated to the
east and west of the Mosque, the first group of higher
madresses being called the Aqgediz or "Mediterranean"
group and the second one the Karadeniz or "Black
Sea" group. There were further, lower (Tatimme
madresses, a hospital, an 'imaret [q. v.], a tibkahi
or hospice, a library and the two tombs for the sultan
himself and his wife Glibbahir Sulian, in the complex.

Each of the Sahm madresses had domed rooms (hurjeis
and a lecture room, with a total of 120 rooms for resi-
dent students who, according to the tibkahi for the
whole complex, had a stipend of two akces a day; there
were also day students, of which the 19th century historian Ahmed Djewdet Pasha [q.v.] was one (Tedhdkir, iv). The basic stipend of the madrasa was 30 akce a day. Little definite is known about the organisation and curricula of the Teimme medreses; their buildings have now disappeared, though those of the Şahn-i Thamun survive.

The Şahni Thamun produced a large number of scholars and jurists, some of whom played leading roles in the Ottoman state and society; like most of the surviving buildings in the complex, it was much restored and rebuilt. Although not common, the name Şahnun (cf., possibly, the diminutive of the form fašin, which expresses affection, as in Khulедин, Zaydun, Sađun and Hamdun) is attested throughout the Muslim West, in Spain (Ibn Hayyān, Muktabās, Paris 1937, 79, 81, 113), in the central Maghrib (Brockelman, S II, 715), and at Kairouan, where another faš (decisive influence on him: Buhlul b. Rashid (d. 95)). From Sahnun’s questions to the latter, his beard, long hair, large eyes and broad shoulders” (Tabi, op. cit., 95). He wore a string of beads around his neck; in the countryside he wore a woollen tunic, with a towel around his head; and in the town, in winter, he dressed in a black burnous. He is known to have had a daughter, Khadijja, who remained a spinster and whom he held in the very highest of regard, and a son, Muhammad, whom he educated with care and who became in his turn a brilliant faš (nicknamed Sahnun, it is said, on account of his shrewdness, or from the name of a bird), a Kairouan spinster and whom he held in the very highest of regard, and a son, Muhammad, whom he educated with care and who became in his turn a brilliant faš.

Although not common, the name Şahnun (cf., possibly, the diminutive of the form fašin, which expresses affection, as in Khulедин, Zaydun, Sađun and Hamdun) is attested throughout the Muslim West, in Spain (Ibn Hayyān, Muktabās, Paris 1937, 79, 81, 113), in the central Maghrib (Brockelman, S II, 715), and at Kairouan, where another faš (decisive influence on him: Buhlul b. Rashid (d. 95)). From Sahnun’s questions to the latter, his beard, long hair, large eyes and broad shoulders” (Tabi, op. cit., 95). He is known to have had a daughter, Khadijja, who remained a spinster and whom he held in the very highest of regard, and a son, Muhammad, whom he educated with care and who became in his turn a brilliant faš (nicknamed Sahnun, it is said, on account of his shrewdness, or from the name of a bird), a Kairouan spinster and whom he held in the very highest of regard, and a son, Muhammad, whom he educated with care and who became in his turn a brilliant faš.

Many of the Kairouanese masters, including Asad b. al-Furat—who ultimately sided with the party of the Hanafs, had studied directly under Mālik [q.v.], and it was with them that Şahnun served his first apprenticeship. Two of his masters exerted a particularly decisive influence on him: Buhlul b. Rashid (d. 183/799), who was more of an ascetic than a faš, and most of all the Tunisian ʿAli b. Ziyād (d. 183/799) who had been the first to introduce the Mawwatt of Mālik into Irfiyya. All that remains of his version is a fragment recently edited by al-Shadhilli al-Nayfar (Beirut 1980, 1984).

Şahnun made his way to the East, for purposes of ṭihla, to complete and perfect his education, either in 178/794 or in 188/804. The latter date is by far the more plausible. The list of his masters includes 21 names; among these, the figure of the disciple of Mālik, the Egyptian Ibn al-Kāsim al-ʿAtaki (d. 191/807), stands out prominently. Asad b. al-Furat (d. 212/827) had already preceded Şahnun in visiting Ibn al-Kāsim. From Şahnun’s questions to the latter,
starting from a Hanafi outline, and after discussion, the Asadiyya was born, the fruit of a compromise, of the Great Mosque, until he died. This death, allegedly, weighed heavily on his conscience, but this did not come to an end, and another began: that of masā'il, of prepared solutions. It was a sort of code which responded to a pressing need and arrived at the right time.

Armed with a copy of this book, obtained by not the most scrupulous of means, Sahnūn took the road to Fustat in his turn. His return was to last three years.

Under the direction of Ibn al-Kāsim the Asadiyya was submitted to a new analysis, in a spirit of greater fidelity to the teaching of Mālik. Sahnūn gave the text thus revised the title of Mudawwana, a name borrowed from another disciple of Mālik, Aḥšāb (d. 204/819). Barely had it become known when the Mudawwana—term is currently employed in Morocco with the meaning of code—eclipsed the Asadiyya completely. As evidence of this eclipse, only a few pages of the Asadiyya survive, while the Mudawwana has been the object of numerous commentaries and summaries [see Mālikiyya, vol. VI, at 278b]. Its influence was decisive in the crystallisation and diffusion of the madhhab of Mālik throughout the Muslim West, as is proved by the fact that the Almohad caliph Abū Yūsuf [q.v.], in his attempt to eradicate Mālikism, consigned the work to the flames, thus paying it the ultimate tribute. The Mudawwana was edited in the name of Mālik, Sahnūn's recension after Ibn al-Kāsim (Cairo 1323/1905-6).

Like Asad, Sahnūn had begun his career teaching the Kur'ān to children in a building (bayt) rented for this purpose (ʿAbd al-Ḥamīd al-Munīf, Adwarat Muhammad b. Sahnūn, in al-Naqra al-tīmiyya li-l-Kulliyya al-Zaytuniyya, Tunis 1982-3, vi, 239). On his return from the East in 191/807, henceforward enjoying the prestige of the master was consolidated, students" (Talbi, op. cit., 119). Some slept openly. The master did not object, considering that even thus they were gaining the benefit of samāʾ (audition). The popularity of his courses is clearly illustrated by the fact that miraculous phenomena were associated with them; it is related in all seriousness that the djinn themselves attended them.

In certain circumstances, prestige inevitably attracts controversy. Having become, with advancing age and after the death of Asad, the undisputed leader of Ifrīkiyya, Sahnūn also became a legitimate target. In 487/1105, the old quarral regarding the nature of the Kur'ān—created according to the Muʿtazilis, uncreated according to the Sunnis—became suddenly acrimonious. In Baghda, al-Wāthik declared his hostility towards the Sunnis while in Kairouan, Abu Dja'far Aḥmad, who had usurped power at the expense of his brother, the amir Muhammad I, seized the opportunity to kill two birds with one stone, bringing his policy into line with that of the caliphate, as was traditional, and at the same time offering pledges to the Muʿtazilis who had supported him in his confrontation with the Sunnis. Aḥmad b. Nāṣr, a fervent representative of the doctrine of the uncreated Kur'ān, was executed in Baghda by al-Wāthik personally in Shabaʿb 231/April 846. The following month, Sahnūn, who had taken refuge in the riḥla of Kāsir Ziyād in the Sahel, was arrested and transferred to Kairouan. A trial took place in the Palace in the course of which the Muʿtazilī kādī Ibn Abi ʿl-Djawād, who had held this post for eighteen years and had sided with the usurper, demanded his execution. More fortunate than Aḥmad b. Nāṣr, Sahnūn was merely placed under house arrest. This did not last long; the following year the amir Muhammad I regained power, sent his brother into exile in the East, dismissed his kādī Ibn Abi ʿl-Djawād and, in accordance with the movement which had begun in the East with the accession of al-Mutawakkil, practised a policy of reconciliation with the Sunnis.

It was in these circumstances, and after protracted negotiations, that Sahnūn was appointed kādī, with full powers (Monday, 4 Ramaḍān 234/1 April 849). He was then 74 years old. He was elevated to this post by a Sunni council that had been formed in the Sahel by the support of the Hanafi faction, who were then broadly in the majority, and of their leader Sulaỳmān b. ʿImrān. As a means of consolidating the Sunni consensus, Sahnūn involved the latter in the exercise of his functions, and began taking important measures designed to strengthen Sunnism and to reinforce the power of the kādī. For audiences he set aside a special room to which only plaintiffs were admitted, having submitted a written application, in person and in turn, without the option of being represented by third parties, whatever the social rank of the applicant.

Released, as was to be expected, by the authorities, the Muʿtazilī Ibn Abi ʿl-Djawād, son-in-law of Asad, was placed under arrest, officially on a charge of financial embezzlement, something which the accused persisted in denying until the end. Naturally, the underlying motive for the indictment was otherwise. In addition to personal motivations, Sahnūn had decided to strike a blow against heresy. He was in fact, so it is related, very severe in his opposition to the innovators (ahl al-bidaʾ), of whom Ibn Abi ʿl-Djawād was not one of the least. Day after day, with the object of extorting the desired confession from him, Sahnūn had him flogged in the courtyard of the Great Mosque, until he died. This death, allegedly, weighed heavily on his conscience, but this did not
deter him from pursuing energetically his policy of the repression of heresy, in other words the censure of the leaders of heretical sects. This was one of the greatest architects of the exclusive supremacy of Sunnism in its Maliki form throughout the Muslim West. He dispersed the sects of the ahl al-bida’ (Mukaddima, i/1, 5). He was one of the greatest architects of the exclusive supremacy of Sunnism in its Malik! form throughout the Muslim West.

The name of Sahnun remains associated with the definitive triumph of Malikism throughout the Muslim West, a triumph which Ibn Khaldun, as a sociologist, explains by reference to Bedouinism (Representatives of 1956, 810-11). This explanation does not take account of the fact that it was Hanafism which enjoyed a broad majority at the outset. In the reversal of the situation, it is therefore necessary to stress the exceptional role played by Sahnun. At his initiative, and by means of his prestige, Kairouan became a major centre for the study and diffusion of Maliki fiqh. He left, it is said, some 700 disciples, all of them “truly shining lights in their respective towns” (Tabakdt, op. cit., 133). His mausoleum, in the outskirts of Kairouan, is the object of constant veneration.

But Sahnun was not only a great faqih. His knowledge was matched by his piety, and by a life which was austere to the point of asceticism. Although wealthy—at the end of his life he possessed 12,000 olive-trees (ibid., 165)—he disposed of his income in the form of alms and continued to live a life of poverty. He was easily moved to tears, and frequently sought seclusion in the ribat of Kash Ziyad. Rather curiously, and in a manner contrary to much of Tradition, he preached a version of monasticism: “If one can get by without a wife,” he said, “it is preferable to renounce marriage” (al-Maliki, op. cit., 364). “In him there were qualities,” wrote Abu ‘l-I-‘Arab, “which were not to be found combined in any other: perfect knowledge of the law (fiqh), sincere piety, rigour in the application of justice, contempt for temporal things, simple tastes in food and clothing, generosity. And refusal to accept anything from princes” (Tabakdt, Aligiers 1914, 101).

Sahnun was a great master of fikr and also a man of rigorous and demanding ethics. It is this which explains his success, and the constant veneration in which he is still held.

1. History of the term.

The Arabic authors provide only fragmentary and often vague items of information on the Sahara. The only region which they know with some precision is the northern zone, bordering on Ifrikiya and the Maghrib, the zone within which Ibn Khaldūn (Hist. des Berbères, ed. de Slane, i, 190) includes the Tafillalt, Touat, Gourara, Fezzan and even Ghadāmīs. These authors further disagree on the boundaries of the Sahara. Thus al-Bakrī asserts that the sands mark the beginning of the "land of the blacks" (Ma‘dīlīk, Algiers 1911, 21, tr. de Slane, 49). Ibn Khaldūn, on the contrary, states that this land is separated from Barbary by a vast region formed from deserts "where one risks dying of thirst". One also finds here and there some information on the parts of the desert crossed by caravan routes (e.g. on the western Sahara; cf. the description of the desert called Nisār or Tisar by al-Idrīsī, Yusr by Abu Tīfīdat) or on certain trade centres like Tadmakka and Awdaghust (q. v.) (al-Idrīsī, Tisar by al-Idrīsī, Yusr by Abu Tīfīdat) and sometimes more recent (the great inselbergs of the Tademait plateaux to the north of In Salah, and the recently-formed hamādjas of the southern piedmont region of the Sahara). The greater part of these surfaces is covered by the ergs hardly cover more than one-sixth of the area of the Sahara, even though they may at times make up very extensive ensembles like the Great Western Erg (ca. 80,000

2. Boundaries.

The present-day Sahara is bounded on the west by the Atlantic; on the north by the chains of the southern Atlas from the Moroccan High Atlas to the hills of Gafsa in Tunisia; then by the Mediterranean, then Libya (apart from some better-watered areas of the southern Atlas from the Moroccan High Atlas to the Atlantic; on the north by the chains of the desert of the Lamta [see LAMTA], bounded on the desert of the Lamta in the west, the desert of Sidjilmasa [q. v.] and to the north by Touat, Gourara and the Mzab [q. v.] and to the south by the kingdom of Agades; (4) the desert of the Lamta [see LAMTA], bounded on the north by the deserts of Ouargla and Ghadāmīs, and on the south by the deserts which stretch as far as Kano; and (5) the desert of the Bardawa, that between the desert of the Lamta in the west, the desert of Awjilah in the cast, Fezzan to the north and Bornu to the south (tr. Schefer, iii, 207 ff.).

3. Physical geography.

(a) Climate and vegetation. The Sahara is characterised above all by its desert climate, linked to the great anticyclones which often fix themselves there. The great scarcity and irregularity of rainfall, as well as its pronounced isolation, make the southern part of the region one of the hottest of the globe, where the average annual temperature can reach 30°. These two factors join together to make the air extremely dry and to bring about intense evaporation, even if there are notable differences between the central region of the desert and its fringes; on the periphery, rainfall, though feeble, arrives at least once a year, and the action of water running, favoured by the absence of vegetation cover, remains the predominant factor modifying the natural milieu in the semi-arid and arid areas, when these are not too pronounced; the steppe lands to the north, more complex in the Sāhil (q. v.) to the south, mark the transition to wetter regions and form milieux relatively more favourable to human activity and to pastoralism. It is only in the central part of the Sahara that the action of water becomes negligible in the areas which are completely arid and hyper-arid; effective rainfall there is so rare, and separated in time by several years, that the action of temperature and, above all, that of the wind, becomes the essential factor making for erosion of a virtually fixed environment, such as can be observed in the great plains of Tanezrouft on the Algerian-Mali frontier and of Ténéré on the Algerian-Niger frontier, or in the saïrs of southern Libya. In the desert proper, vegetation is extremely sparse, apart from in certain wadi beds where some spiny trees manage to maintain themselves by deriving water from deep underground.

The abundance of prehistoric artefacts in the most desolate regions of the Sahara point to the region having undergone climatic modifications. Since the beginning of the Quaternary, it has been affected by alternate phases of humidity and dryness connected above all with changes in the earth's orbit. The last humid phase, the better known, took place mainly between 6,000 and 2,000 B.C. It affected the whole of the Sahara, and conditions were clearly more favourable, as shown by frequent traces of lake-dwelling sites which allowed the installation of Neolithic peoples throughout almost all the desert. These peoples covered the sandstone rock faces with numerous carvings and paintings depicting the fauna of wet zones.

(b) Relief. The mountainous massifs, even if at times important, cover only a small part of the Sahara. They number three. The Tibesti (21° N, 18° E), the most extensive and the highest, reaching 3,400 m/10,300 feet; the Hoggar [see AHAGGAR] (23° N, 6° E), slightly lower at 3,000 m/9,000 feet; and the Air (18° N, 8° E), only reaching 2,300 m/7,000 feet. Other massifs, such as the Adrar of the Ifoghas and the Adrar of Atar [see ADRAR], are clearly of lesser importance and are only remarkable in relation to the surrounding plains. In essence, the greater part of the Sahara is an immense desert, by its very nature divided into two groups. The vast erosion surfaces which have levied the ancient shields of the African plate formation cover the greater part of the Sahara; they are often interrupted by residual relics with steep slopes, called in the Earth Sciences by German terms, inselbergs when they are isolated, and inselberge when they form small mountainous massifs covering a small part of the surface (e.g. the "massif" of the Eglab on the Algerian-Mauritanian border). The other surfaces are made up of sedimentary coverings of the base, forming plateaux and called hamādjas when they are not too worn by erosion. These coverings are sometimes ancient (sandstone tassils around the Hoggar and Tibesti massifs, often much dissected by erosion), and sometimes more recent (the great Mesozoic hamādjas of the Tademait plateaux to the east, and the great sand dunes of the northern region of Tihagh, and the recently-formed hamādjas of the southern piedmont region of the Sahara). The greater part of these surfaces is covered by the ergs (q. v.), occasionally covered by a thin sandy surfacing. In effect, contrary to an idea frequently put forward, the sand dune massifs making up the ergs hardly cover more than one-sixth of the area of the Sahara, even though they may at times make up very extensive ensembles like the Great Western Erg (ca. 80,000
km²) and the Great Eastern Erg in the north of the Algerian Sahara, and the Edeyen (a Berber term) of the Great Eastern Erg in the north of the Algerian Sahara, and the Edeyen (a Berber term) of the Great Western Erg in the south of the Algerian Sahara. Watercourses (waddis) are rare, above all in the hyper-arid central part; their valleys are often very wide and their beds, which are not commensurate with the current quantity of water transported, are favourite spots for human activity; they are the heritage of the more humid climatic variations of the Quaternary period.

4. Human geography and population. The ancient human population of the Sahara is complex, and has its roots in the distant past. One must in fact go back to the beginnings of the Neolithic period (ca. 8,000 B.C.) in order to see how, each time when the climate becomes more wet, the desert becomes repopulated on the its margins—Maghrib, Nile valley, the Sahil. The population was already varied, as is seen in the diversity of the axes of population. All through the Neolithic period, the ancestors of the present-day Berbers and African populations were content with military campaigns of intimidation or mountains, the Sahara henceforth made obligatory retreat of the oasis (where traces of the Neolithic period could now for the first time practise stock rearing and even, at times, agriculture. They also formed political entities, straddling the Sahara and Sahil, which were attracted by the Sahara, in respect of gold and of slaves and made human relations harder.

The 14th century was the golden age for these trans-Saharan relations. The Meccan Pilgrimage of the king of Mali, Mansa Musa [0.0.], in 1324, was the apogee of this, so impressive was its richness. But from the end of the 15th century onwards, the more and more exigent presence of Europeans on the Atlantic coasts of Africa disturbed trans-Saharan relations and made human relations harder. Around the 10th century, a period of climatic remission allowed a number of peoples of the Sahil—Peul or Fulani, Kanuri, Kanemi, etc.—to re-establish themselves as far as the 20° latitude north, where they could now for the first time practise stock rearing and even, at times, agriculture. They also formed political entities, straddling the Sahara and Sahil, which were the first ones in that region and which clashed, towards the north, with those of the Berbers and Arabs.

Arab penetration was in fact an early one, along the tracks, which became the axes for human, commercial, intellectual and religious penetration. From the outset of their conquest of North Africa, they were attracted by the Sahara, in respect of gold and of slaves from its southern fringes. The first moves date from 666 (Fezzan and possibly Kawar), 682 (Sūs) and 734-5 (from Morocco towards Senegal). But during the 7th-9th centuries, the Arabs were still too much strangers to the Sahara for them to establish themselves there for any lengthy duration.

In the western Sahara, there was a strong current of contacts between Morocco and the Sahil, where the town of Awdaghust became important from before the 7th century. At the opening of the 11th one, Berbers of Mauritania—the Almoravids [see AL-MURĀBĪN]—launched themselves in an immense politico-religious movement of conquest, of which the Berber-Sudanese front was as important as the Mooroccan-
Hispanic one. The region then fell once more into an indrawn state, troubled only by the progressive and irresistible movement, as far as the banks of the Senegal, of Arab tribes coming from Morocco, who gradually were to form, together with the Berber substratum, the basis of the Moorish peoples of the western Sahara.

In the Niger bend, Gao was already a powerful, and Muslim, town in the 8th century, frequented by the Massouf Berbers, living between Mauritania and Mali. Its relations with the Maghrib (Tāhār, Ḥadāmīs, Qat, Tunis and Tripoli) and with Egypt, and, above all, with the Hispanic one, were close. The town [q.v.] founded in the 12th century, was another of these staging-post towns of the desert. The kingdom of Mali [q.v.] was a truly international power, which the Ottoman empire, the Ḥafsids of Tunis and the Moroccan dynasties had to take into account. But the region was frequently devastated by the rivalries of the peoples of the Sāhīl (Soninke, Songhai, Mūsštīr, Paull or Fulinī, etc.), the Touaregs (who definitively seized the Air from the Hausas in the 12th century) and, later, the Moroccans, who endeavoured, without great success, to establish their power in the Sāhīl in the 16th century by destroying the Songhāi empire (battle of Tondibī, 1591).

In the eastern Sahara, there were several large groupings, along axes to the Mediterranean, by means of two main routes, Air-Ahaggar and Kāwār-Djado, with Fezzan as a staging-post. The kingdom of Bornu [q.v.] was the most important of these between the 16th and 18th centuries, in contact with the Ottomans, who controlled Cairo, Tripoli and Tunis, and who were above all interested in the slave trade. The Tubus, long established between Fezzan, Djado, Ennedi and Lake Chad, resisted all pressures.

Yet further to the east, relations existed between the Chad basin and the Nile valley in the Sudan, via Ennedi and Dāfūrī [q.v.].

The Europeans did not really appear until the 18th century. Previously, only the coasts were known to them above all, to the Portuguese. The account of the Moroccan Leo Africanus [q.v.], who crossed the Sahara between 1510 and 1514, gave Europe access to knowledge which, alone amongst outsiders, was at that time accessible only to the Arabs. In the 19th century, the Europeans acquired for themselves the means for exploring the interior of Africa, for varying reasons, amongst which were prominent a desire to combat the places of origin for slavery and a search for new economic outlets. All through this century, numerous explorers laid down the roads for colonisation, which was often violent and which excited strong reactions, frequently led by the Muslim Sufi orders of the Maghrib. These last played an essential role in the Islamicisation of the Sahil. One may mention, amongst the main explorers, before they yielded the place to military men, Mungo Park, Laing, Caille, Bornu, Chad basin and the Nile valley in the Sudan, via Ennedi and Dāfūrī [q.v.].

5. The contemporary Sahara.

Insofar as agriculture has not been able to develop
in the desert except under the beneficent effect of ir-
rigation (this marking the great difference between it
and the countries of the Sāhīl, where one can speak of
drying, under conditions of rainfall, as likewise
in the lands bordering the northern edge of the
Sahara), men have systematically colonised the more
low-lying parts. These zones, on one hand, can
benefit, all along the northern edge of the desert, from
the flowing of streams whose waters can be diverted
towards agricultural lands, and, on the other hand,
they allow the underground water level to be reached
more easily by means of wells. From which water is
raised by manpower, animal power or mechanical
pumps. But since the end of the last century, the
resources of the deep water table have been tapped
through deep bore-holes, in this instance, artesian
wells (water under pressure, hence spurting out) and
provide a supplementary advantage. The most abun-
dant resources are those of the so-called Albian water
table (or the Intercalary Continental ones), utilised in
the Algerian and Tunisian Sahara, which is also the
origin of the Great Artificial river of Libya, an enor-
mous aqueduct which transfers water towards the
coastal zones. But inasmuch as the Intercalary Con-
tinental water-table is made up of fossil water (the
results of the last rainfall of the Quaternary period),
the question must be posed, how long can this
hydraulic source last? The question remains
nonetheless pressing because it is these deep bore-
holes which are the basis for the spectacular develop-
mum aqueduct which transfers water towards the
coastal zones. But inasmuch as the Intercalary Con-
tinental water-table is made up of fossil water (the
results of the last rainfall of the Quaternary period),
the question must be posed, how long can this
hydraulic source last? The question remains
nonetheless pressing because it is these deep bore-
holes which are the basis for the spectacular develop-
mant resources of the so-called Albian water
table have their
raison d'être.

Decades of unrestrained urbanisation have in fact
radically modified the general picture, apart from the
effects of the long periods of desiccation which have
affected the fringes of the desert (where the most
numerous groups of nomads live) and which have
erased the complementary factors (climatic, whence
vegetational) making up the support for nomadic life.

While the towns of the Mauritanian Adrar (e.g. Atar)
or yet again he may have become an agriculturist once
account of his relatives who have become sedentarised,
or be he may now become an adjunct of tourism
(guide or porter) or yet again he may have become an agriculturist
once more, often aided by the state, which endeavours
to settle the nomads—unless these principal sources
of income stem from what is regarded as a side-activity,
the nomad himself having kept up a semi-way of life
as a nomadic herdsman, with the family continuing to
live in a tent. In sum, the abandonment of vast
pastoral areas has as its corollary the end of a certain
corn control over the expanses which the nomads enjoyed;
the Saharan expanses have never been so empty, and
the contrast between the towns where men and ac-
tivities are now concentrated and the pasture lands
which have now become useless, has never been so
brutal.

Development policies applied to the Sahara all end
up, whatever the political options chosen by the vari-
ous states, in processes which inevitably converge
on the same constant: a state-directed structure and a
multiplication of relationships which bring about
forms of association in the most varied fields. In prac-
tice, all of these work together to break up the isolation
which was once the common lot of the Saharan peoples:
a good network of roads, access to wage-
earning employment, the developing role of the towns
within the framework of a voluntarist policy and the
generalising of a market economy. In sum, in a few

Because of this, the oasis societies have undergone
deep changes, since the ways of urban consumption
and ways of life have expanded rapidly, as much amongst the sedentaries as amongst the nomads.

Many of the traditional modes inherited from the
past, whose management has been perfectly mastered
by the local populations, will probably continue to
have their raison d'être. But the most spectacular evolu-
tion stems from the development of agriculture for the
market, mainly based on the cultivation of out-of-
season vegetables which the Sahara can produce,
given its latitude and the length of sunshine there; the
agricultural populations which have been best able to
adapt to market demands are from those parts of the
Sahara which are the best supplied with towns, with
mercurial traditions, with the best food supplies and
labour resources, and most easily linked to the great
centres of consumption, i.e. the towns of the Medi-
erranean littoral and the export outlets. Furthermore,
the Saharan expanses, by virtue of their rich hydraulic
reserves, are more and more considered as reserves of
land, immense regions to be colonised, whose value
for intensive agriculture (mainly based on cereals,
above all wheat) may possibly allow of a solution to the
problem of finding food supplies (at least on the
local scale; for the national scale, this is a utopian
dream). Whence the increased number of deep bore-
holes which supply the self-propelled sprinklers and
which create a new landscape, that of agribusiness,
whose real place in the desert will be determined in the
future.

In this context, nomadism is only a residual, very
much a minor, activity, despite the tenacious legend
which sees the Sahara as essentially a land of nomads.

much a minor, activity, despite the tenacious legend
which sees the Sahara as essentially a land of nomads.

Decades of unrestrained urbanisation have in fact
radically modified the general picture, apart from the
effects of the long periods of desiccation which have
affected the fringes of the desert (where the most
numerous groups of nomads live) and which have
erased the complementary factors (climatic, whence
vegetational) making up the support for nomadic life.

A new complementarity, this time based on relation-
ships with the town, has replaced these latter ones; the
nomad may now raise livestock for slaughter on the
account of his relatives who have become sedentarised,
or be he may now become an adjunct of tourism
(guide or porter) or yet again he may have become an agriculturist
once more, often aided by the state, which endeavours
to settle the nomads—unless these principal sources
of income stem from what is regarded as a side-activity,
the nomad himself having kept up a semi-way of life
as a nomadic herdsman, with the family continuing to
live in a tent. In sum, the abandonment of vast
pastoral areas has as its corollary the end of a certain
control over the expanses which the nomads enjoyed;
the Saharan expanses have never been so empty, and
the contrast between the towns where men and ac-
tivities are now concentrated and the pasture lands
which have now become useless, has never been so
brutal.

Development policies applied to the Sahara all end
up, whatever the political options chosen by the vari-
ous states, in processes which inevitably converge
on the same constant: a state-directed structure and a
multiplication of relationships which bring about
forms of association in the most varied fields. In prac-
tice, all of these work together to break up the isolation
which was once the common lot of the Saharan peoples:
a good network of roads, access to wage-
earning employment, the developing role of the towns
within the framework of a voluntarist policy and the
generalising of a market economy. In sum, in a few
decades only we have witnessed a process of integration in the sense used in politics, i.e. entry into a vast grouping which is transforming the life of the Saharan peoples by bringing them fully into the process of state-building.

That the Sahara is going to be, in the future, an expanse which not only retains its population but attracts people as well, is the tangible proof that it has become part of the development process. The attachment of these immense Saharan expanses to the Mediterranean province of each of the states involved constitutes a geopolitical factor of first-rank importance.

(S. Bisson)

SAHSARAM, variously spelt as Sahasaram, Sasaram, Sarsaram, Sasiram, a small town in the Sahabād district of Bihar in India (lat. 24° 58’ N., long. 84° 01’ E.), associated with the name of Shir Shah’s tomb is an “architectural masterpiece”. It stands in a vast artificial lake with an octagonal hall surrounded by a wide arcade which forms a gallery. Its imposing structure rises in five stages to a total height of about 45.5 m. Spreading out to the water’s edge is a continuous plinth of steps. The tomb chamber has inscriptions carved on the kibla wall. The roof is supported by four Gothic arches. Brown, op. cit., 85, considers the tomb structure “an inspired achievement, a creation of sober and massive splendour of which any country would be proud.”

Other buildings of Sahsaram worthy of mention are the Ka’fa, the ‘Idgah and the hammam or Baths.

(K.A. Nizami)

AL-SAHUL, the name of both a town and a wādī in Yemen. The town lies on the road from Ibb to Al-Mahhadīr near the ruins of Zafār Al-Sahrāf, in ancient times the capital of the Ḥimyarite kingdom (see Smith, Assiyabid, ii, 216). For Wādī Sahsul, see Edward Guaser’s Reise nach Mārib, ed. D.H. Müller and N. Rhodokanakis, Vienna 1990, 1978, charts 2-3. Al-Sahul was called Miṣr al-Yaman on account of its wealth in corn, and was celebrated for the so-called Sahulī croaks (sahuliyya) made there of white cotton. The Prophet is said to have been shrouded (kufna) in two of them for burial. Al-Sahul is mentioned in connection with the journey made by Asad al-Dīn Muhammad b. Badr al-Dīn Hasan from Qūwāwā via Wusāb to Dhīmar (q.v.). (see al-Khadrājī, i, 111; on Asad al-Dīn see al-Madīn L-Dīn Allāh Ḥamād, i, 98; Masʿūdī, Tānkh, 281; Khadrājī, al-ʿUkād al-luwiyya, ed. and tr. Redhouse, 61, 353; G.R. (E. van Donzel)
The precise date of his birth is not known, but it is presumed that he was born around 1010/1601-2. His father, Mrzâ Abd al-Rahîm, was a leading merchant of Tabriz. When Shâh ʿAbbâs I (r. 983-1038/1587-1629) made Isfahan his capital he caused many merchants from Tabriz to settle there, in the quarter named ʿAbbâsîâbâd. At this time Şâib s father moved to Isfahan, where the poet is said to have been born. In his verses, however, Şâib often invokes his connection with Tabriz, and consequently he is referred to both as a Tabrizi and an Isfahani.

Şâib s early upbringing took place in Isfahan. He obtained his education at home, and became involved in poetic exercises at a young age. He is reported to have received his training in poetry from Rûknâ Masîb of Kâshân (d. 1066/1555 or 1070/1659-60) and from Shâraf al-Dîn Shfa (d. 1037/1628), although this is discounted by some recent authorities. During his youth he made a pilgrimage to Mecca and also visited the shrine of ʿAli al-Ridâ in Maghâd.
to the physical features of the beloved; another, called Mir'at al-khaydil (“The mirror of the beloved”); another, called Mihr, (“Worthy of keeping”). He also compiled an anthology, entitled Bayād, which contained a selection of his own verses as well as those of other poets, both old and new.

Sa'ib was well-versed in the art of calligraphy, a family legacy which may be traced to his uncle, Shams al-Dīn ibn al-Khathir (1210/1893-1991), titled Shīrīn-kalhī ("Of sweet pen"), who was a master calligrapher of his time. There exist several manuscripts of Sa'ib’s works in his own handwriting, indicating the poet’s skill in the nasta’īlī form of calligraphy.

Among the verse forms employed by Sa'ib, the predominant one was the ghazal. His collection contains some kashidas and muhānawīs, but these constitute an insignificant part of his huge output. It is the quantity and quality of his sahībīs, but these constitute a significant part of his huge output. It is the quantity and quality of his sahībīs, which are the most important aspect of his poetic tradition. He is portrayed in one account as having performed in traditional fashion, singing improvised couplets from his poems and other verses in a volume, which he called Wazīb al-hīds ("Worthy of keeping").

Sa'ib was a leading exponent of the Indian style of Persian poetry (sahib-i Hindi [q.v.]). He remained a prominent poet, retaining its spontaneity because of his skillful handling. His collection contains a selection of his own verses as well as those of other poets, both old and new.

Sa'ib was a leading exponent of the Indian style of Persian poetry (sahib-i Hindi [q.v.]). He remained a prominent poet, retaining its spontaneity because of his skillful handling.
Sa'id Khathir was in especially high favour with 'Uthman, and was appointed by that caliph, together with the other Kuraish 'Abd Allah b. al-Zubayr. 'Abd al-Rahman b. al-Harirah and the Medinan Zayd b. Thabit [q. v.], to prepare a Kur'ân vulgate text on the basis of the mushaf [q. v.], of Hafsa, probably in 32-36/652-6 (see Nöldeke-Schwally, G des q., 48, 50-2, 56). He married two of 'Uthman's daughters, Maryam and Umm 'Amr, and also had links with the Marwānid branch of the clan through his marriage to Umm al-Banîn, daughter of Marwān b. al-Hasam [q. v.].

In 29/649-50 he was appointed governor of Kufa in succession to al-Walid b. 'Ukba, achieving a reputation as a military commander by leading expeditions into Adharbaydjan and the Caspian provinces. But he incurred unpopularity in unruly Kufa—to him is attributed the saying that the Sawâd [q. v.] of 'Irâq was the garden of Kuraysh, i.e. meant to be exploited by the Meccans—and his return to his post from Medina at the end of 34/655 was blocked by the kûrâni and other agitators in Kufa under Yazid b. Kays al-ARTHAB and Mâlik al-AGhtar, who proclaimed Abû Mûsâ al-ASH'ari [q. v.] governor in the city. Sa'id fought in defence of 'Uthman's dâr in Medina when it was attacked by the rebels of the Egyptian army and was wounded protecting the caliph; but, after at first inclining to the cause of 'A'shâ, and thereafter that of 'Abbâs, he declined to participate in the Battle of the Camel, and settled in Mecca. He did not participate in the events of Sîfin [q. v.] either, but Mu'awîya in 49/669 appointed him governor of Medina in place of Marwân b. al-Hasam, and he remained in office till replaced by the latter in 54/674.

He finally returned to his estates in the Wâdi 'I-ASH'IK at Medina, and died at al-ARSA, most probably in 59/678-9. The leadership of his family then devolved on his son (as many as 14 sons of his are enumerated in the nasab literature, e.g. in al-Baladhuri, Ansâb, ibv, 136-49) by Marwân's daughter, 'Amr al-ASH'IK [q. v.].

Although an Umayyad, Sa'id had close relations with members of the Hashimi family, and it was recalled by them that he had taken no part against 'All in the First Civil War (see Lammens, Mo'awia I, [q. v.]; and see also Ansbacher, Al-Ash'arî, v, 190, 207, 267, 283-4; Tabari, i, index; Ibn al-Asâr, Usd, ii, 309 f.; ibid. Kamal, ii and iv, index; Ibn Hadjar, Ishâb, no. 5059; Nawawî, Tahâdi'l asmâ', ed. Wüstenfeld, 281-2.

Sa'id b. Abû aRûBA, Mihrân Abu 'l-Nadr al-As b. Umayya, a member of the A'Sâs [q. v. in Suppl.] component group of the Umayyad clan in Mecca and, later, governor of Kufa and Medina, died in 59/678-9, according to the majority of authorities.

His father had fallen, a pagan, fighting the Muslims at the battle of Badr [q. v. on 2/624 when Sa'id, his only son, can only have been an infant. He nevertheless speedily achieved great prestige in Islam not only as the leader of an aristocratic family group but also for his liberality, eloquence and learning. He...
Sa'id b. al-Bitrik is the author of a medical treatise, *Kitab ad-daw' al-kabir* (mentioned by Ibn Abi Usaybi'a), of which a manuscript has been preserved in the Manṣūrī library at Aleppo (cf. P. Sbath, *Al-Fihrist*, i, 3, no. 25).

(b) History

Sa'id b. al-Bitrik is best known for his universal history dedicated to his fellow-physician Ḥāfaẓ b. al-Bitrik, *al-Ta'khīk al-majmū'a* (mentioned by Ibn Abl al-Usaybi). His patriarchate was approved by the copyists Naẓm al-Ḍishwar, who gave it the title of *Annals*, although this is not strictly speaking a case of annals but of a universal history in which the material is divided chronologically according to the reigns of sovereigns. With this first Christian history in the Arabic language, dealing simultaneously with religious and secular events, Sa'id intended to offer to the Melkite community a history that would enable it to assert its identity vis-à-vis the other Christian communities, and vis-à-vis the Byzantine and Arab empires.

It begins with the creation of Adam and deals with Biblical history until the Babylonian exile, then expands into a history of the Near East until the birth of Christ, devotes substantial treatment to the beginnings of the Church, to heresies and to councils, to the reigns of sovereigns, of Byzantine emperors, and finally, from the reign of the emperor Constantine the Great to the birth of Christ, devotes substantial treatment to the beginnings of the Church, to heresies and to councils, to the reigns of sovereigns, of Byzantine emperors, and finally, from the reign of the emperor Constantine the Great to the birth of Christ.

It was known in the West from the 17th century onwards. In 1642, John Selden edited, translated and commented on a brief extract concerning the preaching of St. Mark and the origins of the Church of Alexandria; in 1661, A. Ecchelesius refuted Selden by producing a new translation of the same passage; in 1658-9, E. Pococke published the complete text of the *Ta'khīk* on the basis of the manuscripts obtained by Selden (all three copied in Aleppo in the 17th century), accompanied by a Latin translation and index. This translation was reproduced, as were those of Selden and of Ecchelesiu, in the *Patrologia* of Migne. In 1906-9, L. Cheikh, alone for the first part, in collaboration with H. Zayyāt and B. Carra de Vaux for the second, re-edited the Arabic text on the basis of the manuscript of the Zayyāt collection while giving the variants according to the Pococke edition, to which B. Carra de Vaux added a collaboration with two manuscripts of the Bibliothèque Nationale de Paris; this edition also contains the continuation owed to Yāḥyā al-Anṭāḵī. In 1987, B. Pirone produced an annotated translation into Italian, according to Cheikh's text.

The manuscripts, even though they differ on the date of the end of the chronicle and contain more or less significant variants, represent the same recension of the text. Nevertheless, one manuscript stands out from the others: the ms. Sin. Arab. 580 (582) of Saint Catherine's Monastery in the Sinai, considered an anonymous chronicle (the manuscript is mutilated at the beginning and at the end) until Breydy claimed to have identified it as the original, and even autographic, recension of the *Ta'khīk* of Sa'id b. al-Bitrik, henceforward regarding all the other manuscripts as bearers of a version adapted and amplified in Antiochian circles in the 11th century, perhaps by Yāḥyā himself. Breydy bases his conclusion on three arguments: (1) The script of Sin. Arab. 580 (582) makes it possible to date this manuscript at the beginning of the 10th century (a cursive Kūfic, sometimes poorly deciphered by the authors of the later recen-
tion, examples in *Mamila ou Maqella?*, 73-4, and in *Etudes*, 33-4); (2) The statement by Yahya himself (PO, xviii/5, 708-9) that after his arrival in Antioch he had revised a number of topics which then became available to him, and that he had intended to correct in the same manner the *Taʾrikh* of Saʿid which he considered flawed and incomplete. Although he adds that he abandoned this project, Breydy thinks that he, or others, did not resist the temptation; (3) The fact that all the manuscripts of the *Annales* belong to the Antiochene Melkite circle, and the late date of a number of topics (the last do not appear back beyond the 13th-14th centuries). Comparison between the so-called Alexandrian recension of Sin. Arab. 580 (582) and the so-called Antiochene recension of the Pococoe and Cheikho editions, outlined in *Etudes*, ch. v., has not been made in detail by Breydy except with regard to the taking of Jerusalem by the Persians and its reconquest by Heraclius (in *Mamila ou Maqella?*); it permits him to establish the Arabo-Jacobite origin of the first version, while the additions and glosses of the second would seemingly derive from Byzantine sources found at Antioch. Only a critical edition taking account of the entire of the manuscript tradition, comparison between the two versions, and precise study of the origin of the additions, could definitely confirm, or refute, the conclusions of Breydy.

The vehement opposition displayed by Saʿid b. al-Biṭrīk towards other Christian persuasions led to ripostes, among others, from the Copit Sāwirūs (Severus) Ibn al-Mukaffāʿ [q. v.] in *Kitāb al-Maḍāmmin* (P. Chebeli, *Réfutation de Saʿid ibn Batriq* (Eutychius). *Le livret des conciles*, in PO, iii [1905], 121-242) and from the Nestorian Elia of Nisibis (L. Horst, *Das Metropolitien-Elias von Nisibis Buch vom Besetz der Wahrheit der Gläubigen*, Collmar 1886, 25-56 ff.). The few lines in which Saʿid denies the perpetual or-temptation; (3) The fact that all the manuscripts of the *Annales* are inserted at a later stage, and precise study of the origin of any of these passages, on account of its similarity to another of apologetics, the *K. al-Burhān* (ed. R.B.C. Huygens, 100; cf. H. Mohring, *Histoire de la conception de l’Euphrasien*, ed. De Goeje, i, 176, and by Ibn Abī Usaybiʿa). Nasrallah (ed. cit., 31) has advanced the hypothesis that the three long refutations of the Nestorians and the Jacobites (ed. Cheikho, i, 159-61, 161-75, 196-7), which interrupt the narration and are introduced by the expression *kāla Saʿid b. al-Biṭrīk al-mutatabbih*, were inserted at a later stage, and that the first and the third of these passages are borrowings from the *K. al-Dīd al-Dīd*; as for the second of these passages, on account of its similarity to another work of apologetics, the *K. al-Burhān*, it poses a new problem, that of the attribution of this work to Saʿid. On the basis of the presence of the same passage in both *Annalenwerk des Eutychios von Alexandrien* and the *Ein bisher unbekannten Werk* of Graf (Ein bisher unbekanntes Werk, and GCAL, ii, 37) considered that Saʿid was the author of the *K. al-Burhān*. While it is certain that this treatise was composed in Arabic by a Chalcedonian before 944 (since it situates in Edessa the mandilium which was transferred to Constantinople in that year, which is confirmed by a note to Sin. Arab. 75, composed in 982, declaring that its author inherited this manuscript from his grandfather, cf. Nasrallah, op. cit., 32-3), the attribution to Saʿid is today not considered valid (criticism of Graf’s hypothesis, notably from F. Tautul, in *al-Maṭrīk*, xxvi [1929], 914-19, and Nasrallah, op. cit., 31 ff.).

(c) *Apologetics.* Saʿid b. al-Biṭrīk undertook the defence of the Chalcedonian faith not only in his *Taʾrikh* but also in a work of apologetics which has not been preserved: *K. al-Dīd al-Dīd baʿn al-mukḥāliṭ wa ʿl-nasrānī* (mentioned by Saʿid himself, Annales, ed. Cheikho, i, 176, and by Ibn Abī Usaybiʿa). Nasrallah (op. cit., 31) has advanced the hypothesis that the three long refutations of the Nestorians and the Jacobites (ed. Cheikho, i, 159-61, 161-75, 196-7), which interrupt the narration and are introduced by the expression *kāla Saʿid b. al-Biṭrīk al-mutatabbih*, were inserted at a later stage, and that the first and the third of these passages are borrowings from the *K. al-Dīd al-Dīd*; as for the second of these passages, on account of its similarity to another work of apologetics, the *K. al-Burhān*, it poses a new problem, that of the attribution of this work to Saʿid. On the basis of the presence of the same passage in both *Annalenwerk des Eutychios von Alexandrien* and the *Ein bisher unbekanntes Werk* of Graf (Ein bisher unbekanntes Werk, and GCAL, ii, 37) considered that Saʿid was the author of the *K. al-

SA’ID B. HUMAYD b. SA’ID AL-KÂTIB, Abū’l-Uṯmān, Abābīsīd scribe, epigrapher and poet. His exact dates are unknown, but he was probably born in the last years of the 3rd century A.H. and died after 257/871 (or 260/874), the year of Fadl al-Ṣāḥib’s death (q. v. in Suppl.). His family came from the lower Persian nobility—he himself is sometimes called al-dhibân—and he claimed royal Persian descent. He seems to have held various lower provincial offices, before stepping into the limelight as the kâbit of Ahmad b. al-Khâṣib, vizier to al-Muntasir (r. 247-8/861-2) (q. v.), for whom he drew up the bay’a declaration (preserved by al-Tabarî, Ta’rikh, ii, 235, tr. J. Kraemer, The History of al-Tabarî, v, vii, 1989). The last al-Muṣṭaq’s successor, al-Muṣṭa’in (r. 248-52/862-6) (q. v.), headed the diwan al-ṣarâ‘ al-Ṣāhib (al-Tabari, ii, 264, tr. G. Saliba, 133). He was, however, less of a career administrator, comparing, as he did, the government service with a bath-house: if you are inside, you want to get out, and if you are outside, you want to get in (Ibn Abî ‘Awân, al-Tâbâkât, ed. Mub. Abû al-Muṣîd al-Khâna, Cambridge 1950, 316); his favourite ambiens was the literary salons of his time, especially that of the famous poetess, songstress, and lute-player, Faḍl al-Ṣāḥib. With her he had a stormy love relationship, which occasioned a fair amount of poetry on both sides. But his love poetry and, if we can trust the anecdotes, his love life, was by no means restricted to females.

Ibn al-Nadîm lists a collection of his poetry (Fihrist 123r, 166v-167r [50 folios]) and a collection of his letters (ibid. 125v). Neither has been preserved, but the specimens and fragments transmitted in secondary sources have been collected by al-Ṣāmarrâ‘î (see Bibl.). He lists 43 pieces of prose, many of which are short sayings, while only two are lengthy documents. One is the bay’a for al-Munṭasir (see above), the other presents a description of a battle during the civil war between al-Muṣṭaq and al-Muṭṭazz (q. v.), written on 24 Safar 251/25 March 865 (reading ṣafīna for ṣhāṭa‘a in the text) at the behest of the governor of Bagdad, Muhammad b. Abâdalâh b. Tâhir, to be read in the Friday mosque (al-Tabari, Ta’rikh, ix, 296-303, tr. Saliba, 50-8, al-Ṣâ‘lim, 105-17). The collected poems and fragments of such run into 73 (plus 17 doubtful) items; the longest has thirteen lines. Ibn Abî Tâhir Tâyûr (d. 280/893 [q. v.]) presents Sa’d b. Humayd as a very able plagiariser (Fihrist, 123-24), remarking that, if one were to say to his prose and poetry “Return to your originators”, nothing would stay with him. This is, however, not an original critique, either. According to the anecdotes, he was a facile improver, and his poetry cannot be expected to be highly innovative. Most of the preserved pieces are in the ḥaṭal genre; they are smooth and elegant.

His shu‘âbi attitude (see shu‘a‘ibiyâ) emerges from the title of another book, now lost, that reads K. Iniṣṣif al-‘ajam min al-‘arab. “Demanding justice for the Persians from the Arabs”, also known as al-Ṭasâwir “The equalising” (Fihrist, 123v-24). The choice of words here shows him to be a moderate who did not claim superiority for the Persians.

Sa’d b. Humayd had a number of namesakes—al-Ṣâmarrâ‘î enumerates five of them (q. cit., 32-4)—of which Abû’l-Uṯmān Sa’d b. Humayd b. al-Bakhtâkân (Fihrist, 123v-26) was easily confused with our man due to the similarity in name as well as in shu‘âbi conviction.

Arabia, and occasionally to Europe and to China. The range of his interests is exemplified in 1845, when he sent an Arab horse as a present to the American President, and himself received an imperial dinner in which sixty-four pieces from the Chinese Emperor, of a kind of porcelain reserved for the Imperial Family alone.

From 1822 he was under pressure to end the slave trade, when he was forced to forbid the sale of slaves to Christian powers. In 1845 he was persuaded into a further treaty prohibiting both import and export of slaves from his African dominions. Since he had no control inland it was not difficult to evade these provisions.

The prosperity of Zanzibar, and in particular the wealth that accrued from the clove trade, in which his father's patriarchal administration. He was dependent on Sa'id's control inland it was not difficult to evade these provisions. Sa'id had no children by his legal wives, but of his many sons were born and an unknown number of females. Strict in his observance of the daily prayers, he delighted in lavish generosity at the great festivities; his personal life was of the simplest. He was an accomplished horseman and practical seaman. Sa'id, wrote a British consul, was "most truly every man's friend; he wishes to do good to all."
28 October 1899 into a modest family of rural origin. His first studies were at the local Qur’ānic school of the town, where he speedily revealed himself to his teachers as one possessing a lively intelligence and, in particular, a precocious poetic talent. He composed his first verses at the age of eleven, and an anecdotc is retailed about this, generally reported and related by those who had known him: he dealt with his subject of school composition in verse, at the same time preventing his masters from making the slightest correction. For financial reasons, he was unable to proceed to secondary studies and it was from a lawyer and literary man from the Sāhib region, one Rādjih Ibrāhīm, who practiced at Sousse, that he found encouragement, both moral and material. This last made Saʿīd his secretary and placed his personal library at his disposal. Saʿīd profited from this to complete his education, as a genuine autodidact. Soon afterwards, he made contact with certain organs of the press in the capital Tunis, becoming a correspondent for them. Having mastered Arabic and French, and even Hebrew, with the encouragement of his patron Rādjih Ibrāhīm, he went to Tunis and established himself there permanently, working as an editor for various newspapers and journals, such as al-Faḍr, al-Badr, al-‘Arab, Liṣān al-Shaʾb, al-Nādim, al-Wazīr and al-Saʿūdī, in the last of which he published his first poem, on 21 May 1920. This made him famous on a contemporary man of letters who was, like Saʿīd Abū Bakr, a strong defender of the rights of women. His translation of the commentary of Pappus on book X (on commensurable and incommensurable magnitudes) has preserved the fashion of an Ibn Batūta, with the title al-Andalus ka-annaka tarābah (1931).

On 29 January 1948 he died, and was buried at Tunis. After the achievement of independence, his remains were moved to the Mausoleum of Martyrs in his native town of Moknine, and this last has, for several years, and in homage to the person and his work, organised regularly a cultural and artistic festival in his memory. His name has been given to one of the main streets of the capital as well as in towns of the interior.

Bibliography

SAʿĪD B. YĀʾKŪB AL-DIMĀSHḴĪ, Abū Ṭūṭmān, physician and translator of Greek scientific works into Arabic. As one of the leading physicians of his time, he enjoyed the favours of the vizier ʿAbī b. ʿIsā (d. 334/946 [q. v.]). When the latter endowed a hospital in the Harbiyya quarter of Baghdaḏ in 302/914-15, he appointed Abū Ṭūṭmān as chief physician with the joint responsibility of supervising the hospitals of Baghdaḏ, Mecca and Medina (Ibn Abī Usaybiʿa, i, 234, ll. 8-10, according to Thābit b. Sinān; cf. Ibn al-Djawzi, al-Muntazam, vi, 128; on the vizier’s measures for public health, see ibid., 221-2, and al-Kifisti, Hukama, 193-4).

As a translator, he served not only the demands of the medical profession but showed equal competence in mathematics and philosophy. Together with Ishaḵ b. Ḫunayn and Thābit b. Kurra [q. v.], the most eminent transmitters of Hellenistic science in his generation, he was close to the Shiʿī mutakallim and heresiographer al-Ḥasan b. Muṣā al-Nawbakhti [q. v.; and see Ibn al-Nādim, al-Fihrist, 177].

Of his medical works, versions of Galen’s De pulsibus ad iuron (with a commentary ascribed to Johannes Philoponus) and De neronorum dissectione, and of De urinis by Magnus of Emesa, are extant in manuscript; his own tabular compendium of De pulsibus is lost (see Sezgin, GAS, iii, 82, 90, 159; M. Ullmann, Die Medizin im Islam, Leiden 1970, 81, 90). His translation of the commentary of Pappus on Euclid’s Elements, book X (on commensurable and incommensurable magnitudes [irrationalities]) has preserved a valuable document lost in the original Greek, of the late Alexandrian tradition of mathematics (see Sezgin, GAS, v, 175; ed. W. Thomson, with G. Junge, The commentary of Pappus on book X of Euclid’s Elements, Cambridge, Mass. 1930; German tr. H. Suter, Beiträge zur Geschichte der Mathematik bei den Griechen und Arabern, Erlangen 1922, 9-78).

His lasting importance as a translator lies in his philosophical work, where his scope went far beyond the ethical Platonism and Galenism of the medical
tradition, as attested in his own masd^il on Galen's De moribus (lost, see Ibn Abl Usaybi'a, i, 234) and a chapter of sayings of the Siwdn al-hikma (lost, see Ibn Abl Usaybi'a, i, 234). His translation of Aristotle’s Topica, books I-VII, became the definitive version of this fundamental textbook of logical reasoning. His translation of Aristotle’s De topica, mufredda, but a particular claim of his to fame was his association with Ibrahim Müteferrika (q.v.), the pioneer printer of Islamic Turkish books in Turkey, being with Ibrahim the joint grantee of the original firman issued by Ahmed III for the establishment of a printing press in 1139/1727 (see MATHA'A, 2. In Turkey).

SA‘ID PASHA, MUHAMMAD, youngest son of Muhammad ‘Ali Pasha (q.v.) and hereditary viceroy of Egypt, theoretically under Ottoman suzerainty, 1854-63. He was styled Pasha, but was already known in informal and unofficial usage as Khedive before this latter title was formally adopted after his death (see KHXDEV).

Born in 1822, his father had had a high opinion of his capabilities and had sent him at the age of only nineteen to Istanbul for negotiations over the tribute payable by Egypt to the Porte. Sa‘id’s uncle and predecessor in the governorship of Egypt, Abbâs Hilmi I b. Ahmad Tüsün (q.v.), had endeavoured to change the succession arrangements in the Ottoman firman of 1841, providing that the succession should go to the eldest living descendant of Muhammad ‘Ali’s line, in favour of his own progeny, hoping that his son İlimi Pasha would succeed him. Abbâs’s death was briefly concealed, but Sa‘id nevertheless managed to succeed without difficulty in July 1854.

Abbâs Hilmi had been both zealous in guarding his rights vis-à-vis the Ottoman sultan and also suspicious of European pressures on Egypt and of foreigners in general. Sa‘id was mistrustful of the West and its new techniques, having had several European tutors, and had an especial fondness for French culture; he appeared as a mild and benevolent ruler, more popular than his secretive, traditionalist predecessor. But he was also somewhat weak and susceptible to advice from interested parties, so that he succumbed to the charm of Ferdinand de Lesseps and granted to him the famous Suez Canal concession (see below).

Possibly influenced by outside advisers, Sa‘id revived many of his father’s economic, social and legal policies, whilst relaxing the extreme centralisation of Muhammad ‘Ali’s time. He promulgated the first comprehensive law in Egypt on private landed and immoveable property, granting the right freely to foreigners in general. Sa‘id was interested in railways and other forms of communication. The railway between Cairo and Alexandria was finished and a concession granted to the Eastern Telegraph Co. In 1854 the first River Navigation and Transport Co. in Egypt was founded, and in 1857 a commercial

1174/1761. He was the son of the statesman and diplomat Mehmed Yirmisekiz Celebi Efendi (q.v.), and accompanied his father on his diplomatic mission to France in 1152/1740-1. After a career as a secretary in the Divan-i Humâyûn, he himself was sent on embassies to Sweden and to France (1154-5/1741-2), and in 1169/1756 became Grand Vizier to Qâhîm Mân (q.v.) for five-and-a-half months. He finished his career as governor of Egypt and then of Adana and Mar‘âsh, dying in the latter place.

He was the author of inter alia a collection of poetry and a dictionary. The Elements of theology (Isagoge) finished before 298/910-11, the date of a copy taken from Abû Uthmân’s exemplar (see ibid., i, 532). Even more widely read was his rendering of Porphyry’s Introduction (Isagoge) to Aristotle’s Categories (ed. Badawi, Mantiq Aristi, ‘1019-1105). A partial translation of Aristotle’s Physics, comprising at least books IV (with the commentary of Alexander of Aphrodisias), was finished before 299/910-11, the date of a copy taken from Abû Uthmân’s exemplar (see ibid., i, 532). Even more widely read was his rendering of Porphyry’s Introduction to Aristotle’s Categories (ed. Badawi, Mantiq Aristi, ‘1019-1105). A partial translation of Aristotle’s Physics, comprising at least books IV (with the commentary of Alexander of Aphrodisias), was finished before 299/910-11, the date of a copy taken from Abû Uthmân’s exemplar (see ibid., i, 532). Even more widely read was his rendering of Porphyry’s Introduction to Aristotle’s Categories (ed. Badawi, Mantiq Aristi, ‘1019-1105).
Navigation Co. to help foreign trade. Above all, in 1854 de Lesseps received his first Suez Canal concession, confirmed by the Paşa in 1856. The European powers, including both France at the outset and Britain, tried by diplomacy to hinder the project, but work was begun in 1859 by peasant corvee labour and continued for a decade; the seaport at the northern end of the Canal was named Port Sa‘id [q. v.] after the Paşa (see D. S. Landes, Bankers and Pashas. International finance and economic imperialism in Egypt, London 1958, 69 ff.; J. A. Farnie, East and West of Suez. The Suez Canal in history 1854-1956, Oxford 1969, 32 ff.).

In the financial sphere, the Bank of Egypt was founded in 1854 and the process began during Sa‘id’s reign whereby European financial and commercial influence became pervasive. The Paşa’s financial needs for his military ventures (see below) and his public works led him to seek a £3 million loan from a London banking house, a harbinger of the disastrous financial policies which were to plague his successors. Ibn al-ʿArabi’s well-known followers were drawn much closer to the philosophical teachings of Ibn al-Farid’s poem, but their main significance lies in the importance as two of the earliest commentaries on Ibn al-Farid’s own works on煤气灯气 al-Maṣāḥif wa-suluk; the first is Sa‘id al-Din and called its introduction an unparalleled exposition of “the science of reality” (Nafahdt, 559).

Farghani’s third work, the Persian Manāhiḥ al-ʿibād ‘l-maṣāḥif wa-suluk, outlines the five pillars of Islam along with the legal works pertaining to the school of Muntahah ‘l-madārīd. From 1957, 542).

It was not as widely read as the other two, but it gained more readership than it might have because Kutb al-Din Shirazi (d. 710/1311) studied it, and called its introduction an unparallelled exposition of “the science of reality” (Nafahdt, 559). Farghani’s best known for his Persian and Arabic commentaries on Naṣr al-suluk. The full name of the first is Sa‘id al-Din Farghani, often called Sa‘id ‘l-madārīd, author of important ūṣūl works pertaining to the subject of Ibn al-ʿArabi. Sometimes the form Sa‘id al-Din is found, but this seems to be a copyist’s correction of Sa‘id ‘l-madārīd, confirmed by the Paşa in 1856. The European bankers and Pashas, internationa...
mode of expressing Islamic teachings than was the Shaykh al-Akbar himself. Farghani's introduction to Munirad 'ilm-madarik is an especially good example of a dense philosophical and relatively systematic exposition of Ibn al-'Arabi's teachings. It provides a better survey of the technical terms and discussions that were to play major roles in theoretical Sufism in the coming centuries than does Ibn al-'Arabi's own Fısü al-shikam, which was to be the object of over one hundred commentaries.

SA'ID AL-SU'ADA', the name of a khankah or establishment for Sufis at Cairo founded during the Ayyubid period in a former Fatimid house within al-Kahira, now in the modern Djamaliyya street (INDEX DES MONUMENTS HISTORIQUES, no. 480).

In Fatimid times it was a dwelling facing the Dīr al-wizāra, at that period the ministry of justice. Some famous persons dwelt there, such as the vizier ʿAlāʾ al-Dīn b. Ruzzik [q. v.], who had a tunnel dug to connect it with the Dīr al-wizāra. It was at this point that it acquired its name of Sa'id al-Su'ada' "the Supreme-happy one", from the name of the person thus styled, the ustādī Kanbar (or 'Anbar), an instructor at the great palace under al-Mustansir (al-Makrizī, Khitat, ii, 415).

Khanqah Sa'id al-Su'ada': plan as it was in 1987 (CEA, Versailles).

With the change of dynasties, the Fatimid palaces were destroyed, but this one was spared. At an early date, Sulāh al-Dīn installed there the Kurdish amīrs of his government and then, in his capacity as the owner of the palace, the Sufis themselves received a daily allowance of bread, meat and provisions from the revenues of the wa'īf institut ed in 569/1173-4. These properties comprised a garden in the district of Birkat al-Fīl and Kaysariyyat al-Sarrāb in Cairo, and part of Dahmur in al-Bahnasniyya. Saladin also built nearby a hamamīr for the Sufis (still functioning in the 19th century and called the "Hamamīr al-Djamaliyya", used by men and women, see 'Ali Pasha Mubārak, Khiṭat, ii, 218).

This was the first khankah in Egypt, and its head was appointed shaykh al-shuyukh—this until this post reverted to the shaykh of the khankah of Sīrāyūs in 724/1324—so that it was thus at the head of "official" Sufism. From this time onwards, this place acquired the name of Duwayrat al-Su'ada', little house of the Sufis. It also sheltered Muslim travellers requiring shelter, religious hospitality being one of the basic duties in the Muslim world at this period. Since it was a khankah, the khanka was not given there, and on Fridays the Sufis went to pray in the mosque of al-Hākim; later, when the mosque of al-Askar had been restored, they went there for their worship. The Sufis of this khankah were so famed that the people, in order to acquire their baraka, came each Friday from al-Fustāt and al-Kahira to join with them in their procession to the mosque of al-Hākim. Al-Maqrizi (Khiṭat, ii, 416) says that 300 Sufis were accommodated there. In addition to their daily bread and meat, they received confectionery, soap and a wardrobe (eight sets of clothing a year); in 708/1309 their emoluments were increased (idem, Suluk, ii, 50). This prosperity lasted until the crises of 806/1403-4, when the kitchens had to be closed (idem, Khiṭat, ii, 416). From the second half of the 9th/15th century onwards, the khankahs, closely linked to the secular power, lost some of their prestige, and, with the decline of their waqfs, some of their revenues. Sa'id al-Su'ada' did not escape this process.

From the architectural viewpoint, this monument, rebuilt in the Mamluk period (Fernandez, 22), displays a plan with a central court surrounded by four iwāns, the eastern one being the prayer room, and there are cells for the residents. A minaret was built at a late date, in the 780s/1380s, by the shykh Shihāb al-Dīn Ahmad al-Anṣāri (al-Maqrizi, Khiṭat, ii, 416). This monument was classified by the Committee for the Preservation of Islamic Monuments in 1931.

AL-SA'ID (or SA'ID) AL-MAŞR, the term which in Arabic denotes Upper Egypt, this being, in the strict sense of the term, the serviceable section of the Valley of the Nile (from 5 to 10 km in breadth by some 900 km in...
length), situated between Cairo and Aswan [q. v.]; to this should be added the Fayyum [q.v.], considered one of the provinces of Upper Egypt, and the nearby oases in the western desert (al-Wāḥāt: Bahriyya, Farāfrah, Dākhla, Khārdja [q.v.]), over which the authorities of the Valley have been obliged to exercise supervision; finally, to the east, the security of the tracks crossing the mountainous region between the Nile and the Red Sea has also been the responsibility of these authorities. The history of the Sā'īd cannot be understood without consideration of these routes and of the populations which made use of them at different times; measures taken to control them were often the basis of the importance successively attained by different towns in the Valley.

1. History.

According to Ibn ʿAbd al-Ḥakam (Futūḥ Misr, 169), the Arab troops arriving from the north, in the year 20/641 or shortly thereafter, at first ignored the existence of the Fayyum and proceeded along the Valley under the leadership of ʿAbd Allah b. Saʿīd, to whom control of Upper Egypt had been entrusted from the outset, until they encountered the forces of the kingdom of Nubia [see nūba]. An official treaty or bakt [q.v.], a revival of the Graeco-Roman pactum, was established with the Nubians from 31/652 onwards. But
in the interests of maintaining a recognised border, it was logical that the principal garrison of Upper Egypt should be established at Aswān, while in the Valley there were located only a few Arab military installa-
tions, ranged along the Nile, quite isolated among the Coptic populations, which sometimes comprised large conurbations such as Ashmūnayn and Aḥkhīm (al-
Baladhūrī, Futūḥ al-buldān, 217). From the outset, Upper Egypt seems to have had its own governor, distinct from the governor of Fustāṭ (al-Kindi, Wulāt, 11; Ibn ʿAbd al-Ḥakām, Futūḥ Misr, 173), but this may have appeared to the caliph in the course of the maintenance and order; the governor of Fustāṭ spent six months in Upper Egypt in 112/730 with the object of establishing there the basis of a taxation system. Anti-
fiscal revolts seem to have erupted from the end of the 1st/7th century onward, before the great revolt of 121/739, which was suppressed with severity (al-
Kindi, Wulāt, 81). Subsequently, Upper Egypt does not seem to have been involved in the other revolts oc-
curring in the Delta.

Onomastic analysis of the funeral inscriptions of the cemetery of Aswān, which are known to this day, shows that conversions must have begun at a fairly early stage around the southern garrison. Further-
more, an Arab immigration, apparently with a Kaysī majority, took place directly from the Hidżāz, across the Red Sea. Overall, the Arab population of Upper Egypt increased considerably in the course of the 3rd/9th century. On the one hand, possibly following measures taken under al-Muṭtasim in 218/831 to establish there the basis of a taxation system. Anti-

Kuraysh), to contain them towards the north. Kaysi groups thus played an official role, also controlling the Valley of the Nile from Fusjat to Aswan, promoted by Fatimid policy, ultimately found expression in major changes, essentially resulting from the crisis which destabilised the caliphate in the 460s/1070s. Between 465/1074 and 466/1075, it is known that negro troops in conflict with other elements of the army, expelled from the Delta and from Cairo, arrived and established themselves in the region of Aswan, and that all the Bedouin groups of Upper Egypt, from the Qa‘afira in the north to the Banu Kanz in the south acquired, on account of the governors of Upper Safid and Lower Safid are encountered for the first time (Sidjilat musaniiriyin, 185). Kus became the capital of Upper Safid. Its importance grew gradually: following its selection by the authorities, the track from Kus to ‘Aydhab became the principal caravan route towards the Red Sea; in 516/1122 a mint was established there, which no doubt continued to function until the arrival of the Ayyubids. From the 530s/1130s onward, the governors of Upper Safid acquired, on account of their resources and the troops at their disposal, such status in the Fatimid realm that they intervened directly in the crises which marked the end of the caliphate. The result was evidently the laying of the foundations of a Muslim city at Kus. The authority of the governor often extended to the north as far as Akhmim. In Lower Safid, the importance of Asyut which existed at Kus, and there were madrasas of Muslim elites in the region, which owed much to the Bedouin of Syria, remained sparsely Islamised. The Arabs were kept under strict supervision, and the authorities continued to rely on the same tribal groups. When in 671/1272 Sultan Baybars [q.v.] inflicted the first blows against the Nubian kingdom, the Banu Kanz offered their assistance; it is known that this led to the installation at Dongola of a Muslim prince in 716/1316, and to the control, at least temporary, of the Banu Kanz over Nubia; but this was also the end of a sedentary power whose presence hitherto had played an important role in denying access to the Bedouin tribes, to the east of the Nile, but also to the west. Meanwhile, in Upper Egypt, Bal‘ and Qubayna (Yemenis) survived hostile, taking advantage of all the opportunities offered by political troubles in Cairo, or by Mongol aggression, to rebel in the region of Asyut and of Manfalut, or to cause disruption on the routes between the Nile and the Red Sea. The definitive accession to power of al-Malik al-Nasir Muhammad [q.v.], which owed much to the Bedouin of Syria, seemed to mark an improvement in relations between the Mamluk power and the Arab groups; it was manifested especially by the strict supervision hitherto exercised over the tribes. Groups...
of Tayyib and of Djudham thus came from Syria to join the Yemeni groups of Middle Egypt, and by way of the darb al-arabim, their advance towards Central Africa, which was quite unhindered, began from Manfalût. From 721/1321-2 onward, Manfalût (already a royal idā), became a famed slave market (al-Uddfûwî, Ḫâris, 427). The result of these developments appeared after the death of the great sultan: the Yemeni groups (under the leadership of the ʿArak, from the Djudham rather than the Dhubayna), more numerous and enriched by their new activities, became uncontrollable, pressing ever more heavily on the orders which had hitherto been held in check, to the point where the ruling power was forced to make concessions, agreeing to rely henceforward on the support of these Arab groups which had hitherto been hostile, entrusting to them responsibility for the maintenance of order and some ikās.

The consequences of this evolution were significant in an Upper Egypt where epidemics, from the mid-8th/14th century onward, rendered more precarious the sedentary structures confronting the nomads. The Yemeni groups, which had outflanked the Banu Kanz by way of the south, forced them to withdraw towards Aswān, and from 767/1365-6 onward the latter, turning hostile, made the route to ʿAydhab impassable (al-Makrîzî, Kastil, ed. Wiet, iii, 300; from this date, the port ceased to be a centre for major commerce, and there are no grounds for suspecting deliberate destruction on the part of a Mamlûk sultan). The transport of spices was for some time conducted by way of Kuṣayr [q.v.], and then, as the extortions practised by the Mamlûk authorities in Upper Egypt proved a greater threat to the agression of the Bedouin, the merchants preferred to tackle the difficulties of navigating in the Red Sea, unloading the precious merchandise at Tôr, at the foot of the Sinai peninsula, where a port and a market were being developed (Ibn Dukmâk, Kisiâ al-Inštâr, 54); from here, spices were transported directly to Cairo and no longer passed through Upper Egypt. The cessation of this traffic had the effect that Upper Egypt, increasingly difficult to control, lost much of its interest for the Muslim elite of the region; agricultural land was exploited and the production of sugar cane kept the presses supplied. The sultan, whose authority no longer extended as far as Aswān (the land of the Banu Kanz began at Kom Ombo) was no longer able to maintain in the country sufficient forces to impose his authority. In 782/1380, the grand amir Barkûk [q.v.], soon to be sultan, took the decision to install in the region a group of Hawwâra [q.v.] Berbers, hither-to in Behera, where pressure from the Bedouin was proving too strong (al-Makrîzî, Bayân, 60). They became the new supporters of the authorities against the Arab groups, more efficacious than the nāʾâb of Asyût (a function which seems not to have lasted long), whose powers extended to Bahnasâ and Arîbī the regime in the second phase of the sultanate of Kâyîbîb [q.v.], foiled these aspirations. After the death of this sultan there was even a resumption of large-scale fiscal expeditions to Upper Egypt, these being the only means of collecting taxes, conducted this time by royal dawâddrs. The Bedouin had clearly decided to exploit the opportunities provided by the confrontation with the Ottomans. After the defeat of the Egyptians at Arâk, from the beginning of the 9th/15th century, the sultans attempted to restore their authority over the territory of Girgâ, but difficulties encountered anew by the régime in the second phase of the sultanate of Kâyîbîb [q.v.], displaced fellow-tribesmen to the north of Kuṣ. Upper Egypt at the end of the 8th/14th century was thus traversed by Bedouin groups, the most sub-missive of which could only be obedient to a stable power. At the time of the second Mongol invasion, political disorders and then a plague provoked a crisis at the beginning of the 9th/15th century in which the Mamlûk state narrowly avoided total dissolution. There can be no doubt that the insurrection was general; in 804/1401, the nāʾâb al-saltâna of Asyût and the governor of Manfalût were both killed by Bedouin. Subsequently, nothing is known of events in Upper Egypt until 816/1413, at which date the sultan’s ustâddîs brought from Upper Egypt to Cairo horses, camels, cattle, sheep, cereals, weapons, slaves, gold and jewellery seized forcibly as compensation for taxes which had not been paid during the crisis. It was not until the sultanate of Barsbây [q.v.] that the administration of Upper Egypt regained a more regular aspect, less suggestive of official pillage of the land. At Girgâ, the Hawwâra had become respectable land-owners; the amir Muhammad b. ʿAbd al-ʿAzîz had founded the old mosque of the town; his successors, some of whom absorbed good Islamic culture and were regarded as saintly men, were now accepted by the Muslim élite of the region; agricultural land was exploited and the production of sugar cane kept the presses supplied. The sultan, whose authority no longer extended as far as Aswān (the land of the Banu Kanz began at Kom Ombo), was obliged to reckon with the amirs of Girgâ, but difficulties encountered anew by the régime in the second phase of the sultanate of Kâyîbîb [q.v.], paid taxes in kind, and in inspecting the condition of the canals. From 784/1382 onward, an amir of the kâsfî, whose powers extended to Bahnasâ and Arîbî
The Ottoman state officially recognised the authority of the Banū ʿUmar b. ʿAbd al-ʿAziz until the beginning of the 11th/17th century; from 980/1570 onward, advantage was taken of familial tensions among the Banū ʿUmar to install at Girgā an Ottoman detach- ment under the orders of a sandjak, who exercised authority in conjunction with the amīr. In 1019/1610 or later, the power of the Hawwāra ʿamīr came to an end, and the sandjaks were replaced by beys. Ottoman administration was thus ultimately established in Upper Egypt and the land was divided into kāhils. The beys and the kāhils were less powerful than them and were regarded as strangers in the land. Out of the conflicts between the numerous candidates for power among the Bedouin, from the 1150s/1740s onwards, another major Hawwāra family emerged, the Banū Hummām of Farshut, who suc- ceeded in imposing their authority until the interven- tion of the Cairo authorities in 1183/1769. Under their domination, the south of Upper Egypt enjoyed a degree of prosperity; the commerce of Kusayr increased, leading to the resurgence of Kena, and commerce with the lands of Black Africa brought them ad- ditional resources. They intervened thereafter in the nomination of the beys at Girgā, and the 12th/18th century was once more for Upper Egypt a period of Bedouin hegemony; the beys and the kāhils were less powerful than them and were regarded as strangers in the land. Out of the conflicts between the numerous candidates for power among the Bedouin, from the 1150s/1740s onwards, another major Hawwāra family emerged, the Banū Hummām of Farshut, who suc- ceeded in imposing their authority until the interven- tion of the Cairo authorities in 1183/1769. Under their domination, the south of Upper Egypt enjoyed a degree of prosperity; the commerce of Kusayr in- creased, leading to the resurgence of Kena, and caravans of slaves arrived from the sultanate of Fund- kāshifs. The beys and the kāhils were less powerful than them and were regarded as strangers in the land. 2. Dialects.
In a broader sense, the Arabic dialects of the Sa'īdī are those of the peasants and the Bedouins who dwell in the Nile valley, the oases of the Western Desert and the Eastern Desert. In a narrower sense, the dialects of the Sa'īdī are those of the peasants, as they are spoken in the Nile Valley from al-Džīza in the north to Aswān in the south where the domain of the Nubian language begins. There are super-regional varieties used in popular songs, ballads etc., and poetry by ʿAbd ar-Raḥmān al-Abnūdī is available in printed form.

These peasant dialects are relatively well known through the data collected for the Egyptian dialect atlas and other, more detailed studies (see Bibli.).

Some principal isoglosses which distinguish these Sa'īdī dialects from those of peasants in the north (in brackets) are:

1) preservation of long vowels before consonant clusters: māska (maska)
2) the closed antepenultima receives stress: mādara (madrāsā)
3) no stress on the -i/-ai of the 3.f.s. perfect: darābitu, darābitu, darābitu etc. (darābitu)
4) i.s. perfect gift: "I came" (git)
5) plural forms as bibān "doors", fisān "axes" (ibbān, fisān), and dukāra "males", sibā'a "lions"
6) numerous lexical items: tūrīya "hoe" (fās), fisān "axe" (bala), sa'āfīf "palm leaves" (sūf), farrāqa "chicken" (faraqā, bāhā, bāhā, būkha "duck" (bṭa), hātī wa hōi "stable, cow shed" (zīri, zīriyya)

Two major groups of dialects can be distinguished within the Sa'īdī: Middle Eastern ME (ME) from the out- skirts of al-Džīza to Abū Tīdī (some 25 km south of Aswān) and Upper Egyptian (UE) proper from Abū Tīdī to Aswān. Whereas ME has basically the same rules of elision and insertion of /i/ as the Delta dialects, excluding those of the Sharkiyya province, UE is strongly influenced by Bedouins, apparently of western origin, who settled there in the past and inter- mingled with the local population. Therefore, in ME there is no elision of /i/ after -CC.yktūba "they write" and insertion takes place after -CC ibn kalb "son of a dog"; in contrast to UE yktūba - yktūba and kalb, except UE 2 (see below) which resembles Southern ME (SME) not only in this respect. Further, all UE dialects show glottalised /t/ [t] like the Awlād 'All at the Mediterranean littoral, a verbal noun of the 12nd stem of the type xaftīl - sittīl "furrowing" (taxīl) and the plural types fūlah, fūlād, fūlāsīl as in ḥīmāna "horses", bāsi'īl - bāsi'āl "buffalo calves". The dialect-
tological distinction between ME and UE is consistent with differences in the material culture of the peasants, see Winkler, 1936, 455. ME and to some extent UE 2 seem to represent an older type of Sa’di Arabic less influenced by Bedouins.

Other isoglosses permit further subdivision of the two regions into four subgroups: NME 1 (south of al-Djiza, northern Bani Swafy province and al-Fayyum), NME 2 (southern Bani Swafy from al-Faqlan to al-Minjy), SME (to Abu Tidji), UE 1 (approximatively to Nadj Hammadi, on the east bank from Kus farther south to the altitude of Arman, on the west bank from al-Ballâs to al-Kurna), UE 2 (the Kena bow on the east bank approximatively from Nadj Hammadi to Kus and on the west bank to al-Ballâs), UE 3 (on the west bank from al-Kurna (al-Ba’rât) to Esna), UE 4 (on the west bank from Esna to Gharb Aswan, on the east bank from the latitude of Hammadi to Kus and on the west bank to al-Nadj). Linguistic borders in UE tend to be somewhat blurred and the dialects may differ from village to village. The distinctive features of these dialect groups include:

(7) preservation of /i/ after -x-C: miskit ‘she took’ in NME, a feature which sets NME apart from SME and links it to the western and northern parts of the Delta and the oases

(8) insertion of /a/ in a cluster -Cr-: bukara “tomorrow” in NME which separates NME 1 from NME 2 with the borderline near al-Faqlan; /g,g/ for /k/ and /g/ beginning of /̈/ from NME 2 to the south

(9) /g,g/ for /k/ and /g/ instead of /h, /g/ beginning of /̈/ from NME 2 to the south

(10) preservation of diphthongs /aw/ and /ay/ in NME 1: katun “mortar”, batu “house” (bun, bêt elsewhere)

(11) allomorphy of the Ind and IIfid stems: one allomorph for perfect and imperfect in NME: kallam - yikallam (NME 1), kiltim - yikiltim, allim - yikallim (NME 2), in contrast to two allomorphs with morphological distribution in SME and UE: kallam - yikallam

(12) preservation of /a/ in kattir “much” and yimisik “he was seized” in SME and UE 2 (kitir, yimitik elsewhere)

(13) paradigmatic levelling in the imperfect, either complete, such as kitub - niktbu in UE 1 and UE 3, or incomplete, such as akht - niktibu in UE 2.

(14) vowel alternations a > i,u in UE 2, in contrast to two UE 1.

(15) genitive exponent: hinin in UE 1, hawn in UE 3, 4, alit - allit in UE 4.

(16) i-stem perfect i-type: kibir in ME and UE 2, UE 4, kibir in UE 1, ikbir in UE 3.

(17) ba-prefix for present tense in UE 2 and UE 4.

(18) stress on the final syllable of words like shgd “winter” in UE 1 and UE 3 (folia elsewhere).

(19) vowel alternations a > i,u in UE 3: masak “he took” - miskat “she took”, bagar “cows” - bagura “a cow”

(20) /a/ in word-initial position instead of /i/ in UE 4: anta “you m.”, abna “we”, ali “which”, al-“the”, asfaddal “please”, ambak “yesterday”, awad “another” etc. a feature shared with Central Sudan.

Fem.pl. forms, a Bedouin feature, such as yikaban “they write” occur in UE 3 and 4. For historical aspects, see Woidich, 1994; for Coptic remnants in the lexicon, see Behnstedt, 1981.

Very little is known about the speech of Bedouins found mostly at the fringes of the Nile valley, the Oases and in the Eastern Desert. The dialects of the four Western Oases are closely related to ME by syllable structure, but deviate in many other respects (see Behnstedt-Woidich, 1982). The ‘Ababida in the Eastern desert (Bir ‘Umm il-Fawaxir) seem to speak a Sudanese type of dialect, with rigidity “her leg,” and with a stressed final vowel in habbi “my rope” and hamri f. “red”.

(M. Woidich)
continuity—or geographical contiguousness—required by the isnād in the religious sciences, i.e. the chain of guarantors for a fact which one wishes to carry back, generation by generation, to the Prophet or his Companions. The success of Sā'īd’s little work may well have stemmed from this trait, as set out in its title, *Tabāki al-umam* “The generations of the nations”. The kādi of Toledo thereby inserts within the classification of the philosophical sciences a principle directly inherited from the religious science disciplines, much more familiar to the immense majority of his readers. He established the truths of mathematics or incorruptible rectitude for hadīth, by an irreproachable isnād which attests its exact transmission and preserved integralness, right from their origins.

From this point onwards, a question arises. Should one see in Sā'īd, in accordance with M.-G. Baïty-Guesdès, one of those philosophers of which al-Andalus offers examples in the 6th/12th century, one of the majority of his readers. He established the truths of mathematics or incorruptible rectitude for hadīth, by an irreproachable isnād which attests its exact transmission and preserved integralness, right from their origins.

The minister’s favour had, however, a more profound effect. As the seat of a caliphate since 317/929, Cordova intended to surpass Baghdad, and held mastery of the Arabic language as one of the stakes in this contest. The Andalusians freely admitted the fluency of the Easterners, but they stressed the solecisms which these Arabs, over-confident in their own natural speech, inflicted on the language of the ancient poets. The grammarians al-Kāli [q.v.], who came from Baghdad, and al-Zubaydī had thrown lustre on the reigns of the caliphs ʿAbd al-Rāthmān III (d. 350/961) and al-Hakam II (d. 365/976). Al-Mansūr’s usurpation added a question to the debate. The minister had in his turn to overshadow, by his merits, the glory of his masters, as they themselves had claimed to throw the star of Baghdad into the shade. Sā'īd was openly welcomed as the al-Kāli of al-Mansūr. His major work *Fusus fi 'l-ʿadāb wa l-ʿaʿāf ār wa l-ʿabbār*, written in 385/995, prided itself on thrusting the Nauṣādī of the old master into oblivion without borrowing the least example from that work.

In practice, Sā'īd’s preferences were for lexicography (lughah) rather than for grammar, and for the poetry which constituted its treasury. Put to the test when he first came to court, Sā'īd became worried over the grammatical obscurities which were hurled at him, but triumphed in the explanation of a verse by Imrū’ al-Kays. He could not have done anything better to please the ḥādīṯ, who on every occasion cultivated the purest of the Arabic values upon which the Cordovan caliphate aimed to base itself. The only other work of Sā'īd’s which is mentioned was precisely a “story” in the Bedouin taste which he wrote for his master.

Altogether, the opinion of posterity in al-Andalus remained a guarded one. The Easterner was reproached for his boorishness, and in this there may perhaps have been a discreet condemnation of the regime which he served. According to al-Makkāri, the Arab Sā'īd came out worst in a linguistic dispute with a knowledgeable young slave boy. Above all, Ibn al-ʿArīf [q.v.], the tutor of al-Mansūr’s children, after having failed in convincing the latter of Sā'īd’s plagiarism, ridiculed Sā'īd by inventing a factitious book and author whom Sā'īd soon claimed to have read. Al-Mansūr was furious when the *Fusūs* thrown into the river, before pardoning him. The world of scholarship was less indulgent.

After al-Mansūr’s death (392/1002), Sā'īd was less often seen in the entourage of his son al-Muzaffar [q.v.]. Ibn Ḥazm, then aged 12, saw him, however, still declaiming one of his poems. The civil warfare (399/422-1009-31) caused him to move to Dēnía, and then to Sicily, where he died, in 417/1026 according to Ibn Ḥazm.

**SA‘IDA (French form, SA‘IDA)**

A town of Algeria, the chief-lieu of the department (wilāyā) of the same name, situated 175 km/108 miles from Oran (Wahrān [q.v.]) and 95 km/59 miles from Mascara (al-Mu‘askar [q.v.]), at an altitude of 900 m/2,950 feet. It is on the wādī Sa‘īda, in touch with the Causse of Oran (hills of Sa‘īda) and the High Plains, limestone plateaux which form part of the Atlas of the Tēlīs, to
the east of the hills of Ouarsenis (Wanshans). The
town had about 30,000 inhabitants and the depart-
ment about 200,000 in 1987. The region is suitable for
raising cereal crops and for sheep rearing.

The recurrent strategic position which the site has
retained through history, ever since it was ocupated
by a Roman settlement, was highlighted in modern
times when it became one of the headquarters of the
amir 'Abd al-Kādir [q.v.], who built a fort there but
dismantled it in 1841 on the approach of French
troops under General Bugeaud. In 1844, General
Lamoricère constructed from it another fort slightly
north, which became the nucleus of the present
town.

(C.E. BOSWORTH)

SA'IĐA GILĀNI, Indo-Persian poet of the
11th/12th century.

Details are lacking regarding his early life. He went
to India from his native Persia during Djiḥāṅgrī's
reign (1014-37/1605-27), and lived on to serve under
his successor Ẓahār Djiḥān (1037-68/1628-58). Apart
from poetry, he was skilled in calligraphy, engraving
and assayng of precious stones. Djiḥāṅgrī gave him
the title of Bēbdāl Khān, perhaps as an appreciation
of his talent since bēbdāl means 'matchless'. In addi-
tion, he was appointed officer-in-charge of the royal
jewellery, a position which he continued to hold
during Ẓahāh Djiḥān's reign. Under the latter ruler,
he also received the command of 800 infantry and 100
cavalry.

In 1037/1628, soon after becoming emperor, Ẓahāh
Djiḥān decided that a lavish throne, inlaid with gems,
should be constructed for his personal use. The charge
of this enterprise, which later materialised in the
celebrated Peacock Throne (Ṭakht-i Tdwus), was
entrusted to Sā'īḍa Gīlānī, who supervised the project.
It took seven years for the completion of the throne,
which was inaugurated on Nawrūz 1044/23 March
1655. To commemorate this event, Sā'īḍa Gīlānī
composed a kāsida of which only remnants have sur-
vived. The kāsīda is said to have contained 134
couples, each line of which carried a chronogram.
Some of the chronograms were related to Ẓahāh
Djiḥān's birth (1000/1592), some to his coronation
(1037/1628) and the majority to his gracing the
thrones. His poetry earned for him royal recognition.
Very little can be said about Sā'īḍa Gīlānī as a poet,
since his extant writings are limited to a handful of
works: two kasidas, five mathnawis of some 5,000
couples dealing with Djiḥāṅgrī's reign. His poetry earned for him royal recognition.
14 Shahrīwār 1027/26 August 1618 he was
rewarded handsomely by Djiḥāngīr for a kāsīda
composed by him for the emperor, and in 1042/1633 he
received a similar treatment from Ẓahāh Djiḥān for
composing a poem which described the courage of
Prince (afterwards Emperor) Awrangzīb in an
elaborate combat. Sā'īḍa Gīlānī's special skill lay
perhaps in the making of chronograms. Apart from
those mentioned earlier, he composed them on such
events as Djiḥāṅgrī's conquest of the fort Kāṅgrā
(1029/1620), his building a mosque there (1031/1621-
2) and the death of his wife Mumtāz Mabhān
(1040/1631 [q.v.]).

(MUNIRuddIN RAHAMAN)

SA'IIFA (s.), pl. sawīfī (<ṣawī ‘summer’), sum-
mer raid or military expedition (see Lane, 1756;
Dozy, Supplement, i, 857).

1. In the Arab-Byzantine warfare.

The term is used by the early Islamic historians to
denote the raids of the Arabs into Byzantine Anatolia.
These were normally mounted annually, over a
period of some two centuries, beginning during the
government in Syria of Muʿawya b. Sufyān [q.v.],
from ca. 640 onwards. They tailed off in the
3rd/9th century as the ʿAbābāṣīd caliphate became
racked by internal discord and as the Macedonian
emperors in general turned the tables and took the
offensive against the Arabs.

These expeditions were launched during the summer
months, in order to avoid the harsh wintry condi-
tions of the Anatolian plateau, from bases in the
frontier zones of northern Syria and Mesopotamia.
Given that Muslim Spain (al-Andalus) was geographically a European entity with Marches (see below), beyond which there was at all times an independent Christian presence to be reckoned with, the appearance of the sawdīya in Umayyad Spain is not surprising. Of the importance it came to assume in Iberian Peninsular history one clear indication is the passage of al-sawdāʾya into Castilian as acefia (whence, for instance, salir en campana de acefía "go on a summer campaign"). Although in Arabic chronicles such expressions as ʿasaṣṣufūd bi ʿaṣṣufūd (lead/send (s.o.) to lead the army) on the occasion of an expedition against the Christian north of the Peninsula, they occur also in the context of campaigns within al-Andalus itself against centres of rebellion or Viking raiders [see al-Maqūsī]. Thus it was not with the identity and location of the enemy that sawdīya was primarily and originally associated, but with the time of year at which an expedition was launched—which could be as early as 1 May or as late as the end of July, though the norm would seem to have been at a time midway between these two extremes. When necessary, expedient or limited in scope, campaigns were conducted outside the summer season and likewise took their name from the time of the launch. Hence one in winter was a shaitya, one in spring a rabsiyya and one in autumn a kharṣiyya (on these last two in the time of the ʿAmirid al-Mansūr [below, para. 4], see al-ʿUdī [979, 292]).

By the end of the reign of Alfonso I, king of Asturias (739-57) and conqueror of much of north-west Spain and Portugal, perhaps as much as a quarter of the Peninsula formed no part of al-Andalus, and of that proportion a fair share was an uninhabited times known as the Marches (al-thughūr). Of these there were originally three: the Upper (al-aṭlāf), the Middle (al-awsat), and the Lower (al-udnā). Each was controlled, not by a civil governor, but by a military commander (šābād) based at Saragossa, Toledo and Mérida, respectively. Such was the position during the Emirate of the 3rd/9th century, though with the gradual contraction of al-Andalus changes had already begun to take place that in the long run were to result in the reduction of the thughūr—under which those of the asturias in the North-West and one, reaping a particularly rich harvest of booty, against Gerona and Narbonne in the North-East. For his son al-Hakam I (159-206/796-822 [q.v.]), obliged for much of his long reign to quell insurrections from the Marches down to Cordova itself, sawdīya were anything but the annual events they became under his son ʿAbd al-Rahmān II (206-38/386-822 [q.v.]), who, despite some of the contest of expeditions, almost every year of his reign against the Asturio-Leonese kingdom. In operations against the Franks in what is now Catalonia he entrusted command in 212/828 to his Umayyad kinsman ʿUbayd Allah b. ʿAbd Allāh al-Balansi ("of Valencia"), a man whose Arabic designation šābīh al-sawdāʾya is worth noting here if only because it seems not, as may be thought, to have derived from any special office or rank he held, but was, rather, an ad hominem style acquired through the long and distin-
guished services he rendered as an organiser and leader of sawdīya.

From among the constants and many variables of the Umayyad sawdīya—under which those of the ʿAmirid ḥādhīb [q.v.] al-Mansūr (Almanzor) [q.v. at vol. VI, 430 ff.] are to be subsumed—only one or two can be touched upon here. Of most constant was the need, imposed by Cordova's remotesness from the far north, to ensure the smooth progress of troops towards a distant base from which, once rested and marshalled, they would take the field. To delay till the last moment disclosure of the chosen route was one factor offering Cordova the best prospect of success for the outward journey. By far the most crucial factor, however, was its need to provision its troops en route to the March. As it was normal to have the army live off the land in areas to be crossed, ascertainment of the state of crops and harvests was a precondition of the launch of a sawdīya, for drought could lead to the cancellation of a sawdīya and the frustration of plans such as even ʿAbd al-Rahmān III [q.v.] had to suffer, for example, in 303/915. Years later Ibn Abī ʿAmīr (al-Mansūr, 571/981) was to provide against any similar setback by creating, notably in Cordova and strategic forward positions, vast stockpiles of grain, which lasted over several lean years from 378/988.

The recruitment, composition, organisation, funding and equipment of troops for Umayyad sawdīya are, like their precise aims and modus operandi, beyond the scope of this article. What should be said, however, is that the ḥuṣnād of our sources’ expression al-ṣawdāʾya wa l-ḥuṣnād were provincial recruits enlisted for a sawdīya to swell the regular army. Instructions for their recruit-
ment went out as early as February, and after mobilisation (istifār) in the summer they would converge on the outskirts of Cordova. Around the same time, commanders in the Marches would be ordered to prepare their contingents to join the Cordovan forces on arrival. Whether or not the ruler was to lead a sawdīya in person, he would normally oversee preparations, which could last as long as 30 days. From his palace he would process, amid popular acclaim, with his guard and entourage to royal quarters within his troops' encampment on the great Fāsib al-Suṣrākūd ("pavilion plain"), north of Cordova. One notable ceremony to follow much later was the solemn fasten-
ing of banners (ṣaḥd al-alwāsya) to commanders’ lances in Cordova’s Great Mosque on the Friday before the troops departed. Upon their return the banners would be replaced on the walls of the mosque.

Whatever profit the Umayyads may have derived
from even the most successful of their sawdha, it was
certainly not any lasting extension of the boundaries
of al-Andalus. That such was not the basic aim of the
sawdha (Levi-Provencal, Hist. Esp. Mus., ii, 103 ff.),
may well be true, but that seems no less true is that in
al-Mansur's hands the sawdha became less of a routine
response to Christian initiatives than an assault of
unexpected and unprecedented ferocity as it was
drawn into the Abbâsid period. Moreover, Ibn al-
Azhîr and al-Sam'anî noted the usage of al-saîgh as a
nuha among Muslims from the 2nd/8th to 4th/10th century.
Some of the persons were expert transmitters of hadith in the mediæval Islamic
world, and at least one of them was a well-known
Arab writer called Ibn al-saîgh ('goldsmiths' son').
Besides being reliable transmitters of religious
knowledge ('ilm), some goldsmiths had attained up-
ward social mobility. The customary law of kafa'awas
liently applied to the goldsmiths, who could marry
outside their own social group into the wealthy and
respectable groups of the bourgeoisie such as the
clash-merchants (kazzâz) and perfumers ('attât).
Early Islamic cities such as Fustât, Baghdad, Cairo,
Damascus, Tunis, and so on had separate goldsmiths'
markets (sîk al-sâîgh). Al-Ibâhihi, writing a rare tale
about a goldsmith, illustrates the goldsmith's guild
within the master-craftsmen (mu/a'llim) employed and trained journeymen
(jânîn, pl. jumânûn) in workshops and earned handsome wages. Literary sources
provide evidence regarding the existence of goldsmiths' guilds over the centuries in many Islamic
cities of the Middle East until modern times.

southern Adharbaydžan, on the right bank of the Dijaghatu, the modern town of Shahr Dizh. In the south the boundary runs a little over the river Sârûk, a tributary on the right bank of the Dijaghatu. In the north it is bounded by the district of ‘Adîvari, in the east by the province of Khams. The name is derived from the Mongol sayin ‘good’.

The local Turkish Afshar tribe, of which a part had to emigrate to Urmia to make room for the Çardowël (Çardowlı) tribe of Lur origin (the district of Çardow in the Saymara), were brought by Fath ‘Ali Shâh from Shiráz at the beginning of the 19th century. The chief of the Afshars had to command about 5,000 men. In 1830 Shân Kat began to be destroyed by a Kurdish invasion under Shâhk ‘Ubâyîd Allâh. Shân Kat, formerly occupied by a Persian garrison, guarded the entrance to Adharbaydžan through the Dijaghatu valley. The caves of Kerfût with a Greek inscription, described by Ker Porter (Traité, ii, 538-52; Ritter, ix, 816), as well as the site of Takht-î Sulayman (the ancient Gazaka, al-Shîz of the Arabs; cf. Marquart, Extönahr, 108), are in the territory of the Afshars of Shân Kat. The lake of Camli Göl (near the village of Bâdarlî) with a floating island is likewise well known. A section of the Afshars belong to the Ahl-i Hakk sect which may be mentioned here. The name of the device derives, with some stretching of the imagination, from the form and shape of the main astronomical markings.

speaks of the "country of Gharmāniya, which is the land of the Sakaliba." Ibn Fadlan, who journeyed to Volga Bulgharia in 309-10/921-2 (the subject population of which included, in addition to various Turkic groups, Finno-Ugrian and other northern peoples), termed the Bulghar ruler "King of the Sakaliba" (see Togan, Ibn Fadlan’s Reisebericht).

The Arab accounts derive the eponymous Saklab from Mādhāb b. Yaḥūf (al-Maṣʿūdī, Ibrāhīm b. Yaḥūf) or Ḫā̀dūn b. Yaḥūf, Al-Kazwīnī (Αὔγαρ, 614), however, derives him from the descendants of Liyāk b. Kālikhīm b. Yānān b. Yaḥūf and presents him as the brother of Rūm, Arman and Firand. According to the tale preserved in the anonymous Mughūnl al-tawdīrīkī, 103-4, Saklab’s father, whose mother died immediately after his birth, was raised on dog milk and developed a canine disposition. His son was called "Saklab" (hence the popular etymology found in Gardīzī who derives this name from ṣag-ḥābi < Pers. ṣag "dog"). Later, as each of Yaḥūf’s children acquired a land of their own, Saklab struggled with Rūs, Kimārī and Khazar for possession of a territory, but was defeated. He was thus obliged to make his home in the north. This homeland of the Sakaliba is described as very cold, with homes built underground and heated by steam, a theme found in a number of the detailed descriptions in the Islamic geographical literature with the Sakaliba lands. Gardīzī, in his tale of Kirghiz (Khirkhzī) origins, relates that the leader of the Kirghiz “was from the mass of the Saklabūs.” Having killed a Byzantine envoy, he was forced to flee to the Khazars, Bashdjirts and Tokuz Oğuz. There he was joined by other Sakaliba. Gardīzī concludes that this is why “the features and traits of the Saklabūs are to be found among the Kirghiz (such as) reddishness of hair and whiteness of skin” (tr. Martinez, 124-6, ed. Barthold, 28-9). This constitutes one of several indications of the presence of an ancient Europoid strain among the Kirghiz. It also shows the close association, in the Islamic geographical literature, of a certain fair-haired, ruddy complexioned population type of Eurasia with the Slavs.

The later Perso-Islamic historical tradition, in a notice of dubious historicity, mentions a “pass of the Khazars and Sakaliba” in connection with the activity of the Sāsānīd Dīmāsp, who briefly ruled Persia 496-8. These and other notices purporting to record their presence in the north Caucasian zone in the early decades of Islam (e.g. Baḥrānī) are almost certainly anachronistic. Paradoxically, we are probably on surer ground with references to Slavs that had been transplanted to Asia Minor or were serving in Byzantine forces that might have had contact with the Arabs as early as the decades preceding the advent of Islam. The earliest evidence for Arabo-Slavic contacts is found in the Byzantine sources. The 10th century chronographer Theophanes, ed. de Boor, i, 348, notes that in 615/616-5, some 5,000 Σκαλιβάν ζησον on a great river called μάχη (Tanais). The Khazar territory, capturing the city of al-Bayda (probably Sarkel on the Don). Proceeding further, as we learn from the account of Ibn Aṭurança, it is unclear whether this Slavic urban settlement is to be sought in Asia Minor or in the Balkans, although the former seems more likely. Several decades later, in a different theatre of operations, the Umayyad commander and future caliph Marwān b. Muḥammad, in 120/737 made a daring advance into Khazar territory, capturing the city of al-Bayda (probable Sarkel on the Don). Proceeding further, as we learn from the account of Ibn AṭFrançois (viii, 71-2, see also Togan, Reisebericht, 295 ff.), he “attacked the Sakaliba and the various infidels who lived beyond them”, taking prisoner some 20,000 families. Marwān continued his advance and made camp on the “River of the Slavs” (nahr al-Sakāliba). In this region, he succeeded in capturing the Khazar Kagan and compelling him to embrace Islam. In a collection of notable addresses by Ibn Ṭawdhīk, 207-8, has a brief notice on this campaign, noting that the 20,000 captive Sakaliba who were settled in Khākhūt (Ḵāḵēt’e in Georgia) later revolted, and Marwān “attacked and killed them.” The location of this nahr al-Sakāliba remains controversial. It has often been identified with the Volga (Togan, Reisebericht, 305). Another view (ibid., 307), however, identifies these Sakaliba with the Būrtāz, Suvārā, Asgil and other Turkic and Finnic peoples of Volga Bulgharia. A passage in al-Maṣʿūdī’s Tanbīh, 67, however, brings us southward to the Don. He remarks that “many settlements of the Sakaliba and other nations who penetrated deep into the north” are on a great river called ṭūḥ (Tanais). The Ḥudūd, tr. Minorsky, 75, 216, reflects the confusion of the medieval Muslim historians and geographers regarding the rivers of the Sakaliba and Rūs lands, presenting us with a conflation of the information on the Don and Volga. It notes that the river of the Rūs “rises from the interior of the Sakaliba country ... skirts the confines” of the three Rūs urban centres and the Kipčak land and “empties itself into the river Atil.” With later authors the situation is not significantly clearer. Abū Hāmid al-Gharnāṭī (473-565/1080-1170 [q. v.]), a native of Muslim Spain who spent much of his adult life in the Volga region (from 525/1131 largely in Sāsānī-Sakālibān), passed through the lands
of the Şakaliba (actually the Rûs region) on a journey that eventually brought him to Hungary ca. 1150. He reports that he took Bulghar by ship on the "river of the Şakaliba", by which he appears to have designated the Oka (ed. and tr. Dubler, 22/61, 196-9). His contemporary, al-Idrisî (ed. Bombaci et al., viii, 909-10), but without al-Gharnâtî's first-hand knowledge, designates the Don as the naḥr nisâyya.

With regard to other riverine centres, al-Mas'ûdî (Tanbih, 67, 183) also mentions the "Danubâ"/Danûbî (Danubian-Bulghar) rivers on which Şakaliba settlements are to be found. Around the Małâwa, in particular, were the habitats of the Nûm-ûn (< Slav. Nemìn "German") and Murûwât (Moravians, see below).

The same Marwân who led the successful 120/737 campaign, when he became caliph, placed Şakaliba colonies along the borders with Byzantium in Cilicia (at al-Ḫusûs), northern Syria (at Salmân, near Kûrûs/Cyrhrûs) and the upper Euphrates (Hiṣn Ţiqûd/Arm. Kharbâtirî, on the border zone). The second 'Abbâsîd caliph, al-Mûnṣîrî, in 147/764-5 sent his son to raid the Şakaliba (al-Yâ’kûbî, Buldân, 237). In that same year, according to al-Baladhurî, 166, the caliph rebuilt the Maṣûlîta (Mopsuestea) and transplanted thither Şakaliba, Persians and Christian Nûbatâns from al-Ḫusûs. Some of these Şakaliba must have been the descendants of those Muslims who had left Bulghar by ship on the "river of the Şakaliba", by which he appears to have designated the Oka (ed. Bombaci et al., viii, 909-10), placed the Şaklab country at the mouth of the Oka (ed. and tr. Dubler, 22/61, 196-9), by which he appears to have designated the Oka (ed. Bombaci et al., viii, 909-10), but without al-Gharnâtî's first-hand knowledge, designates the Don as the naḥr nisâyya.

Our 4th/10th century sources are unanimous in relating an unnamed "ruler (šâhab)" of the Şakaliba, to whom the Georgians mountaineers, the Šanârîya (Ts'âna), appealed (along with similar entreaties to the Byzantine Emperor and Khazar Khağan) for aid against the caliphal forces led by the Türkic general Bûgha the Elder [g. s.]. The Šalvar that took shape in the Balkans were, of course, oriented, in peace and war, towards Constantinople. Although the Muslim sources largely ignore the ferocious Byzantino-Bulghar wars of the 8th-9th centuries, the material deriving from first-hand sources, i.e. travellers, merchants (Jewish and Muslim), Muslims who had spent time in Byzantium and Eastern Europe (e.g. Muslim Abî Muslim al-Djârmî and the sources that came to comprise the "Caspiân Codex", see Zakhoder, Kaspijskij soed) and had direct experience of the region, had substantially increased. As a consequence, the information available to the Muslim world, although not without some confusion (cf. the confusion noted above with regard to the "river of the Şakaliba"), became more expansive and richer in detail. Our 4th/10th century sources are unanimous that the Şakaliba occupied a heavily forested, "vast country" subject to ferocious frosts. The borders of this "country of the Şakaliba", however, are not precisely delineated. According to the Hudûd, tr. 158, to the east lay the Inner Bulghars and some of the Rûs, to the south were some parts of the Gurz Sea (usually the Caspiân but here designating (see 53) the Black Sea) and some parts of Rûm. To the west (actually north-west) and north were the "Uninhabited lands." The Sea of Azov (the Maeotis, Mâwtek in the Hudûd, 54) is noted as the "extreme limit of the Şakla País northward." Al-Kazwînî (Ağha, 614), writing in the 9th century, but largely based on al-Mas'ûdî, places the Şaklb country in the west of the sixth and seventh climes, adjoining the Khazar realm and the mountains of Rûm.

The Slavic primary habitat and migrations

The imprecision of our sources with regard to Şakaliba borders is understandable. These lands, although very important for trade, were distant, dangerous and difficult of access. Moreover, from the 5th-9th centuries the Slavs had been undergoing a series of migrations out of their ancient habitat. Gothic, followed by Hunnic, pressures provided the catalyst for the breakup of Proto-Slavic "unity" and the migrations of elements of the Slavs southwards towards the Danube and across it to the Balkans and westward into Germanic and (earlier) Celtic lands. By 527, the Antes and Sclaveni were raiding the Byzantine Balkan holdings. This pressure increased with the advent of the Avars in the Western Eurasian steppes ca. 558. By the early 7th century, the Slavs were swarming over many parts of the Balkans, penetrating as far as Greece. Slavo-Avar pressure increased during the reign of Heraclius (610-41), who successfully defended Constantinople against a joint Avaro-Slav-Persian land and sea assault in 626. According to Constantine Porphyrogenitus (DAI, 146/147-148/149, 152/153), the Serbs and Croats took possession of the region extending 3,500 farsâqû in length and 700 far- sâqû in width. Al-Khârazmî (105), however, equated the country of the Şakaliba with "Char-mâniî" (the "Germania" of the Latin tradition), i.e. Central Europe. In keeping with this scheme, the country of "Sarmâniyya" (Sarmatia) was identified with the territories of the Burgâнд and al-Lân (Alans). Ibn Khurrâdâdhbih, 92, 155, with Ibn al-Fâkîh, 6-7, 83, following him, divides Europe (Arûj) into "al-Andalus, al-Şakaliba, al-Rûm and Firanja." The Şakaliba are placed north of al-Andalus, alongside of the Burgând and Abar (Avars). In another passage, Ibn Khurrâdâdhbih, 119, notes the Khazar, Alans, Şakaliba and Abar in a listing reflecting the disposition of the larger, politically more important peoples extending from the Volga to Central Europe (Ibn Rusta, 98 has a similar listing).

The location of the Şakaliba lands

By the 3rd-4th/9th-10th centuries, the material deriving from first-hand sources, i.e. travellers, merchants (Jewish and Muslim), Muslims who had spent time in Byzantium and Eastern Europe (e.g. Muslim Abî Muslim al-Djârmî and the sources that came to comprise the "Caspiân Codex", see Zakhoder, Kaspijskij soed) and had direct experience of the region, had substantially increased. As a consequence, the information available to the Muslim world, although not without some confusion (cf. the confusion noted above with regard to the "river of the Şakaliba"), became more expansive and richer in detail. Our 4th/10th century sources are unanimous that the Şakaliba occupied a heavily forested, "vast country" subject to ferocious frosts. The borders of this "country of the Şakaliba", however, are not precisely delineated. According to the Hudûd, tr. 158, to the east lay the Inner Bulghars and some of the Rûs, to the south were some parts of the Gurz Sea (usually the Caspiân but here designating (see 53) the Black Sea) and some parts of Rûm. To the west (actually north-west) and north were the "Uninhabited lands." The Sea of Azov (the Maeotis, Mâwtek in the Hudûd, 54) is noted as the "extreme limit of the Şakla País northward." Al-Kazwînî (Ağha, 614), writing in the 9th century, but largely based on al-Mas'ûdî, places the Şaklb country in the west of the sixth and seventh climes, adjoining the Khazar realm and the mountains of Rûm.

The Slavic primary habitat and migrations

The imprecision of our sources with regard to Şakaliba borders is understandable. These lands, although very important for trade, were distant, dangerous and difficult of access. Moreover, from the 5th-9th centuries the Slavs had been undergoing a series of migrations out of their ancient habitat. Gothic, followed by Hunnic, pressures provided the catalyst for the breakup of Proto-Slavic "unity" and the migrations of elements of the Slavs southwards towards the Danube and across it to the Balkans and westward into Germanic and (earlier) Celtic lands. By 527, the Antes and Sclaveni were raiding the Byzantine Balkan holdings. This pressure increased with the advent of the Avars in the Western Eurasian steppes ca. 558. By the early 7th century, the Slavs were swarming over many parts of the Balkans, penetrating as far as Greece. Slavo-Avar pressure increased during the reign of Heraclius (610-41), who successfully defended Constantinople against a joint Avaro-Slav-Persian land and sea assault in 626. According to Constantine Porphyrogenitus (DAI, 146/147-148/149, 152/153), the Serbs and Croats took possession of the
lands that now bear their names during the reign of Heraclius.

Although our Muslim sources came into direct contact with the Slavs after the great migrations were completed, the various Slavic groupings, extending from the Elbe and Baltic to the Pontic zone and Balkans, were still in the process of defining themselves as political entities. The Islamic authors of the 'Abbasid era were aware of them, collectively, as a distinct ethnolinguistic and cultural grouping consisting of various branches. Some of these subgroupings, in certain of our accounts, were already emerging as more clearly defined polities with their own identifying characteristics. Others, unaccountably, remained a liminal presence. Nonetheless, we have a number of remarkable accounts of the Sakaliba, with an occasional wealth of detail. These accounts are associated with three historico-geographical traditions (to some degree interrelated) that are represented by Ibn Rusta and Gardizi; al-Mas'udi; and Ibrahim b. Ya'qub.

The Sakaliba lands

The Ibn Rusta-Gardizi tradition (Ibn Rusta, 143-5; Gardizi, ed. Barthold, 38-9, tr. Martinez, 162-6, elements of which are also preserved in the Hudud, 158-9, and Marwazi) is largely ethnographic and derives primarily from sources belonging to the 300/900 century. It begins by noting that the Sakaliba lands were only 10 days' travel from those of the Pečenegs [g.e.]. The Sakaliba country was located beyond the steppe in dense forests. According to al-Mas'udi (Murudż, i, 142) "their residences are in the north towards where it joins the west." Ibrahim b. Ya'qub (ed. Kowalski, Relacja, 1, 56), writing in the 960s, however, has them stretching from the Syrian Sea (Bahr al-Shami, i.e. Eastern Mediterranean) to the "Ocean" (the Baltic being meant here). Ibn Fakih, 295, in a reference, perhaps, to an Eastern Slavic grouping located near the north Caucasus, remarks that the Caucasus is connected to the land of the Sakaliba and "in it there is also a tribe of the Sakaliba".

Tribes, political organisation and urban centres

Ibrahim b. Ya'qub (7) describes the Sakaliba, in general, as possessing formidable military might. Indeed, if not for their excessive divisions, "no nation could stand up to them in power."

We have a variety of notices on the titles and leaders of the Sakaliba. Ibn Khurrađadžibb, 17, and al-Biruni, 102, mention that the "king of the Sakaliba" has the title *kazas* (al-Biruni has *kub* = "prince"); a title ultimately of Germanic origin). Al-Mas'udi (Murudż, ii, 142-5) has an important notice on the Sakaliba tribal polities known to him. He remarks that they have kings, are divided along tribal lines ("they [comprise] many tribes and a vast [number] of types") and often war among themselves. He makes reference to a tribe among them "in which the kingdom [al-muk] was of old"; implying the earlier existence of some all-encompassing Slavic political union. Their king was called Māqāk and his tribe is called Walīthaba. The tribes of the Sakaliba followed this tribe in other times past...". He further comments that the Walīthaba were the "purest of lineage, ... the greatest of their tribes and the foremost among them... Then the authority between these tribes was disputed and their (political) organisation (nizām) came to an end. Their tribes formed different groups. Each tribe placed a king over itself...". Ibrahim b. Ya'qub (1-2), who gives the

name/title of this king as Māqāk, largely repeats al-Mas'udi's information, adding that in his day, the "tribes of the north have gained ascendancy over some of them and inhabit" some of their lands (probably a reference to the growing power of the Germanic Holy Roman Emperors in the western Slavic territories).

Elsewhere, al-Mas'udi, Murudż, ii, 144, perhaps referring to the situation in his own day, mentions lādyr as the leading king of the Sakaliba, a ruler possessing many towns, cultivated fields, large armies and to whose territory Muslim merchants were wont to travel for trade. Beyond his lands lay those of the "king of al-Afrāq" (Prague, see below). The identity of this figure is also unknown. Russian and Ukrainian historians (e.g. Hrushevsky, i, 408) suggested that 'lādyr was al-Dīr = the Varangian Dir of the Rus' chronicles, who briefly held Kiev in the mid-9th century. Given the context, this seems unlikely. Lewicki (Swiat, 356) reads this name as *Al'far and proposes him as a ruler of White Croatia. This is not impossible, but it lacks corroborating evidence.

The Ibn Rusta-Gardizi tradition, reflected also in the brief notices in the Hudud, 159, and Mudżmat, 421, reports that their chief, whom all obey, wears a crown. Their chief of chiefs is named *tsayt bīk* and his deputy is called *tašbādi* (*šābāndi*). The first name appears as a reference to a stock of *šābāndi/Svetlopok* (cf. Constantine Porphyrogenitus, DAI, 64/65, 176/177, 180/181, Єфремівська, the king (reg. 870-94) of Moravia before it was overrun by the Hungarians.

The second name/title noted by our sources is viewed as an attempt to render a Slavic *šapanyt* < *župan* (an Old Slavic title of possible Avar or Turkic origin).

Ibrahim b. Ya'qub (1) reports that in his day, the Sakaliba had four kings: an unnamed ruler of the Bulgarians (Balkarín), Bayysldw (*Boyeslav, probably Boleslav I, 935-67, the Bohemian ruler, see Kowalski, Relacja, 60), the "king of Frāgha (Prague), Buyma (*Boym = Bohemia and Krkut' (Kраков, a reference to Boleslav I's control of White Croatia), Mažka, king of the North (a reference to Mieszko I of Poland) and Nakwn (Nakon) in the far west...). Nakon was the ruler of the Obodriti/Obrčně (see Samoškan, 131-40). Ibrahim, who journeyed to this land, has left us a detailed description of these kingdoms. Nakon's realm, in the west, was bordered by the Saxons (Sarah) and the Murmān (Normans, probably Danes; see Kowalski, Relacja, 63); to the east were the Veléti/Vlkí/Ljutići; and in the south were the Lusatian Sorbs/White Serbs (see Salivon, Samoškan, 132). Boyeslav/*Boleslav's realm extended from Prague to Krakow, requiring some three weeks' journey. Prague, our source notes, was constructed of stone and lime. This land, according to Ibrahim, who reaps the prices for wheat, barley and fowl there, was deeply involved in commerce. Sakaliba, Rus, Hungarians, Muslims and Jews came to trade, bringing out slaves, tin and furs. Ibrahim reckons among the remarkable characteristics of the people of Bohemia, given the stereotypical image of the Sakaliba in the Islamic lands, the relative absence of blindness among them. Most, he reports, have dark brown hair.

The land of the king Mažka (Mieszko I) is described by Ibrahim 4-5) as the most extensive of the Sakaliba domains, with fertile soil and an abundance of foodstuffs, meat and honey. The king supported his
army of 3,000 armoured men, 100 of whom are equal to 1,000 of others, from the taxes levied on the markets. The king also provided for the children, male and female, of his army, including dowry and bride-price payments. Magh'a's neighbours are the Rûs in the east and the Baltic Pruss (Brus) in the north. Our source then passes on to an account of the (now) Slavicised Bulgarians (Bul'kârín), whose land he did not personally visit, but whose emissaries he met in Magdeburg (Mddhtburgh) at the court of Otto I. He reports that they had more than a rudimentary governmental apparatus and had men who were familiar with foreign languages.

Of the other tribes and their rulers, almost all of whom are to be found in the Central European Slavic lands, al-Mas'ûdq (Muradî, ii, 142-3) first mentions the *Utšutâra. This name is also cited by Ibrahim b. Ya'kûb, 9, 120 ff.) who has the corrupted form Šhrâba (var. lect. šhrâna, šhrâna, šhrâ, şhrâvâna). These are the Stodome of Brandenburg, the Heveldi of the German chroniclers (see Marquart, Streifzüge, 104). The king of these Utšutâra is recorded as Bashkâbîj. Next are the Dalâbâ whose king “at the present time is called Wândâ sâkî.” These are the Dudlebi/Dulelbî, an Eastern Slavic tribal grouping, much oppressed, according to Slavic historical tradition, by the Avars (PSRL, i, 11-12) whose territory extended into Western and Southern Slavic regions. The name of their ruler “King Tange” is the Germanized Conrad of Franconia (d. 919). Clearly, the use of the Slavic *Nemćin probably points to a Slavic source for this ethnonym in the Muslim world (cf. also the Khazar Hebrew Correspondence; Ottoman Turkish *v. q.v. Nemć “German, Austrian” is most probably a later, independent borrowing). Next to them is the unidentified tribe called Mušbîn (included in Ibrahim b. Ya'kûb, 9, 120 ff.). This grouping is followed by the Serbs, of whom al-Mas'ûdìq remarks that they are “awe-inspiring” (muhib). Marquart, Streifzüge, 106-9, who conjectures that al-Mas'ûdìq's notice stemmed from the first third of the 9th century, identified them with the Lusatian Sorbs, the “White” or “unbaptised” Serbs noted by Constantine Porphyrogenitus (DJI, 152/153), some of whose inhabitants, according to the Hudud, “resemble the Rûs.” It has long been suggested that Wândû rendered *Wândût, the name of an Eastern Slavic tribe, the Vândi.

Beyond the domain of *Idrî (see above), the foremost king of the Sakaliba, according to al-Mas'ûdìq, Muradî, ii, 144, is the king of the Alfragh (Prague) who has “mines of gold, cities, vast, cultivated fields, many armies and great numbers (of people).” He conducts wars with the surrounding states of Rûm, the Franks (al-Fîrândî) and the Langobards (îbekdî, recte ìnkûbêrdî for ìnkûbêrdî) with “alternating success (sîdêjî).” Beyond him is the “king of the Turcs” (Hungarians), whose people are “the most handsome in appearance of the Sakaliba, the greatest in numbers” and who are known to be related to the Turks. Their language resembles that of the Arabs (turban, shirt and waistcoat). They practise agriculture and viniculture due to the abundance of water which is not channelled into ditches or canals, but follows its own course over the ground. They consist of two distinct communities (regrettably not further defined). Most of their trade is with the West (ms. *fî for *fârâ, thus Barthold, 59, translates this as “they carry on their trade predominantly with the Arabs”). There is a rather confusing version of this notice in the Hudud, 160, in its section on the “Afîrûdî.” Here, their eastern neighbours are given as some of the Khazarian Pechenegs and portions of an unnamed mountain range. To their south are other Khazarian Pechenegs and the Gurz Sea (the Black Sea). In the west are some parts of the Gurz sea (!?) and the Inner Bulgârs. To the north are some Bulgârs and the Wândû mountains. The Hudud further comments that they are Christians who speak Arabic (Târî and Rûmî. Their dress is like that of the Arabs and they live in tents and felt huts. All of these details, in particular their linguistic affiliations, seem highly improbable (see Minorsky’s comments, 442). They are portrayed, in the Hudud, as being “on friendly terms with the Turks” (the Hungarians, who conquered them and destroyed their state in the late 9th century) and the Byzantines. This would appear to date this notice to the mid-9th century. Their neighbours, in al-Mas'ûdìq’s narrative, are the Khârûwâin (the White Croats are meant here, see above), the Sâsin (perhaps to be emended, as Marquart, Streifzüge, 122, suggests, to *Sâshîn “Čekhs”) and the unidentified Hûbâbîn, Khâshânîn in Ibrahim b. Ya’kûb. Marquart, Streifzüge, 140-1, would see in them the Guduscani (*Dschuchânîn), a Slavic tribe noted together with the Obokriti and Obôkriti (the modern Czechs) and the Vênûs or Venûs (Wenceslas), whom Marquart, Streifzüge, 103, identifies with Wenceslas I of Bohemia (920-9), for which there is no evidence other than a similarity of names. Our sources place them alongside the Nâmûgân (<Slav. nemêc, nemets “German”, see above), whose king is called Gârándî and who are described as “the bravest of the tribes of the Sakaliba and the most chieftains.” This grouping is followed by the Serbs of whom Marquart, Streifzüge remarks, that they are “awe-inspiring” (muhib). Marquart, Streifzüge, 106-9, who conjectures that al-Mas'ûdìq’s notice stemmed from the first third of the 9th century, identified them with the Lusatian Sorbs, the “White” or “unbaptised” Serbs noted by Constantine Porphyrogenitus (DJI, 152/153), some of whose inhabitants, according to the Hudud, “resemble the Rûs.” It has long been suggested that Wândû rendered *Wândût, the name of an Eastern Slavic tribe, the Vândi.

Although some elements of the accounts of the Muslim historians and geographers touch on the Eastern Slavic groupings, most of our information on the latter is inextricably tied to the Rûs theme [see rûs]. Abû Hâmîd (ed. Dubler, 25-6/64, tr. Bol’shakov, 37), however, makes no distinction, for in his day, the Rûs, whatever their origins, were fully Slavicised. He reports that he went to a city of the Sakaliba called Qâhîr Karmân (Dubler: Qâhîr Kûmnân, cf. also Bol’shakov, who attempts to interpret “Kuyav” = Kiev from this form). “In it are thousands of Maghribians, with the appearance of Turks. They speak Turkic and shoot arrows like the Turks. They are known in this country as the Bâdina” (= Pecheneg). In this connection we might recall that Rashîd al-Dîn (ed. Karîmi, i, 482) refers to Kiev by its Turkic name Men Kermen. Kermen is a Kıpâk Turkic word meaning “fort, city.” It was borrowed into 14th century Russian as well. Rashîd al-Dîn fur-
Ibn Rusta, 127, is aware, however, that Christianity had already been adopted by Balkan Slavs during the reign of the Byzantine emperor Basil I (867-87). In reality, a "unity had already begun to make headway among the Balkan Slavic peoples before the era of Basil I. Events came to a head in the latter years of the reign of Basil's predecessor, Michael III (842-67). In the course of an extraordinary concatenation of diplomatic and military initiatives undertaken by the Franks, Great Moravia, the Balkan (Turkic) Bulgarian realm and Byzantium, the Bulghar ruler, Boris, converted to Christianity in 864 on the Cyrillic-Methodian mission, which forms the backdrop to these events, see F. Dvornik, Byzantine missions among the Slavs, and Vlasto, The entry of the Slavs, 155 ff.). The Slavic subjects of the Bulghars were already moving towards Christianity. The conversion, at first resisted by some elements of the Turkic Bulghar aristocracy, ultimately contributed to their complete Slavicisation. The Slavs to which Ibn Rusta referred are generally believed to be elements of the southern Serbian tribes converted in 877 (Marquart, Strefzage, 239-42). Vlasto, 208, has concluded that the bulk of the Serbs were Christian from about 870. Fine, The early medieval Balkans, 139-40, however, views them as still essentially pagan at this time. The comment by Ibn al-Fakih, 77, that the "Sakaliba have crosses," is, in all likelihood, a reference to the Balkan Slavs (Lewicki, Zdania abkhakii, i, ii, 56). Similarly, the report in Hudid, 157, regarding the "Christianscic Sakaliba" in a "province of Rum" who pay taxes to the emperor points further to the South Slav area. Al-Mas'udi, Tanbih, 181-2, perhaps alluding to the struggle between Rome and Constantinople in the 9th century for the confessional loyalty of the newly-emerging Slavic Christian communities, notes that "the majority of the Sakaliba, the Bulghars and other nations which are devoted to Christianity obey the ruler of Rumiyya." This must refer to the Byzantine emperor rather than the Pope of Rome.

Furs among the Sakaliba

According to Abū Hāmīd (ed. Dubler, 22-36/1-2, tr. Bol'shakov, 35), the "River of the Sakaliba" has in it an animal with a black pelt that looks like a small wolf. It is called a "water sable" and its hides are exported to Bulghar and Sakhsin [see SAKSIN]. They conduct their business affairs using fur-less, old squirrels pelts (as currency). If the head and claws are intact, 17 of these are worth one silver dirham. They tie them up in a bundle and call it a djukn. Furs, as we know from indigenous sources, served as currency in Rus', indeed a small unit of currency was the kuna (cf. Mod. Russ. kunitsa "marten"). Dubler (348) saw djukn as a possible garbling of kuna. Bol'shakov (73-4) preferred a reconstruction of the Arabic form as *djyn for Old Russian groma, a unit of currency larger than the kuna. Abū Hāmīd then goes on to describe the use of these furs, with the ruler's seal on them, as currency.

Religion

In his account of Khazar, al-Mas'udi, Murādī, i, 213-14, portrays the Sakaliba and Rūs as the principal pagans of the country. In contrast to the Muslims, Christians and Jews, who each have two judges for their respective communities, the pagans were accorded only one who renders judgment according to pagan practice (bi-hukm al-adhiliyya), the judgment of reason. The tradition represented by Ibn Rusta, 144, Gardizi, tr. Martinez, 164, ed. Barthold, 38, and the Hudid, 158, states that they are all fire-worshippers. Clearly, this notice stems from material that had been gathered before elements of the Slavs were converted to Christianity in the mid-late 9th century. Worship of the hearth fire and of the sun among the pagan Slavs, bespeaking strong ancient Iranian influences, is well-established in the scholarly literature.

There are some anachronistic references to the Sakaliba in the later Muslim sources, which repeat information stemming from the 9th-10th centuries. Most of these, however, no longer deal with them as a specific ethnic-linguistic unit, but rather as distinct countries, cf. al-Idrīsi's extensive treatment of "Bu'āmīyya" (Bohemia), "Buluniyya" (Poland) and "Rūsiyya (see Lewicki, Polska). Thus al-Dimashki (261-2) largely cites the information of al-Mas'udī, al-Bakri (who preserved ībrāhīm b. 'yā'kūb's account for us), al-Idrīsi and the historian Ibn al-Athir (tale of the Rūs conversion). An interesting mix of old and
more recent data is found in Abu 'l-Fida's Takwim al-buldun. For example, he reports the more...

ried the coasts of southern Italy as far as Salerno and Naples. The geographer and traveller Ibn Hawkal (378/988) noted that the most populous quarter in Palermo was the ħanūn al-Ṣaklabī (ed. Kramers, 119, tr. Kramers and Wiet, 118). But it was under the caliph al-Ḳā'im (322-34/934-46 [q.v.]) that the Slav element in the Fāṭimid forces really increased, especially after the revolt of Abū Yazīd [q.v.] and his Berber Khāridjiye supporters showed the need for reliable professional troops. Hence several Ṣaklabī commanders, with typical slave names like Maysūr, Mārām and Būgrāh, began to be mentioned in the Sources of Egypt, such as Amari and his reviser Nallino, interpreted the consonant ductus of the sources as al-Sikilli ‘the Sicilian’, but I. Hrbek has pointed out that it is unlikely that native Sicilians (for whom the plural form is normally al-Sikilliyyun), enjoying protected dhimmī status, would be enslaved.

The real origin of these Ṣaklabī muṣlisma must have been the Slav peoples of Central Europe and the Balkans, then in considerable turmoil from the warfare of the Byzantines and local Croat, Serb and Bulgār rulers and from expansionist pressures against the Slavs from the Germanic Ostmark. Prague was a centre of the slave trade, and St. Adalbert relinquished the bishopric of Prague in A.D. 987 because he could not ransom all the Christian slaves which Jewish merchants brought thither. Captives of war were shipped as slaves, almost certainly by the Venetians, through the ports of Dalmatia [q.v. in Suppl.], with the Muslim potestas as their purchasers, and, despite Papal and Imperial anathemas, this traffic continued well into the 5th/11th century; in 1076 Pope Gregory VII made King Zvominir swear as part of his coronation oath not to allow the slave trade in Croatia and Dalmatia.

Within the Fāṭimid caliphate, the Slavs continued to play a conspicuous role in the reign of al-Muṣṭāfī (341-65/953-75 [q.v.]), and al-Makrīzī states that the caliph learnt the languages of his servants and retainers, sc. Berber, Rūmīyīya (according to Hrbek, probably the Sicilian dialect of Italian), Sudānīyya and Ṣaklabīyya. Two of his prominent commanders, the eunuch Ǧāyṣar and Muẓaffar, were Slavs, but the most celebrated of all was the conqueror of Egypt for the caliph, Djiwarḏāl [q.v.], whose ambiguous nisba is probably to be interpreted as al-Ṣaklabī, as is possibly that of the eunuch commander Djiwarḏāl [q.v.]. Djiwarḏāl’s career, together with those of his son al-Ḥasan and, probably, of the eunuch Bardjiwaḥ [q.v.], in the reign of al-Ḥākim (386-411/996-1021 [q.v.]), mark the apogee of Slav influence in the Fāṭimid state. During the course of the 5th/11th century, Slavs became less prominent in the army as the share of the Turks increased and as conditions in the Balkans became more peaceful, with the formation of stronger nation states there. They nevertheless continued to be thefavoured bearers of the ceremonial parasol or mizalla [q.v.] (this office coming fourth in the administrative-military hierarchy after the vizier, the head chamberlain or ǧāḥiṯ al-bāḥ, and the commander-in-chief or isfahālān), and they left a mark on the language of government, according to al-Makrīzī, Khīṭāt, Cairo 1324/1906, iii, 68, in the shape of the darb al-Ṣaklabī in the Zuwayla quarter of the city.

3. In the Muslim West.

As noted in section 1 above, the Arabic geographers of the 3rd-4th/9th-10th centuries gave the name Ṣaklabī to the peoples of the centre and north-east of Europe occupying territories which stretched from north of the Byzantine empire to the lands of the Khazars and Bulgārs in the east to those of the Franks and Lombards in the west, corresponding, it appears, to the lands of the Slavs in the east, the Franks and Lombards in the west.

Since Umayyad times, slaves of such origin in the Islamic world had reached appreciable numbers, used as domestic slaves and as soldiers, in particular in caliphal service (see above, section 2). It seems that in the west, these Ṣaklabī came mainly from the commerce which had developed in the 8th and 9th centuries between the Dār al-Īslām and the lands of the Carolingian West. Western sources, and to a small extent, Arabic ones, attest the fact that these slaves, the product of war and, probably also, of raids mounted from Christian Germany into the Slav lands, were forwarded to Spain, and probably also the Maghrib, by merchants from marginal ethnocultural groups acting as intermediaries between the Christian and Islamic worlds: ‘Greeks’ of Italy (Neapolitans, Amalfitans and, very likely also, Venetians), and above all, the Jews of Spain and Sephardim.

It appears also that, very soon, the Ṣaklabī sold in Spain had previously, on reaching Muslim territory, undergone castration, evidently to increase their value on a market where the demand for eunuchs was strong, given the need for male staff for the running of harems. These facts doubtless explain why the term Ṣaklabī soon acquired the specialised meaning of ‘a white eunuch’, in opposition to the ashb, black slaves. In the 4th/10th century, this trade was very important and seems to have been the main cause for the rise of the great port of Almeria, from which these slaves were re-exported to other Muslim lands of the Mediterranean basin. Thus the castration was done in al-Andalus, in connection with an important Jewish group attested in the town of Lucena. Those Ṣaklabī brought to Khvārazm or Khvārāsān from the eastern part of the Slav world do not appear to have been the subject of the same treatment, but little is known about this question apart from what is mentioned exiguously in the geographers.

In an important article, David Ayalon has considered afresh the question of the true origin of these Ṣaklabī, which most authors, following Dozy, considered as stemming from wars and raids of the Muslims of al-Andalus against the southern fringes of the Christian West (northern Spain, southern France, the coasts and islands of the Tyrrhenian Sea) rather than from the actual Slav lands. According to Ayalon, the text of Ibn Hawkal adduced by Dozy, Lévy-Provençal, Ashton, etc., has been wrongly interpreted. He holds that the Arabic geographers of the 3rd-4th/9th-10th centuries made a clear distinction between the Galicians, Franks and Lombards on one hand, and the Ṣaklabī or Slavs on the other. Hence it could be that, according to Ayalon, the Slavs were supposed to come from the Carolingian empire and not from the Slav lands, the military importance of slaves of Christian origin in the mediaeval Islamic world has been exaggerated. Ayalon’s thesis is that, in the main centres of Muslim power, and even in al-Andalus, for long, pagan soldiers with white skins from the Dār al-Ḥarb were preferred to Christians from Europe, who appear in this role relatively late.
This reconsideration, and the interpretation of Ibn Hawkal’s text, should be approached with prudence. Aydan argues that the Western documentation, in Arabic and Latin, which should be carefully re-examined before reaching the conclusion which he proposes. In principle, and from the ethnogeographical viewpoint, Ibn Hawkal may not be confusing the Šaklabl with the Franks and other peoples of the West. But in the same passage he says that the people of al-Andalus “attack the Slav lands in the directions of Galicia, the Frankish lands, Lombardy and Cremona, and will take prisoners there”, which is hardly comprehensible unless one admits that the human product of Saracen piracy on the Western European coasts was considered as belonging to the general group of Šaklabl. This point might be verifiable in certain particular cases, such as that of the “Slav” ruler of the Dénia Šā’īf in the 5th/11th century, Mudjāhid, whose origin was, there is reason to think, Italian.

In the East, some Šaklabl—it is difficult to know whether these were eunuchs or not—were used as soldiers by the Umayyads of Damascus, perhaps in imitation of the Byzantines, who had corps of Slav troops. The Šābbāsidis favoured the use of Turks, and the Slavs played only a minimal role in Baghdaḍ. But in al-Andalus, the Cordovan Umayyads seem to have prolonged, in this sphere as in others, the Damascus tradition. Servants of Šaklabl origin are attested in the 3rd/9th century under the amirāte, but it was under the caliphate that their increase in numbers became spectacular. At the end of ʿAbd al-Rahmān III’s reign (350/961), there are said to have been almost 14,000 Šaklabl at Cordova.

These persons, who had come as children into the service of the state, received a good “technical” and intellectual education, and were used as domestic attendants, court officials, soldiers and administrators, reaching the highest levels in all these spheres. Already under the amir ʿAbd Allāh, at the end of the 9th and opening of the 10th centuries, the most influential of the viziers was Badr al-Šaklabl. Under al-Ḥakam II, the influence of high Šaklabl officers rose still further. At his death in 365/976, two of them, Fāʾik al-Nizāmī and Dhwahdar, director of the ṣināʿa and court jewelry manufacture, were thus respectively, but also commanders of the Šaklabl guard, who had both enjoyed the trust of the dead ruler, wished to set aside his son and official heir, Hishām, who had both enjoyed the trust of the dead ruler, wished to set aside his son and official heir, Hishām, who was not yet twelve years old, and enthrone in his place al-Muqṭira, one of al-Ḥakam II’s brothers. But their plans were frustrated by the ministers al-Muḥāfiz and Ibn Abī Ṭāmir, the future al-Mansūr, the first of Berber and the second of Arab origin, who took advantage of the disquiet amongst ruling circles concerning the increased power of the Šaklabl.

In Hishām’s reign, power was speedily appropriated by al-Mansūr, who in his turn relied on numerous Šaklabl elements faithful to him, as did likewise his two sons after him. During the crisis which followed the “Cordovan revolution” of 399/1009 and the fall of the “Amirids, and until the death of the caliphate in 422/1031, several chiefs from the Šāmirid Šaklabl played a major role in the politico-military manoeuvrings which accompanied the breakdown of the Umayyad central administration.

The main ones here were Wāḏīḥ, commander of the Medinanacel march, and head of the “Šaklabl—Andalusian” party which, with the caliph al-Madīḥ, disputed control of Cordova with the Berbers of the caliphal army and their concurrent caliph al-Muṣṭafīn until his death in 402/1012. Two other chiefs, Ḳhayrān and Mudjāhid, then played a comparable role, but based respectively on Almeria and Dénia, where they had built up practically autonomous powers which were transformed into ṣan’āʾs once the central government disappeared completely.

Two other “Slav” Šāʾīf took shape at the same time on the eastern coast of al-Andalus, those of Tortosa and Valencia, without one knowing properly how the Šaklabl elements managed to achieve the upper hand in this region. The most brilliant of these rulers was incontrovertibly Mudjāhid of Dénia (403- 506/1012-465), famed for his ambitious, but unfortunately, enterprise against Sardiniā [see SARDANIĀ] and, above all, by his maecenates which made Dénia for a while one of the cultural capitals of the Mediterranean West, especially in regard to lexicography and the Kur’ān readings. It was at his court or that of his son ʿAlī (436-68/1045-75) that the Ṣiḍdāla of Ibbn Garcia [see IBBN GHAṢIRYA] was written, the only important Andalusian work belonging to the anti-Arab—although perfectly Arabised culturally—movement of the Šuʿūbiyya [q.v.]. The Slav Šāʾīf of Dénia is the one which lasted longest, the others having disappeared towards the middle of the 5th/11th century (the supply of Slavs hardly continued, it would appear, after the end of the caliphate).

The Šaklabl phenomenon in al-Andalus must be considered in company with the acquisition of power by Turkish elements in the ʿAbidānī caliphate or by other military elements of servile origin in various parts of the Muslim world during the history of mamāluḳ, in Egypt and blacks in 11th/17th-century Morocco. In the though-provoking works on this problem of Patricia Crone and Daniel Pipes, neither have fully taken into account the Šaklabl of Spain and, more generally, of the Muslim West, although these would have merited consideration. Elements of this origin played a role, probably less important and under the political control of the régimes they served, in Ifrikiya from the Aghlabid period to the Zirīd one, above all in the Fāṭimid caliphate there and then in Cairo (see above, section 2). Al-Bakri mentions contingents of Šaklabl in the little state of Nakṭūr [q.v.] in the 4th/10th century, but it is true that this principality lived in the shadow of al-Andalus. A quarter of Palermo is mentioned by Ibn Hawkal as the abaḥr al-Šaklabl, and during the Arabo-Norman period, the kings of Sicily had in their service Muslim eunuchs who can probably be considered as Šaklabl.

**Bibliography:**
SAKARYA (Ottoman orthography Sakarya or Sa'karya, modern Turkish Sakarya), a river in Turkey. It rises near Bayat in the northeast of Afyun in modern Turkey, with its chef-lieu at Adapazarı. In its eastward course it enters the district of Izmid, near Bursa. After Lefke it turns sharply to the north, entering the district of Izmid mark the track of its ancient course. In classical times Pentegephyra or Pontogephyra; see classical times. It has changed its course since the Byzantine period. The caliphate of the Fatimids had settled in a quarter of the old Fatimid district of Kairouan near Mekedje, having now run 400 km/250 miles. The stretch of its course in the former Kairouan had run in a north-easterly direction through the valleys of Kastamuni on the right bank and of the Carkh Su from Ankara and near this confluence the river took its course to the east. Sakarya receives on its right bank the Kirmir Su, and the Enguru Suyu from Ankara and near this confluence. From the level of which is above that of the river and the gulf in order to bring more easily to his capital the wood required for the building of his fleet. Being convinced of the feasibility of the project by the report of experts, he gave orders for its execution, but the opponents of the scheme were able to frustrate it by the argument of the ridge of the Sakarya. In August 1922, the Turkish army was victorious for a second time near the Sakarya; this was the beginning of the Turkish offensive which ended in the complete reconquest of Anatolia and the hurling of the Greek armies into the sea at Izmir (see S.J. and E.K. Shaw, History of the Ottoman empire and modern Turkey, Cambridge 1976-7, ii, 360-3).

Sakarya is now the name of an il or province of modern Turkey, with its chef-lieu at Adapazarı [see ADA Pazarı].

dedicated his career to augmenting his mentor's accomplishments. But in fact, al-Sakhawi's aptitudes inclined him toward the production of works remarkable more for their encyclopedic scope than for their originality of method. Al-Sakhawi's most noteworthy achievement was his massive biographical dictionary of 9th/15th-century notables, al-Daw' al-lāmīs fi 'tāyān al-karn al-sā'īn (ed. Husam al-Din al-Kudsi, 12 vols., Cairo 1353-5/1934-6). While the range and diversity of individuals included (the final volume exclusively on women) render the Daw' one of the foremost primary sources for the Islamic lands in pre-modern times, the organisation of data in its myriad entries highlights those qualities most esteemed by the scholastic elite when they evaluated their own peers.

Al-Sakhawi held several appointments as Shaykh al-Hadith in distinguished religio-academic institutions of Cairo. He also travelled to the Syrian districts of the Mamluk empire, witnessing recitations of Hadith by candidates for ijāza certificates and debating controversial texts with colleagues on numerous occasions in the provincial capitals. Al-Sakhawi made his first pilgrimage in 870/July-August 1466 and returned to the Hidjaz on the Hadj 193 times again, spending subsequent years in scholarly residence there. He relished his sojourns in the holy cities as a signal opportunity in his encyclopaedic approach and to his keen appreciation of the central Islamic lands in pre-modern times, the organisation of data in its myriad entries highlights those qualities most esteemed by the scholastic elite when they evaluated their own peers.

Although justifiably respected as a prominent figure of late mediaeval scholasticism, al-Sakhawi disguised a propensity for personal vindictiveness against his adversaries and those of his associates under the guise of a pious wish to evaluate his contemporaries' moral probity in order to assess the validity of their opinions, both for interpretation of the Sharī'a and the giving of historical details. While often captivating, al-Sakhawi's caustic opinions of his colleagues and derogatory remarks about their shortcomings must be weighed with caution. By contrast, his factual information is reliable due to its centrality in his encyclopaedic approach and his keen awareness that opponents would expose any errors or distortions he committed in return for his denunciation of them and their works.

In his final years, al-Sakhawi returned to the Hidjaz where he devoted his remaining energies to the completion or refinement of several texts and the training of students in Hadith transmissions. He died in Medina.

SAKHARI, BANU, an Arab tribe in what is now Jordan.

The Mamluk encyclopaedists Ibn Fadl Allah al-Umari (d. 713/1314) and al-Sakhawani (d. 821/1418) wrote in their al-Daw', that the Banu Sakhri were living in the eastern plateau of the Mamluk province of al-Karak, but the tribe comprised the following six clans: al-Da'awāy, Banu Sakhjā, al-Dabiyān, al-'Atiyiyān, Banū Wahran, and Banū Hūbīr. The Ottoman state levied 'ādāb from them and the tribe of Karīm, which amounted to 38,000 akce. Records from the 17th and 18th centuries provide no more information, while 19th-century and early 20th-century sources report on the tribe in detail, especially in the accounts of European travellers such as Musil. The clan names of the earliest records do not match those in the later ones. In modern-day oral tradition, the Banū Sakhri are in origin an autochthonous tribe that originated in southern Jordan from the Hidjaz in the early 19th century. They first settled in southern Jordan and then moved north; thus they claim that their territory extended from the Hawrān in the north to the south of modern Jordan. Part of the tribe settled in the northern villages of the sandak of 'Ajlūn while others, the Sukhur al-Ghūr (the Jordan Valley Sukhur), settled in the fertile northern regions of the Jordan Valley.

The Banū Sakhri tribe played a significant role in the Transjordanian steppe (būdaya) because the Pilgrimage route between Damascus and the Hidjaz passed through their territory. The Ottoman state paid them a subsidy or al-sūra annually, but during periods of Ottoman weakness, or when they suspended payment of the annual allocations, the tribesmen would violate their commitments and loot the Pilgrimage caravan as it passed through their territory. One of many such cases was in 1753, when Shaykh Ka'dān al-Fayzī looted the caravan, amongst whose members was the sister of the Ottoman sultan.

The tribe also levied their own taxes as khasa from the neighbouring villages, particularly those in the sandak of 'Ajlūn. More often they simply raided the villagers' fields. Arabic press accounts provide plenty of information on looting and attacks against the villages of the sandak of 'Ajlūn, particularly Ramla.
in the late 19th and early 20th centuries. They also rented out their camels as transport animals for the pilgrimage caravans, merchants and travellers. With the construction of the Hijaz Railway [q.v.] in 1906, their role diminished and they shifted away from camel herding to raising sheep and goats.

After the Ottoman Tanzimat reforms, the Banū Sākhr began to settle near abandoned sites with wells or reservoirs constructed by the Romans and later maintained and repaired by the Mamluks and Ottomans. To encourage this process, the Ottomans treated the Banū Sākhr as an important tribal body with dignity and gave them honorary titles. This put the ṣākī in a privileged position to register the lands within their territory under their own names.

The relations between the Banū Sākhr and the other tribes, such as the Huwaytāt, the Banū Ātīyya, and the Sārdiyā, were almost hostile and they often raided each other. But these tribes, especially the Banū Sākhr and Sārdiyā, formed an alliance, fostered by intermarriage, known as Ḍurūsh ('Arab al-Ṣamālī, "Bedouin of the North") to face the invading Ḍanāza tribe and its clients. As in other tribes, there were continuous struggles for leadership among the prominent members of the tribe. This was very evident in the paramount house of al-Fāyūz.

With the establishment of the modern state of Jordan, law and order gradually prevailed. The late King al-Husayn, among them has almost come to an end. Of this tribe is opting for agriculture and business and are now almost totally integrated into the fabric of the state. With the spread of education, a growing portion of their tribal shaykhs gave them honorific titles. This put the ṣākī, chief butler or sommelier (ṣākī, ṣākī, sahib al-shardb), in a position to determine policy and took steps to assimilate as many members of this tribe and other tribes as possible into the armed forces, especially in the Desert Patrol Forces. The Banū Sākhr now have their own elective constituency and since the establishment of the first legislative house in Jordan in 1928 they have had their own representation. They are now almost totally integrated into the fabric of the state. With the spread of education, a growing portion of this tribe is opting for agriculture and business and deserting their old way of life, so that nomadism among them has almost come to an end.

SÄKI

Dīwān, Baghdād 1981, i, 341, 404, 409, ii, 134, 205-6, 244-5, 290, 474, 582-3, 591-2, 712, 716-17, 732; idem, ... which hints at other ceremonial aspects of winedrinking (E. Herzfeld, Die Malereien von Samarra, Berlin 1927, 9-13, ed. A. Suhayl Khɔdkis, mdhruydn Paris 1964, i, 80, ii, 95). Nizam al-Mulk (Siydsat-2 vols., as the 3rd/9th century in the poetry of Abu Shakur of Ghazna, the sdki were as close to the ruler as were servants in a tavern or as participants in drinking parties in which distinctions between the server and the served are often moot. During the 2nd/8th to 6th/12th centuries rulers and princely figures, although often portrayed cup in hand, are only rarely shown in the company of a sdki; the rulers' rigid frontal posture gives such images a formulaic quality (Mirjam Gelfer-Jorgenson, The Islamic paintings in Cefalà Cathedral, Sicil, ly, in Hafnia [1978], 131-41).

Despite their rarity, early Islamic depictions of the sdki have historical importance. Both Sasanid court protocol and themes drawn from Dionysiac imagery are reflected in early Islamic representations. The scene of wine-drinking depicted on a silver platter, attributed to 2nd/6th-century Persia, and now in the Hermitage Museum, St. Petersburg, shows various facets of the sdki's role. The focal point of its composition is a princely figure, surrounded by attendants, reclining on a couch while holding a wine bowl in one hand and a flower stalk in the other hand. The foreground is occupied by a much smaller figure who appears to be a sdki. He stands with crossed hands resting on his chest and his mouth is covered by a protective mask similar to that worn by Zoroastrian priests, probably to avoid polluting the cup with his breath or saliva, a custom mentioned by the pre-Islamic poet al-Aššā (see above, section 1; J.K. Choksy, Purify and pollution in Zoroastrianism, Austin 1989, 84-6, fig. 12). The tools of his trade appear to the right—a ewer and a tripod supporting a sieve through which wine is being filtered into a two-handled jug. Judging by his small size, this sdki was a relatively humble servant. A larger attendant stands behind the reclining drinker while two seated minions face the latter (V.G. Lukonin, Izkusto drenego Irana, Moscow 1977, 169).

A fragmentary wall painting discovered in the ruins of an ʿAbbāsīd palace at Sāmarrā [q. e.] depicts two sākỳas, with a flask in one hand and a bowl in the other. Each pours wine into the other's bowl, which hints at other ceremonial aspects of wine-drinking (E. Herzfeld, Die Malereien von Sāmarrā, Berlin 1927, 9-13, 885...
Both sākīs and sākiya appear in depictions of Islamic princes or rulers in various media. Four female attendants, including two musicians and a sākīya, are shown in attendance around the seated ruler who is depicted on a silver platter, which has been attributed to early 3rd/9th-century Marw, now in the Hermitage Museum. The sākiya standing to the ruler’s left holds a ewer in one hand and a piece of fruit in the other (B. Marschak, Silberschätze des Orients, Leipzig 1986, 76-7, figs. 30, 32). More commonly shown, however, are sākīs. One is depicted in a vignette from the ceiling of the Capella Palatina in Palermo, built in 1144, where he holds both a cup and a flask (R. Ettinghausen, Arab painting, Geneva 1962, 44-5). The Hermitage owns a silver vessel, attributed to Khurāsān ca. 90/1000, which depicts a seated prince flanked by two youths in Turkish attire; one holds a flower, the other a ewer and cup (Marschak, op. cit., 77-8, fig. 33).

Literary references suggest that by the 4th/10th century a Turkish youth was considered the ideal sākī. When the vizier al-Muhallabi was offered a drink of water at the palace of the caliph al-Mu’tāf (334/639-467/74 [q. e.]), he was allowed to keep not only the service, a golden tray and a crystal jug covered with a piece of silk-brocade, but also the server, “a Turkish ghuldm [with an unblemished visage and beautiful clothes] (Hilāl al-Sābī, Ruyūn dār al-ghulīda, ed. M. ‘Awwād, Baghdir 1380/1961, 94-5). The mechanical sākī depicted by al-Djazarī in his book on mechanical devices is characterised as a ‘ten-year old slave’ who wears a short tunic and cap. He holds a glass cup in his right hand and a fish in his left. At prescribed intervals wine flows through the fish into the glass. The glass can be removed and the wine drunk. After the glass is returned to the sākī’s hand the process is repeated. A youthful sākī holding a ewer and cup also stands by the ruler’s side in a mechanical, boat filled with drinking figures which can be floated on a basin during festivities (The Book of knowledge of ingenious mechanical devices, tr. D.R. Hill, Dordrecht 1974, 107, 118, pls. XIV, XVII).

During the rule of slave dynasties such as the Atabegs in Syria or the Mamlūk basin inlaid by Muhammad ibn al-Zayn now in the Louvre and often referred to as the ‘Boat of St. Louis’ (Estelle Whelan, Renaissance of Islam: art of the Mamluks, Washington, D.C. 1981, 21-2). Among the Mamlūks, in particular, the sākī’s goblet was transformed from a token of servitude to an indicator that its bearer belonged to a privileged élite. Schematic drawings of a footed goblet appear on objects or structures belonging to sākīs or former sākīs. It was used as such by Sultan Kibīb both before and after his accession to the throne (Whelan, op. cit., 230, 234; L.A. Mayer, Saracenic heraldry, Ox. 1933, 5, 10-11 and passim).

The world of the sākī was not restricted to the courts of rulers or their amirs, for they were also employed in public taverns. The range of tasks they performed there is vividly illustrated in a painting from a manuscript of al-Harîrî’s Makhâdi ma ated to 634/1237. It shows the entire cycle of wine production and consumption in a two-storey tavern. On the lower level, grape juice flows out of a basin in which a youth tramples grapes, and another youth strains the juice through a cloth-covered vessel supported on a tripod. Two youths pass a wine jug from the first to second floor. Nearby, two men seated at a table drink wine from cups (Paris, B.N., ms. ar. 5847 fol. 33a; D. and Janine Sourdel, La civilisation de l’Islam classique, Paris 1968, 432, fig. 169). This condemned depiction may suggest that the beverage being consumed was only slightly fermented (J. Sadan, Vin – fait de civilisation, in Studies in memory of Gaston Wet, ed. Miriam Rosen-Ayalon, Jerusalem 1977, 132-3).

The most significant transformations of the sākī’s visual role, however, occurred in post-Mongol Persia. The Mongols and their successors, particularly the Timūrids, were dynasties whose appetite for alcoholic beverages often reached epic proportions, and painters frequently depict both the serving and drinking of intoxicants in court settings. Under the Mongols, a form of official court portraiture existed in which a ruler and his consort were portrayed on a throne surrounded by their attendants, officials and relatives. Typically, the ruler and his consort appear to be drinking wine from shallow cups. One or more sākīs kneel before their hosts, ready to replenish their cups from flasks standing on a nearby table (Felix Çağman and Zeren Tanndîn, The Topkapi Saray Museum: the albums and illustrated manuscripts, tr. J.M. Rogers, Boston 1986, 69, pls. 43, 44).

During the 8th/14th and 9th/15th centuries, features of these Mongol paintings—the table loaded with flasks, the kneeling sākī, and drinkers in a more naturalistic pose—are echoed in many subsequent depictions, even those produced for anonymous patrons which illustrate literary texts such as the Škāhimāna of Firdawsi or the Khamsa of Nizāmī and Khusraw Dihlawi (ibid., 89, pl. 56; T.W. Lentz and G.D. Lowry, Timur and the princely vision, Los Angeles 1989, cat. no. 21, p. 66, 110-11). Timūr’s grandson Bāysunghur b. Shāh Rukh is even shown with a wine cup in hand and attended by a sākī, one of whom kneels, while on horseback at a hunt (ibid., 132, fig. 132).

The most detailed presentation of the sākī’s role in Timūrid court life comes in the frontispiece of a Būstān of Sa’dī, now in Cairo, made for Sultan Husayn Bāykalār and dated to 893/1488. This double-page painting executed by Bihzād shows a drinking party in progress. Even though several participants have already succumbed to the effects of alcohol, five sākīs on the right page prepare another round of drinks.
Two decant wine from an unglazed jug into flasks while another pair pours an unidentified liquid from holding a spouted ewer, stands waiting, perhaps to mix water with the wine. Below them, a building containing a large earthenware vessel which may be a wine-cellar. In the upper right, above the five sākis, is a building presenting a large festival scene it is the shah, not the sākī, whom Hafiz compares to the moon, and his appearance becomes a signal for the serving of wine to celebrate the end of Ramadan. As a sākī hands the prince a golden wine-cup, a veritable parade of attendants carrying golden flasks on silver trays prepare to serve his guests, and two of them distribute bottles among the celebrants. Another painting from this manuscript explores the metaphor of intoxication as path to salvation and divine union. Even the "angel of mercy" shown on the building's roof offers other angels a cup of wine. In the building and its surroundings, several sākis ply their trade. One reaches deep into a large jar to fill the flask of a celebrant who brandishes a book in one hand as if trying to exchange it for wine, while others hold wine cups or wine jugs. The link between intoxication and poetic inspiration is alluded to by a white-bearded man, who tries in an inebriated state (S.C. Welch, Persian painting, New York 1976, 66-9, pls. 17, 18; Priscilla Soucek, Sultan Muhammad Tabrizi: painter at the Delhi court. New York 1989, nos. 58-9, 74-7, nos. 24, 32-3). Few paintings rival these in the subtlety and complexity of their interplay of visual and verbal conventions, but it is in the later 10th/16th and 11th/17th centuries that the sākī or sākīya emerges as an independent artistic theme in drawings or paintings designed to be mounted in albums. These sākis or sākīyān stand in coquettish poses or project a languorous and often androgynous sensuality, attributes of the cup-bearer long stressed in the literary tradition (A. Welch, Shah 'Abbas and the arts of Isfahan, New York 1973, 32, 65, 72, 82, nos. 11, 50; I. Schoukine, Les peintures des manuscrits de Shah 'Abbas I, Paris 1954, 189, 193, pls. XXV-XXVI, XXX-XXXIII, LXXV, LXXVII-LXXIX; Marie Lukens Swietochowski and Sussan Babaie, Persian drawings in the Metropolitan Museum of Art, New York 1989, pls. 58, 74-7, nos. 24, 32-3).

Remnants of similar paintings have been uncovered on the walls of Safavid palaces such as the Čahīl Sūtīn and ʿAli Kapu and particularly in their private inner chambers (Babaie, Safavid palaces at Isfahan: continuity and change (1590-1666), Ph.D. diss. New York University 1993, unpubl., 171-4, 183, 188-9, figs. 160-2, 169-72, 175-7).

The pairing of youthful sākis with bearded men was evidently considered particularly appropriate to the poetry of Hafiz. Two mid-11th/17th-century Hafiz manuscripts, one in Dublin, Chester Beatty, ms. P. 299, the other in Istanbul, Topkapi Sarayi, H. 1010, are virtual albums (A. J. Arberry, B. W. Robinson et alii, The Chester Beatty Library: a catalogue of the Persian manuscripts and miniatures, Dublin 1962, 68; F. E. Karatay, Pansa yazmalar katalogu, Istanbul 1962, 221, no. 645). The Dublin manuscript has 450 tinted drawings on 500 folios, and the Istanbul one 555 on 578 folios. Most of them juxtapose a youthful sākī and an older man.

Depiction of the sākī and sākīya in Islamic art have strong parallels with the descriptions of these figures in the literary tradition. Despite their initial role as servants, some came to embody an ideal of beauty which inspired poets and painters alike. This evolution, apparent in literature as early as in the 4th-5th/9th-10th centuries, became prominent in painting only later, especially under the Safawids.

Bibliography: Given in the footnote (PRISCILLA P. SOUCEK)

AL-ŠAKĪFA, SAKĪFAT BANĪ SĀVIDA. The word sakīfa (L'A, s.v.), an approximate synonym of sūfā (L'A, s.v.: bahw, mawqūf muqātalāt), denotes in Arabic a covered communal place appropriate for conversation and discussion. While the word sakīfa seems rather to be applied to the space covered with palm foliage which constituted the primitive mosque (see Massjīd, i, 2), sakīfa appears to denote any type of forum or public courtyard, covered in accordance with the same traditional procedures.

In historical texts, the term is applied virtually exclusively to the prolonged and acerbic negotiations which preceded the nomination of Abū Bakr as successor to the Prophet Muhammad in the leadership of the nascent community. These took place at Medina in the summer of 11/632, on the territory of the Banū Sāʾida, a Khazradji clan of the Ansār (q.v.). The expression sakīfah Banī Sāʾida, usually shortened to al-sakīfa or yasum al-sakīfa in the texts, is furthermore invariably applied to this specific historical episode.

The texture of the narrative, which figures in practically all accounts of the beginnings of the community, presented in the earliest times not as a continuous narration but in the form of hadīth, as a result of which it has become an article of faith in Sunni Islam, generally composed of the following elements:

(1) Respective merits of Abū Bakr and of ʿUmar. The Prophet had always shown a certain preference for his two original Companions, but possibly with a bias in favour of ʿUmar. The influence of ʿAbī Ḥishā (q.v.), who openly admired the latter, is perhaps not irrelevant in this context. The Prophet's explicit appointment of Abū Bakr to lead the prayer in his place, which is often evoked, remains inconclusive in that it does not relate formally to the political leadership of the community. Always present in this narrative, ʿUmar was furthermore to play the role of elder statesman to Abū Bakr, himself a somewhat colourless personality, until his own accession to the caliphate.

(2) Account of the sakīfa proper, with the following significant features:

The resistance of the Ansār to the appointment of a Muhāṣīr (see al-muḥāṣīrōn) is first shown by the reluctance of one of their chieftains, named Baghir b. Saʾīd b. Thālabā (q.v.), who nevertheless was soon to pledge allegiance. But he was replaced by another, the rather more formidable Saʾīd b. ʿUbdā (q.v.), who remained defiant until his death. The adherence of the Ansār was ultimately obtained—by force where cer-
tain elements among them were concerned. The Banū Umayya, for their part, would yield only to the decisions of Abu Ubayda b. al-Djarrāh [q.v.], successively obtained. The list of these groups, and the chronology of their adherence, suggest the more or less deliberate appropriation of an undoubtably authentic historical basis. Thus it is possible to observe successively the adherence of the Banū Umayya, of the Banū Umayya Uqba and of ‘Abd al-Rahmān b. ‘Awf, of the Banū Zubrah, of al-Zubayr b. al-Awwām, and finally of ‘Ali [q.v.].

In the account of Ibn Sa’d (d. 230/845), which is one of the most ancient known, the figures of ‘Ali, of Fāṭima, and subordinately, of al-‘Abbās, are totally absent. They feature strongly, however, in that of al-Tabari (d. 310/923), where ‘Ali is highlighted in his role of an opponent, supported by a faction of the Anṣār. Following on this, a special chapter is very often devoted to the oppositional attitude of ‘Ali and of his entourage, where all the evidence suggests that Fāṭima plays the central role. Being advised of the lukewarm opinions of the Anṣār, she is said then to have persuaded her husband to undertake a campaign of inducement aimed at them. Some weeks after the death of the Prophet she rather conveniently died, while ‘Ali remained apparently the last opponent. He was to come round in his turn bringing with him the “Banū Ḥādhim”. Al-‘Abbās, who sometimes appears as an adviser of ‘Ali on behalf of the ahl al-bayt [q.v.], and who maintained strong reservations regarding Abū Bakr and ‘Umar, withdrew from the game, no doubt with an eye to the future.

A final chapter comprises the “khudba of Abū Bakr”, a fragment of pious anthology of no great importance retained in the same terms by historians as well as by authors of adab.

The account of the sakīna is followed by that of the ridda [q.v. in Suppl.] and of the incomparable support which Abū Bakr received from ‘Umar in these circumstances.

The evolution of the form of the account, worthy of the ancient theatre, is very revealing. ‘Abbāsīd propaganda, after the wavering of the Mu’tazilī era, was obliged to rename the divisions of the ‘Umayyad of Sa’d and of the first two caliphs, whose postercity never represented a political danger, in contradistinction to that of their two successors who, in various guises, remained the symbols of two oppositional dynastic tendencies.

It is no less important to show how the ‘Umayyads, initially outsiders, were among the first to return to the fold, without a blow being struck. It is known that the tendency which become dominant from the 3rd/9th century onward is aimed at the rehabilitation of the “Umayyad century”, with the object of formulating a common front in opposition to the activities of the Shi‘is.

The account of the oppositional intrigues of Fāṭima, perhaps superimposed, shows incontrovertibly the permanent distrust by Sunnism in regard to ‘Alid dynastic aspirations, claiming descent from the Prophet’s daughter. But it is skillfully tempered by the account of the attitude of ‘Ali, who submitted without a murmur after the demise of his troublesome wife, earning his accession to the caliphate and the respect of future generations.

SAKĪNA (A.), a term of the Kur’ān and of Islamic religion. The root _š-k-n_ (Akkadian, Hebrew, Aramaic) or _š-k-n_ (Arabic) means basically “to go down, rest, be quiescent, inhabit”, and the corresponding Later Hebrew form to Arabic sakīna is _ṣakīn_. The term is primarily used in reference to the Ark of Yahweh. Now, according to G. Lecomte, “the glory (kdbod) “the glory is a step towards abstraction, its presence marked a halt in the march and its disappearance the resumption of the march (Exod. xlv, 36-8).”

The Hebrew usage is generally considered (though not by the native Arabic scholars) as the source of the term sakīna. Derived from the idea of “dwelling within s.th. or s.o.” is Ar. _miskīn_ “possessed by a spirit, demon, _ibilas_, cf. Syr. _ṣakīnā_, pl. _ṣakīnē_, “the demon within a person”. Not in fact connected with this Arabic term, but deriving from a different root in Akkadian, via Hebrew and Aramaic, is Ar. _miskīn_ “destitute, poor, wretched”; for this, see _miskīn_.

The Kur’ān has a large number of words derived from the root _š-k-n_. Apart from the basic meanings of “habitation, residence, hearth, shelter for the night, place where spowers them” (cf. I Sam. vi, 18, xxi, 8), there are also “to subdue (the winds)” (XLII, 33), “to cause the water to settle on the earth” (XXIII, 18), “to halt the shadow” (XXV, 45), etc. What interests us here is the allegorical sense assumed by the term sakīna in six verses of the Kur’ān, beginning with II, 248, where it refers to Biblical history. The Israelis, refusing to acknowledge the sovereignty of Saul, God’s Chosen One, to receive power them (cf. I Sam. xvi, 11 ff.), hear their prophet (nabīyuhum = Samuel) say, “The sign of his kingship will be that the Ark (ṭabāt, which had been carried off by the Philistines, I Sam. v, i ff.) will come to you. [In this Ark] there is sakīna from your Lord and a relic (bakiyya, the heritage of the prophets, sc. Moses’ staff and Aaron’s yellow turban, according to Ibn Ṣidāh, in L’A, ed. Beirut, ii, 174-5) of what was left by the family of Moses and the family of Aaron, and (sc. the Ark) will be carried by the angels”.

According to Exod. xl, 34-5, in the Ark there was “the glory (kdbod) of Yahweh. Now, according to G. Vajda, the term _ṣakīnā_, absent from the Bible, assumed “in some way a consequential meaning to the Biblical word _kdbod_. It implies something of God, without being taken, in the majority of its attestations, as being identical with God. His translation of “presence” is a step towards abstraction, its spiritualisation, if one wishes to express it thus, without bringing us much knowledge of the object signified (cf. the review of Goldberg [see Bibl.], in REJ, cxxviii [1969, publ. 1970], 280-2). In essence, Goldberg’s opinion, 455, is that, in Vajda’s formulation, the term _ṣakīnā_ was expressly created to denote the act of inhabitation, and then the divinity which “inhabits” it. Originally, and above all, the term thus denoted the divinity present in the sanctuary; it was accordingly first of all limited to the type of _ṣakīnā_ involving a presence and only understood secondarily in the sense of manifestations of the divinity (ibid., 281).

This “presence” of God was equally displayed outside the Ark by a cloud which enveloped it. Its presence marked a halt in the march and its disappearance the resumption of the march (Exod. xl, 36-8).

It is this presence of God which the term sakīna ex-
presses in the other Kur'ānic citations, a presence
shown in the divine aid vouchsafed to the Prophet and
the believers in battle, giving them the victory. Hence at
the encounter of al-Ḥudaybiya [q. v.] in the year 6/679, on the way to Mecca, “God was satisfied with
the believers when they were swearing allegiance to
you under the tree, and He knew what was in their
hearts, and He sent down upon them the sakīna and
He recompensed them with a victory near at hand”
(xlviii, 18). At the time of the conquest of Mecca, “It
is He who sent down the sakīna in the hearts of the
believers, in order that they might add faith to their
(faith) (existing) faith” (xlviii, 4). Confronting the
unbelievers whose hearts were still animated by the
fierceness of the Dhāhiyya, “God sent down His sakīna
upon His messenger and upon the believers, and
caused them to cleave to the word of piety” (xlviii,
26). Already, fleeing from Mecca in the company of
Abū Bakr, “God sent down His sakīna upon him (sc.
in the Cave) and supported him with hosts whom you
did not see” (ix, 10).

We are thus in a context of warfare, as were the
believers in the time of Saul who asked God to give
them a leader capable of leading them to victory (cf.
Kūrān, II, 246).

This divine aid, bestowed on the Prophet at Badr
(III, 123 ff.), is vouchsafed by an innumerable, invis-
ible army, which appears in the shape of a “transparent, waterless cloud” (or in the form of a
mythical bird), called by Tradition sarad, sarad or sar-
rad. Muḥājirūn (sūrat al-Imārāt) relate that “the sakīna
and Gabriel came with Abraham from the north (al-
-Shām)” (cf. his Taṣfīr, ed. ‘Abd al-Rahmān al-Tāhīr
b. Muhammad al-Sūrātī, Dōba, Kaṭa’ar 1396/1976,
114). Al-Azraqī, Aḥḥār Makka, 27 ff., cf. also L’A.
loc. cit., likewise relates that it was with Abraham (cf.
Goldberg, 300 ff.) that the sakīna came to Mecca. It
had a head like that of a she-cat and two wings (on the
sakīna as a supernatural form in animal form, see
Goldzīher, Abhandlungen zur arabischen Philologie,
Leiden 1896-9, i, 198, and Scholem [see Bibl.], 53),
and it came down “like a cloud (qamāma) or a mist
(dahāba), having in its centre something like a head
which could talk” (27). Later on (30), “‘Ibrahim came
from Armenia on Burāq [q. v.] with the sakīna, which
had a face which could talk, it whispered like a light
breath.” When Abraham wished to build the Ka‘ba, the
sakīna unfolded itself like a snake on the first foun-
dations and told him, “Build on top of me”, “and so he
built; hence every Bedouin in flight and every
powerful person inevitably circumambulates the san-
tuary under the sakīna’s protection” (31).

All these traditions connect the sakīna with the
sanctuary, as it is in Kūrān, II, 248, and link it with the
Prophet’s battles, with the idea of his being victorious,
as in the other citations involving God’s aid in the
form of an invisible army. In a study on this view of the
Hamīs, in REJ, cxxx (1971), 165-82, J.-Cl. Vade brought forward an argument giving credence to this view of
things. He explains the Kūrānīc āhāsan hāhhāy in, in
III, 146, by the Biblical hapax mā-rimḥānt kādekh
(mostly amended to mārīḥānt kādekh) (Deut. xxxiii, 2, cf.
v. 17, refer to “hosts” of Ephraim), to be translated as “the saintly hosts”. Moses, “the man of God,” blessed the Children of Israel before he died, saying Yahweh has come down from Sinai; He raised himself up for those of Seʿer; He shone forth from the mountain of Pharan; and He came forth from the saintly hosts”. Envisaging his approaching end, Muḥammad asks his devotees what they would do after his death, “Would you go back to your errors?” and he continues, “How many a prophet has there
been who has fought at the head (or: accompanied by)
numerous armies (riḥāṣyūn kāfīrān), and they did not
become discouraged because of what befell them in the
way of God, nor grew weak nor became quiescent
(sitākūnā?)” (Qurān 52:10). God loves those who endure
(III, 146).

Placed in a context like that of Deut. xxxiii, 2, sc.
Moses’ farewell speech to his community, this verse
takes on a quite different meaning. It is thus a case of
innumerable, invisible armies by means of which God
sustains His prophets in the accomplishment of their
missions, i.e. of the sakīna being identified with the
Ark and signifying its Presence, and of riḥāṣyūn sarad
denoting innumerable, invisible armies by means of which God loves those who endure
(III, 146).

Beyond this prophetical context just noted, the sakīna
assumes in Hadith (see Concordance, ii, 494-5), as
in rabbinical tradition (see Goldberg), a spiritual and
moral signification. It “enveloped” the Prophet
(ghabdat-ha) at the moment of revelation (waqāy),
came down (nasalāt) on the Kūrān ("We have
brought down the Kūrān in a discontinuous form
(fasīm) and the sakīna in a continuous one (sabīn)"),
hovered above the Prophet when he left ʿArafā and
above the believers, and spoke with the tongue (lisān)
of ʿUmar (b. al-Ḵaṭṭāb). It is identified with a collect-
ion of moral attitudes and virtues—gravity, bearing,
modesty, dignity, calmness, patience, magnanimity,
clenency and everything which characterises a pious
person. In Islamic mysticism, it becomes an “interior
illumination” (nīr fī l-kabīl), after the manner of
gnosis and the Kabbalah, which make it into a “light
emanating from the primaeval light” (Urlicht) which
is none other than God Himself (cf. Scholem, 78 ff.).

F. T. FAHD

SAKIZ (the Ottoman Turkish name for Chios, the
Greek name of this island and of its capital; sakiz
means “gum mastic”, a testimony to the product for
which Chios was famous), an island in the eastern
Aegean alongside the Turkish coast, from which only
8 km/5 miles separate it at the narrow point of the
strait of Chios (Sakiz boğazı); the large peninsula of
Karaburun on the mainland, jutting north, separates
the island’s northern half from the gulf and port of
Smyrna [see ISMIK in Suppl.].

With an area of 841 km², it is the fifth largest island
of the Aegean after Crete [see Trakya], Euboea [see Éubois], Lesbos [see MÝDILLI], and Rhodes [see RÖDOS]. Administratively, Chios forms one of
Greece’s 52 nomoi; its nomos also includes two other
important islands: Amorgos and Ægina, the one some
20 km/12 miles to the west, and the Oinousses
islets (Koyun adalari in Turkish, Spalmadori in
Italian; the last-named form is customarily used in
western scholarly literature) between it and the
Karaburun peninsula. The capital and main port city
is situated on the island’s eastern coast near the
strait’s narrowest point opposite the Turkish harbour
of Çeşme [see Çeşme].
The importance of Chios, which it owed to several factors, rose to a peak between the 14th and 16th centuries but continued until the early 19th. The factors were its crossroads position on maritime and continental trading routes, the uniqueness of the much-prized gun mastic produced nowhere else (lentisk shrubs grow in other parts of the Mediterranean too, but only the soil of southern Chios gives to the gum which their bark exudes the desired quality), and the acumen of the Genoese (masters of the island between 1304 and 1566), who used the port, in tandem with Galata, as the hub of their commercial empire; in fact, most of these aspects continued even after the Ottoman conquest of 1566 or re-emerged in other forms (such as the enterprising spirit of its Greek population). The island's role in the Middle Ages must be linked with that of the two Phokaiais from where the Genoese exported alum, and with the port of Çeşme from where goods other than alum brought from or through Anatolia were ferried to Chios for long-distance shipment. The last-named aspect continued well into the Ottoman period until it was definitively eclipsed by the dramatic rise of Smyrna in the 17th century.

No known evidence suggests that Chios would have attracted much attention of the Arabs in the early centuries of Islam, but its proximity to the mainland exposed it progressively to Byzantine raids once the Turks penetrated Anatolia by the end of the 11th century. The maritime principality (1089-92) of the two Phokaiais from where the Genoese exported alum, and with the port of Çeşme from where goods other than alum brought from or through Anatolia were ferried to Chios for long-distance shipment. The last-named aspect continued well into the Ottoman period until it was definitively eclipsed by the dramatic rise of Smyrna in the 17th century.

Some of the contradictions and special features that marked the history of mediaeval Chios continued during its Ottoman period. Until the tragedy of 1822, the island enjoyed a unique status that made it stand out as a prosperous and happy place where all the three main communities—Orthodox Greek, Catalans, Hospitallers of Rhodes, Genoese, or more general leagues of western Christendom, ceaselessly urged on by the Popes. The high price, both spiritual and economic, of western help and presence sometimes made such Byzantine emperors or contenders for the throne as Andronicus III (1329-41) or John Cantacuzenus prefer a Turkish alliance. Chios came by 1304 under the control of the Genoese family of Zacarria; meanwhile, they or their other countrymen also laid hands on the two Phokaiais (Old and New, Eski Foça and Yeni Foça in Turkish) near the northern entrance to the Gulf of Smyrna. Although their hold on Chios was interrupted by Andronicus, who with the help of Umur Beg reclaimed Byzantine control of some of these places (this help, however, could receive a different interpretation in the Turks' eyes: the Ottoman historian El-Faki mentions a raid on the island by Umur, who carried off much mastic as booty and subjected the island to the khāridī [q.v.], thus incorporating Chios into the Dār al-Islām; see Ilačić, in Bibl.).

The Crusade of 1344, which captured Smyrna from the Turks, set in motion a chain of events that indirectly led to a Genoese reconquest of Chios (1346). This time it was not a family but a company of shareholders who acquired control of the island and kept it until the Ottoman conquest of 1566. This company was known as the Maona of Chios, and secondarily, from 1362 when its definitive charter was established, as the Giustinianis; "Maona" is believed to be a term of Arabic origin (maʿāna "help, solidarity"), hence commercial company; see Bibl. and Maʿāna). The Giustinianis were a family whose house in Genoa was acquired by the company as its headquarters there. A podestà sent by the government of Genoa was the titular governor of Chios (as were the two podestàs of Old and New Phokaia respectively), but otherwise, the company was virtually autonomous on the island. Initially, a vague kind of suzerainty was also conceded to the Byzantine emperor, and an annual sum was sent to him; gradually, however, the tribute paid to the Turks became more significant. At first given to those of Aydın (by the Byzantine governor in Andronicus's time), eventually this sum became an important annual tribute sent to the Ottoman sultan, and kept increasing until it reached 14,000 ducats in Süleymān II's [q.v.] time (still bearable, if the reported revenue of 30,000 ducats did not falter). It was the Maona's inability to carry out this obligation during the last three years of their rule that by 1566 contributed to the Ottoman decision to seize the island.

Genoese rule in Chios was remarkable for its long duration in the face of Ottoman expansion, for the economic role the island played as a source of gum mastic, as a transit port in international shipping, and for the co-existence of a Greek Orthodox population with a ruling Latin Catholic elite. Luck (a grain of presents on board the commander's ship, and an essay that the conquerors of Chios did not lose all their privileges forthwith. These last survived even the 1599 attempt by the Florentines to conquer the island, but the Venetian conquest and brief possession in 1694-5 did deal them a serious blow which, however, further strengthened the position of the Orthodox majority governed by an enlightened oligarchy: the Catholic élite, accused of collaborating with the invaders, definitively lost their
privileges to the Greeks. The Venetian attack, undertaken during the Ottoman-Hapsburg war of 1683-99, provoked a naval response from the Turks, whose ultimate victory revealed the successful modernisation of the imperial fleet under the able leadership of Mezmentor Hüseyn Paşa [see HUSAYN PASHA, MEZMORTO]. For the reasons stated above, Turkish victory ushered in what may have been the happiest period in the history of Chios and which lasted until 1822. The island continued to export gum mastic (partly to Istanbul, where the ladies of the Harem were among the principal consumers), but it also participated in the dramatic surge in trade of Ottoman Greek maritime trade and merchant marine during the 18th century. Entering families developed business ties with Europe, and participated in the intellectual and scientific rise of the West, some of which they in turn propagated in Ottoman society where they frequently enjoyed the status of high officials and the sultan's physicians. Alexander Mavrocordato (1637-1719), who had studied medicine in Padua, wrote a Latin treatise on the circulation of the blood, and became prominent as the chief dragoman of the Porte during the negotiations that led to the Treaty of Karlowitz in 1699 [see KARLOVITCH].

The waters off Chios were visited by the Russians in the summer of 1770, an operation undertaken in the framework of the Russo-Turkish war of 1768-74. A Russian squadron under Admiral A.G. Orlov and the Ottoman one under Hüsâm ul-Din Paşa ended in a draw, but it was highlighted by the exploits of the kapudan-i hamâyûn Hasan Beg (later Paşa; see GEZİRL İLÎ GEZÎ HASAN PAŞA) against the ship of Admiral G.A. Spiridov. The Turks withdrew to Çeşme, which by then served as a naval base; the result was the notorious destruction of the entire Ottoman fleet by fire ships with which the Russians managed to attack the crowded harbour in the night of 7 July. The subsequent attempt to seize the port of Chios was repulsed by the Turkish garrison, or was given up due to reports of the plague on the island. While the triumph at Çeşme earned Orlov the honorific title "Cesmenski" conferred on him by Catherine II, Hasan Beg's heroism was noticed by Istanbul, which aptly entrusted to him the defence of the island and the rescue of Lemnos from the Russians and eventually raised him to the post of kapudan paşa.

The peace and prosperity of Chios abruptly ended in 1822, when revolutionary Greeks from other places, especially from the island of Samos [see SISSAM], landed on Chios and incited some of its inhabitants to second the uprising which was agitating the mainland. The besieged Turkish garrison in the capital's citadel held out until the imperial fleet brought relief. The subsequent repression carried out on the orders of the governor, Wahid Paşa, against the objections of the fleet's commander, the kapudan paşa Naşûz-zâde 'Ali Paşa, crippled the island (which lost over one-half of its population—estimated at some 80,000 souls—in the slaughter and deportation to the slave market in Smyrna), and may have indirectly spurred Europe to increase its support for Greece's independence. The most conflicts involving Chios, this one too had a markedly naval dimension, and although the Ottoman fleet prevailed, the Greek side scored a well-remembered triumph when on 18 June Konstantin Kanaris sank the Turkish flagship in the harbour of Chios; while the kapudan paşa with most hands perished, the Greek native of Psara thus launched his own career that would propel him to the pinnacle of Greek politics. Both Mezmentor Hüseyn Paşa and Naşûz-zâde 'Ali Paşa are buried in Chios.

Nevertheless, Chios displayed remarkable resilience even after this tragedy, and benefited once more from the benign Ottoman rule which by 1822 allowed the Greek population to re-establish much of its internal autonomy; this was underscored by the respect which the sultan 'Abd al-Meçjid I [q.v.] showed the island's ruling elite during his 1856 visit. On the formal level, the Chioîtes' self-rule ended in 1823/1866 as a result of the restructuring of the Ottoman empire, which replaced the eyalet structure with that of the much more uniform vilayet [q.e.v.] system; the administration and military command of Qızâzâ'r-i Bahâ'i Sâîfîd, usually in Rhodes, sometimes moved to Chios. The governor of the island (called müezeferî in this period) was from 1887 until his death in 1888 the Ottoman writer and reformist Nâmis Kemâl [see KEMĂL, MEHMED NÂMİ]. The recovery of Chios, well under way during this final stage of Ottoman rule, was dealt a serious blow by a devastating earthquake in 1881.

Ottoman rule in Chios ended in the same manner as in Lesbos but slightly later (December 1912/January 1913), and Greek sovereignty was ratified by the same two treaties (London 1913 and Lausanne 1923).
SAKIZ — SAKKAKI

vant Company, Oxford 1935; Elizabeth A. Zachariadou, Trade and crusade: Venetian Crete and...

In any case, it is clear that the work of Sakkaki is directly related to the

On the other hand, a refusal to supply water to a thirsty person is an act of hadith, to the thirsty and the poor members of the community. An

It was therefore recommended to wealthy Muslims to build water-
fountains (sabil [q. v.] and dig wells for charitable purposes. The habitat of selling water from a well (bi’t) to the people of Medina, after the Hijira of the Prophet Muhammad, led the companion 'Uthmân b. 'Affân to buy the well-known bi’t Rûma for supplying water free of cost to many inhabitants of the oasis town. An engraving on a public fountain in Cairo proclaims the tradition that the offering of drinking water is an act of charity; to quote in this context is a

The virtue of carrying water extolled in an Islamic tradition inspired many pious Muslims to accept this profession. Such were the notable instances of the Arab poet Abû Tammâm (d. 232/846), the Persian

1326), 150-77 (the 1770 events); E.V. Tarle, 

SAKKÁ (A.), lit. water-carrier, was a term denoting manual workers who carried water in a leather-bottle (kirba) or jar (kîz) on their shoulders or on a mule (and even on a camel in rare circumstances) in pre-modern towns and large villages as well as pilgrimage centres throughout the Middle East and North Africa. A leather bottle during the early Islamic period reportedly cost a modest sum of about 3 dinars. The necessity for supplying drinking water to the thirsty and the poor members of the community was regarded, according to a tradition (hadith), as a work of excellent charity (sadaka). On the other hand, refusal to supply water to a thirsty person is an act of great sin (al-Dhahabî, masi,

It may just betray a shade of southern chauvinism here, but

Abd Allah Ibn al-Sakka Mukri (d. 572/1176) is relatively depreciative of Sakkaki’s work by another poet is the quotation

As we can infer from the career of Muhammad b. Affân (d. 110/729) affirmed the favourable status of the water-carrier in his interpretation of dreams. Also, the writers of the hisba manuals insisted on cleanliness and the hygienic condition of the jars, cups and leather bottles of the water-carriers in the interest of public health. The encyclopaedic Arabic biographer al-Safadî (d. 764/1362) noted that al-Sakkâ was an established nisha among his contemporaries, who included some teachers of the hadith

SAKKÂKI, one of the early poets in Câghatay Turkish (‘early’ meaning, before Mîr ‘Ali Shîr Nawâ’î’s [204] time). He lived around 802/1400, presumably in Samarqand, but certainly all his lifetime in Transoxania. As we can infer from the dedications of his kasidas, his patrons included Khâlîl Sultan (ruler of Transoxania), Sîyâhûr b. Nawa, and Hârîn (see bibliography). The following statement by Nawâ’î is well-known: he says that he heard people in Samarqand claim that “all good poems by Lûfî belonged to him (Sakkakî); he (Lûfî) has stolen them and has attached his name to them.” Nawâ’î goes on to comment that “this is the kind of silly boast which is widespread in Transoxania”. The statement is usually wrongly interpreted the other way round by Turkish scholars as meaning that Sakkaki was rumoured to have done the stealing.) Indeed, Nawâ’î may just betray a shade of southern chauvinism here, quite apart from the fact that a certain amount of pride on the part of the Transoxanians may be expected for a time in which the focus of literary activity only just has been shifting southwards to Harât. In any case, it is clear that the work of Sakkâki is directly

workers. The carriers of the essential commodity of water enjoyed probably the highest prestige among pre-industrial workers in Islamic society. Ibn Shiîn (d. 110/729) affirms that the favourable status of the water-carrier

time). He lived around 802/1400, [q.v.]

'Abî Abd Allah Ibn al-Sakkâ (d. 572/1176) regularly earned a livelihood as a water-carrier supplying water manually to the houses of the public. Ibn al-Sakkâ was also a recurrent of Islamic traditions. Many Arab historians and writers of the ’Abbasid epoch quote Dhu ’l-Nûn al-Mi’rî’s (d. 245/869) frequent reference to a case of the virtue (murâa) in the life of a well-dressed Baghdadî itinerant water-carrier (sakkâ), who refused to accept payment of a dînâr as the price of a drink of fresh water from a foreigner.

In spite of their good reputation, however, the water-carriers, according to al-Djâbiz, could never become wealthy and prosperous during the heyday of the ’Abbasid caliphate; their poor economic condition was comparable to that of the brick-layers, potters, ploughmen and groups of other minor craftsmen and
interrelated with Lutfi’s poetry (Eckmann 1959) and that of others (Hofnian 1969).

Both the language and poetics of Sakkak’s highlight the arbitrary nature of his classification as a “Caghatay” poet; at least in the early stage, this designation at one and the same time refers to a person being a Persian-style court poet and to the political context (i.e. he worked at a Timurid court).

But his language has preserved some typical Kh”arazmian Turkish traits, e.g. the rendering of “8 as z ~ y (e.g. azat ~ azaq “foot”); this tendency is probably enhanced by the fact that he was from Transoxiana and may thus have been influenced in solving this problem of the relationship of his poetry with other contemporary poets (most notably: Lutfi). The rules of ‘arād metrics applied by Sakkak also definitely reflect the late Kh”arazmian Turkish stage. It is the same as is found in Kh”arazmi’s Mahabbat-nāma: etymologically long vowels are still frequently metrically long, whereas a first stage of Persification is Mukhtar b. Muhammad al-Zahidi (d. 658/1260) who is said to have studied kaldm with him; Mukhtar is the author of

He died toward the end of Radjab 626/mid-June 1229 in Karyat al-Kindi near Almāglih in Farghāna. In spite of his fame already during his lifetime, the circumstances of his life are shrouded in obscurity—a fact most likely attributable to the upheavals of the Mongol conquest. Very few notices on him appear in the Hanafi biographical dictionaries (Ibn Kułubbūgha, Tādī al-tarājud, Baghdad 1962, 81-2; Ibn Abi ’I-Wafā’ al-Kurāshi, al-Dawffur al-mudsiyya, Haydarābād 1332, ii, 225-6; and Abd al-Hayy al-Laknawi, al-Fawā’id al-bahsyya, ed. B.A. al-Nasā’i, Cairo 1324/1906, s.n.) as well as in al-Suyūtī’s dictionary of language scholars (Bugbati wa’d, ed. M.A. Ibrahim, Cairo 1384/1965-ii, s. 364), while some legendary and anecdotal accounts have been transmitted in the Eastern tradition (prominently in al-Kh”ansārī, Rawdāt al-dawnd, ed. M.A. al-

Critic of language scholars (Bughyat al-wu^dt, ed. B.A. al-Na

Al-

Arabo-Persian loan words).

These philological, linguistic and literary problems still await thorough treatment; even a critical edition of Sakkak’s poems is lacking. The only version of Sakkak’s dīwān extant is contained in 31 folia of a British Library manuscript, Or. 2079, and even that is incomplete. It contains one munjid, one na’t, 12 kasidas (plus one defective one) and 57 ghazals (ghazals with end rhymes from bi to nun are lacking). Three more ghazals (parallel in Uyghur and Arabic script) were found in a manuscript of the Ayasofya Library, Istanbul, 4757. One bayt is quoted by Nawātī, and one bayt by Yakīnī (ms. B.L. Or. 2079, fol. 319b).

AL-SAKKAKI, ABO YA’KUB YUSUF b. ABO BAKR b. Muhammad al-Kh”arazmi Sirāḏī al-Din, influ-

tential rhetorician writing in Arabic. He was born in Kh”arazm on 3 Dżumāda I, 555/11 May 1160 ac-

cording to most sources, or in the year 554, according to his contemporary Vājt (Irshād, ed. Rižīf, xx, 59).

The only known disciple of al-Sakkak is Mukhtar b. Muhammad al-Zāḥidī (d. 658/1260) who is said to have studied kadim with him; Mukhtar is the author of
The fikh work Kunyat al-munya which has acquired a certain fame for being one of the few sources for the old Kh"azr"azmian language, containing, as it does, phrases in that language that have some legal import (see Ket"arazm, vol. IV, 1062). It is not unlikely that al-Sakk"aki was quadrilingual in Kh"azr"azmian, Kh"arazm Turki, Persian and Arabic.

In spite of a number of loss or doubtful works that have been ascribed to him, al-Sakk"aki is really a man of one book, the Mi'Afah al-'ulum. This "Key to the Sciences" is not, as imprecise formulations in secondary sources can lead one to believe, a work of rhetoric. Rather, the author intended to cover all linguistic disciplines, with the exception of tagha 'lexicon, lexicography'. The work is divided into three main parts dedicated respectively to 'ilm al-sarf 'morphology', 'ilm al-nahw 'syntax', and 'ilm al-ma'ani wa l-bayan 'stylistics and theory of imagery'.

The first part contains at its beginning also a brief section on phonetics (maqhd"rdi al-hurj) and a discussion of root formation and semantic derivation (istidill), while the third part has the following supplements: (1) a brief section on rhetorical figures (wa'da<j> ... li-ka'd tashin al-bal'aman); (2) a tukmila on had' 'definition', and (3) one on istidill 'argumentation'; and (4) and (5) a tatta'mma on poetic dealing with 'ilm al-ar'ad 'metrics' and 'ilm al-k"afya 'rhyme theory'. Finally, in the kh"atima the author wards off attacks on the linguistic correctness of the Kur'\'an. A complete count "lexicon" of al-Sakk"aki's work has not been made, but a brief section on rhetorical figures (wa'da<j> ... li-ka'd tashin al-bal'aman) and a tukmila on had' 'definition', and (3) one on istidill 'argumentation'; and (4) and (5) a tatta'mma on poetic dealing with 'ilm al-ar'ad 'metrics' and 'ilm al-k"afya 'rhyme theory'. Finally, in the kh"atima the author wards off attacks on the linguistic correctness of the Kur'\'an. A complete count "lexicon" of al-Sakk"aki's work has not been made, but a brief section on rhetorical figures (wa'da<j> ... li-ka'd tashin al-bal'aman) and a tukmila on had' 'definition', and (3) one on istidill 'argumentation'; and (4) and (5) a tatta'mma on poetic dealing with 'ilm al-ar'ad 'metrics' and 'ilm al-k"afya 'rhyme theory'. SAKKARA — SAKSIN 895

[q.v.], the capital of the Egyptian Old Kingdom, to
which this city of the dead belonged. The modern
Arabic name of the village is derived from
Sokar/Socharis, the coffin one‘, i.e. the King of the
Dead, whose name is supposed to have been in the
vicinity. The famous necropolis of Sakkara which
developed, during the first three dynasties of the Old
Kingdom, from north to south along the mountain
range and then westward into the desert, contains
royal tombs (pyramids, mastabas) of the three first
dynasties (including the famous step pyramid (al-
haram al-mudarra‘) of King Djoser of the Third Dynas-
ty), primarily from the Sixth to the Fourth Dynas-
ties, free-standing chapels from the first in-
termediate period and the Middle Kingdom, and, last
but not least, the burial sites from the Saitic era, when
Memphis re-emerged, after the Assyrian yoke had
been shaken off, as a major centre of the country.
In this late period, the pristine Egyptian cults were con-
sciusly resuscitated, both on religious and economic
grounds. New cemeteries were opened in Sakkara—as
it were, on sacred ground—for all strata of the
population. And it was during this final period of Egyptian
independence (21st Dynasty onwards) that the famous
burial catacombs and mortuary-cult temples for the
Sacred Animals of Memphis, notably the Serapeum
for the Apeel Bulls, were erected within the Sakkara
necropolis. To the mediaeval Muslims the mum-
ificados animals that were found here were particularly
fascinating (not the least because they were so
reprehensible on dogmatic grounds) (cf. e.g. al-
Makrizi’s report on the dead “hoopoe”,
hudud = ibis, Das Pyramidenkapitel in al-Makritzi’s
“Usifat”, ed. and tr. E. Graefe, Leipzig 1911, Arabic
text 21, 1. 4, German tr. 67).

Sakkara’s importance for Egyptology was further
enhanced by the discovery, in 1824, of the first two
papyri, contained in sealed pottery, in a tomb (or
well) in the funerary precinct.

The Arabic toponym that, during the Islamic Mid-
dle Ages, seems to have customarily denoted the
necropolis of Sakkara with its awe-inspiring and vast
Pharaonic architectural vestiges, was, however, not
Sakkara, but rather, by way of metonymy, “Dayr
(A)b Hurmis”, the monastery of Apa Jeremias
(should one rather read: Dayr Hurmias?), cf. Mardikh.
On the chest of the dead man, the monuments
of the villages surrounding the great pyramids of Djiza, Abū
Dja‘far al-Idrisī (d. 649/1251) omits Sakkara, yet
names, as no. 14 and no. 16, both Bū Hurmis and
Shubra Bū Hurmis (Anwār ‘ulūmiyya fi l-ahdrām fi l-khāb
‘an asrār al-uhm, 50, II. 7 and 8; we also find Bū Sīr
Bū Raṣāf and Bū Sīr al-ahram, 50, II. 8 and 9). Apa Jeremias’
monastery (whose remains were rediscovered only at the beginning of the 20th century and
where excavations continue to take
) was the main place of the Sakkara necropolis.

The historian and traditionist Kadi Muhammad b.
Salāma al-Kudādī (d. in Fustah in 145/1062), reporting
from the well-known Egyptian authority Yahyā b.
‘Uthmān b. Sālih (d. 282/895), relates the story of the
denizen of the Upper Egyptian Kopos/Kifti and how
a corpse was discovered in this monastery when a grave
was dug there; if we take the script of a papyrus scroll from the aegis of the Roman emperor
Diocletian was found, written in “oldest Coptic”
script, which informed of the otherwise inaccessible
anachronistic Egyptian history (cf. Abū Dhja‘far al-
Idrisī, Anwār, 100, 1. 3-102, 1. 4; al-Makritzi, Khatā, in
Pyramidenkapitel, 21, 11. 13 ff., German tr. 67 ff., cites
the same report, probably on al-Idrisī’s authority).

The region of Apa Jeremias, i.e. Sakkara, was cor-
rectly identified as the heartland of the most ancient
Egypt. The Sharif Tād al-Sharaf Muhammad
al-Hasayn al-Ḥalabi, al-Ubayḍali (d. 666/1267), an avid student of Pharaonic architecture
in his time, placed the cradle of the oldest Egyptian
people in this very region (nawāthī Bū Sīr wa-Bū Hurmis, cf. Anwār, 107, 1. 12), and, incidentally, even
considered as conceivable a pre-Adamite (not just
antediluvian) date for their impressive activities.

From the testimony of stones found in St. Jeremias’
monastery that bore hieroglyphic inscriptions not—or
not only—on the visible front side, but also inside,
where they were connected with neighbouring slabs,
he inferred the existence of different historical layers
in the history and architecture of Old Egypt.

The step pyramid in the immediate neighbourhood
of Apa Jeremias’ monastery is portrayed as the tomb
of the legendary Egyptian knight (fāris abī Mīr) Rāyās, who had the valour and strength of one thou-
sand fighters, whereas the huge pyramid to the north
of the monastery, also built in steps, is said to have
become the resting place of Rāyās’ sovereign (cf. Ar-
war, 118, 11. 8 ff.; al-Makritzi, Pyramidenkapitel, 27, 11.
3 ff., German tr. 72). Also, Yākūt speaks, in his
geographical report (s.v. Dayr Hurmīs), of the pyramid by the monastery of Apa Jeremias.
Other authors, such as Abū Sāliḥ al-Armani (Churches and
monasteries, fol. 65a), only summarily refer to the
“sacred and populous” monasteries in the al-
Djiṣīya province.

Like all the spectacular Pharaonic sites, the mastabas of Sakkara have also been identified with
localities of the Muslim kisas al-anbiyā‘ [q.v.]. Whereas
the great pyramids of Djiza were seen, by some authors, as Joseph’s granary, his prison
(tṣmīn Yūsuf), it tended to be localised in Sakkara (see e.g. al-
Kalkashandi, Shubra Bu Hirmis, iii, 317, 11; see also the
reference given by J. Walker in the EP I art.).

Bibliography: A lengthy bibl. of mediaeval
Islamic Pharaonica is to be found in U. Haarmann,
Das Pyramidenbuch des Abū Ga‘far al-Idrisī, Beirut
1991, Arabic 272-83. On the apocryphal tradition
associated with Old Egypt in mediaeval Islam, see
now also U. Sæglin, al-Mas‘ūdī, Ibhrā‘īn b. Wāsīfīāt
and the Kitāb al-A‘lāb. Aigipetica in arabischen Tex-
ten des 10. Jahrhunderts n. Chr., in ZGAW, viii (1993),
1-70.

SAKKIZ, a small town of Persian Kurdistan, now
the chef-lieu of a shahristān or county in the prov-
ince of Kurdistan (lat. 36° 14’ N., long. 46° 15’ E.). It
lies on the western side of the upper Djeqāhu Cay
valley some 77 km/50 miles to the southeast of
Mahābid [q.v.] and on the road southwards to
Sanandaj and Kirmāngāh [q.v.].

The Kurdish population are from the Mekri tribe,
Saḥfī Sunnī and with the Nakhchbandī Sufi order
influential amongst them. In the early 20th century, the
local khan was a relative of the wāliī of Ardalan
and Sanandaj. In ca. 1950 Sakkiz town had a population
of 9,900, but by 1991 this had risen to 99,048
(Preliminary results of the 1991 census, Statistical Centre
of Iran, Population Division). Until recently, it had a
small community of Neo-Aramaic-speaking Jews,
but these have now probably all emigrated to Israel.

djuhrāfisā-yi Iran-zamin, v, 241-2.

SAKSIN, the name of one or more cities in
Western Eurasia.

The location of this city (or cities) is still unclear. It
is unrecorded in the classical Islamic geographies.
Māḥmūd al-Kashghāri (tr. R. Dankoff and J. Kelly

(C.E. Bosworth)
Cambridge, Mass. 1982-5, i, 330), who finished
writing his Dīwdn lughāt al-Turk in ca. 469/1077, notes
it as "a city near the Bulgār. It is Swuwar." The latter
was a tribal name (Sawvis/Sawvispo) of the Latin
and Byzantine sources) of one of the constituent
elements of the Volga Bulgārs. In this regard, Togan (Ibn
Fadlān's Reisebericht, 203-4, cites the theologian
Sulaymān b. Dāwūd with the nsbha al-Suwārī or
al-Saksīn. It seems unlikely that this is the Volga
Bulgarian city of Suwar, which was within the
Bulgār core lands. Rather, it probably points to the
presence of a substantial Swuwar population in Saksīn
which is confirmed by Abū Hāmid al-Gharnātī (see
below). Mustawfī (Nuzhat al-kulub, 259, 252; Togan,
op. cit., 204), pairs Saksīn and Bulghar as "two small
cities of the sixth clime", much land belongs to them
and they export furs. He places them at 32° = 750 far-
(c) below). Mustawfī (Nuzhat al-kulub, 259, 252; Togan,

and they export furs. He places them at 32° = 750 far-
below). Mustawfī (Nuzhat al-kulub, 259, 252; Togan,
op. cit., 204), pairs Saksīn and Bull
mosque for the Suwars, who were “also numerous.” The private residences seem to have largely been the tents of the nomads or log cabins made of pine wood. In this respect, Saksin was much like the old Khazar capital and the Volga Bulgar cities; the city was filled with foreign merchants, some, like our source, coming from the western regions of the Islamic world. In Abu Hāmid’s account, the city has a strong Muslim character. Each of its various groups had its own judges, jurists and preachers. With the exception of the Maghribis of the Malikī madhhab, all other foreigners who followed the Shafi’i school, the city was largely Muslim. In addition to the ferocious cold of the region, Abu Hāmid, in discussing the local peculiarities that might be of interest, mentions the enormous size and weight of certain types of fish caught in “the river” that are unique to that region. One such fish could only be caught by a powerful camel. Another type of fish is described as boneless, and it “is like the tail of a lamb” roasted with chicken meat. It is even better than the meat of a plump lamb. Lamp oil can be extracted from this fish as well as isinglass. Its meat could also be cured and became “the best of all the dried meats in the world.” The currency there is made of lead, of which eight Baghdad mān = 1 dinar. Sheep cost 2/3 dinar each, rams 3/4 dinar; there is also much fruit. A tassudj.;...
SAKSIN — SALA

3. Republican Turkey published a series of Türkiye’nin Hikayesi Deolet Sâl-namesi (first 3 vols. 1925-6 to 1927-8 in Arabic script; 1928-9 under the title Türkiye Cumhuriyeti Deolet Vîlihê). There were several attempts to revitalise the provincial almanacs under the name of II yuliklar (1967 and 1973).

**SAŁA,** dialectically Sla, current French and English form Salé, a town of Morocco on the Atlantic coast at the mouth of the Búragrág (older Asmır), situated on a flat, sandy stretch of land. Pre-18th century sources often mix up Sâlla, Sale and Rabat. *Sella* would mean “crag, cliff” in Punnic (though not in fact attested in extant Punnic texts) but a Phoenician past for the town is based only on hypothesis.

Ibn H̄awkal, tr. Kramers-Wiet, 78, mentions a town and some ribâts on the river of Sâlla, whilst al-Bakrī states that ʿĪsâ, the son of Idrīs II, was the ruler of the town. But this could also refer to Sâlla rather than Sâlī proper. The town was probably founded by the Banū ʿAshâra during the 5th/11th century. At first the Banū ʿAshâra were at Sâlla, but left it for the right bank of the river where they built palaces and held a court which rivalled those of the Spanish Taifas (M. Benguigui, *Anatole Banû ʿAshâra n. Ser. 4, xi [1848]), (Ebuzziya) Tewfik (1913). Ebu '1-Diya does not seem to have harmed Sâlla, whose role continued to be important; the caliphs often stayed there, whose agricultural and commercial prosperity is described by al-Idrīsī. Sâlē’s resistance to the Almohads provoked the destruction of its ramparts and the elimination of the Banû ʿAshâra, whose palace ʿAbd al-Muʿmin requisitioned. The town became a royal encampment, although if the army stopped in the region on its way to al-Andalus, it was, rather, from the Mediterranean ports that it embarked.

The re-foundation of Rabat [see RIBÂT AL-FATH] does not seem to have harmed Sâla, whose role continued to be important; the caliph often stayed there and undertook important building works: the provision of water (sîr al-aqṣaw or wall of the arches), construction or restoration of the Great Mosque, Masjīd al-Târā, which has always occupied the same place. The Marinid conquest was marked by the seizure and sack of the town by the Castilians in 658/1260; goods were pillaged and burnt and a substantial part of the population massacred. Amongst the inhabitants carried off as slaves was the kâdî, who was a descendant of the Banū ʿAshâra. The Marinid Abū Yusuf (656-85/1258-86) came to the help of the town and took part in rebuilding those walls which had not been rebuilt by the Almohads.
SALA — SALAF

Between the 5th/11th and 8th/14th centuries Salé enjoyed real prosperity. The agricultural richness of the region, and commercial and artisanal activity, are attested in the sources, and despite the mediocre standard of the port (al-Idrisi, Magribi, 85), commercial traffic was important. Oil was imported from Seville, and corn, bees' wax, hides, wool and indigo were exported (F. B. Peglotti, La pratica della mercatura, Cambridge, Mass. 1936). Ibn al-Khatib, who spent three years between 1291 and 1293 (ibid., 111), mentions the port of Sale, which was of medium size (a 'capitale per le navi e le merci').
Sala. Court of the Marinid _medersa_.

_Sala_. Court of the Marinid _medersa_.

it must also be such as to allow no advantage (manfa'āt) to accrue to the lender from his loan—but what constitutes "advantage" in what circumstances is, in fact, not a matter on which there is a consensus of juristic opinion (Saleh, 41 ff., 99; see Bibl. below).

For the sake of completeness and, more importantly, to dispel any confusion or misunderstanding that may arise in readers' minds, it should be noted that the kārd is but one of two types of loan recognised by the Shari'a. The other is the 'ārijā (or 'ārijya, the alternative preferred by Udovitch) "a loan for use which transfers the usufruct of property gratis to the borrower" (Udovitch, 106). Here the borrower's free use of the object of the loan, of which the lender retains ownership, lasts until and unless the contract is rescinded at will by either of the two parties to the agreement. To this type of loan the term salāf is, in Islamic law, technically inapplicable.

Bibliography: Lane, loc. cit. above (best consulted in conjunction with the present article and Salam); A.L. Udovitch, Partnership and profit in medieval Islam, 2 vols., Rome 1925-38, will compensate readers for this deficiency. (J.D. Latiham)

al-Salaf wa l-Khalaf (A.), lit. "the predecesors and the successors", names given to the first three generations and to the following generations of the Muslim community respectively.

It was the Sunna (q.v.) rather than the Kurān which instituted one of the most characteristic traits of the Islamic vision of history by imposing the idea a priori that this history was said to have begun with a golden age, which was said to have been inevitably followed by a period of relaxation of standards, deviation and finally of division. A saying of the Prophet—of which there exist various versions transmitted by different authorities—is accordingly very frequently cited in Islamic law as one of the sources of the manner of the Prophet's Sunna, a proof (hadith) which could establish a legal prescription binding the Community in general: this leads back to a consideration of the Companions' sayings as one of the sources quite separate from fiqh (see e.g. Ibn Kayyim al-Jawziyya, Fī 'lām al-muwakkin, Beirut 1991, iv, 90-117).

In a more general fashion, if the conception that the past model for the community is situated at some point beyond the present time is an invariable element within the Islamic conscience, its interpretation has nevertheless varied and has taken shape as two attitudes which are really antithetical to each other. The first may be described as a "confident reliance on the past": a genuine traditionalism which tends to neutralise the evolutionary effects linked with the tension created by the gap between an ideal past and a present always on this side of the ideal past. The second attitude, that of the salafiyya (q.v.), ancient and modern, on the contrary continually endeavours to update the changes—conceived as necessary alterations in relation to deviations and innovations, bid'as—believed to be necessary in view of the restoration in all respects of the ideal past (more or less freely conceived) and the gap between an ideal past and a present always on this side of the ideal past. (E. Chaumont)

Salafiyya, a neo-orthodox brand of Islamic reformism, originating in the late 19th century and centred on Egypt, aiming to regenerate Islam by a return to the tradition represented by the "pious forefathers" (al-salaf al-ṣāliḥ, hence its name) of the Primitive Faith. For definition, background, origins, doctrines and general aspects see Islam; Muhammad 'Abduh; Rashīd Rida.

1. In North Africa.
(a) Tunisia. Tunisia was the first Maghrib country to receive a reformist (though not purely salafi) message from the East. Muhammad 'Abduh visited Tunis (December-January 1885) with a view to establish there a branch of al-'Urus al-Wuhūkh secret society. He was received with some reserve by the older Zaytūna Shaykhs of the Mālikī school, but
found support among the junior Mālikī 'ulamā and the Hanafīs. Ābdūh’s second visit to Tunis (September 1903) did not improve his relations with the Zaytūnī conservatives, although he appeared with the prestige of Chief Mufti of Egypt. Facts that did not endear him to them included his insistence on the need to acquire secular knowledge besides the religious sciences and his condemnation of Sūfī quietism, fatalism and tawakkul [q.v.]; his “Transvaal Fatwa” (which permitted Muslims in a Christian country to wear a European hat and eat meat slaughtered by a kitsbah); his clash with the Zaytūnī ‘ālim Sālih al-Sharīf, with whom he accused Wahhābism (because of his sympathy with the Wahhābī drive against saint-worship); the appearance of the foremost Salafī journal al-Manār [q.v.], which a group of ultras, following Ābdūh’s visit, petitioned the Prime Minister to ban from entry the appearance of the foremost Salafī journal who accused him of Wahhabism (because of his symbiosis with the Zaytūnī and the(Http.); with the Young Men’s Muslim Association (YUMA) and the very popular but shortlived Society for the Preservation and Teaching of the Kur‘ān (for adults). Yet the Tunisian Salafīs, unlike their Algerian counterparts, did not succeed in creating a durable organisation with a recognised leadership and action programme. They showed the people a middle road between the mediaeval synthesis and westernisation, but had no answer for the urgent needs of the social and political life. Whether the current fundamentalist (or “Islamist”) movement (MTI), which traces its roots back to the Kur‘ānic Preservation Society (formed at the Zaytūnī in 1970, cf. S. Waltz, Islamism appeal in Tunisia, in MEJ, xI [1986], 652), should be regarded as an avatar of the Salafīyya has not yet been definitely established.

(b) Algeria. Of all the Maghrib countries, it was Algeria where Salafism reformism found its fullest and most effective expression and response. Perhaps the main reasons of its success, apart from the quality of its leadership, were that it was here that the danger to Algerian national identity, personality and soul, from Islamic religion, ethics and way of life, and to classical Arabic language and culture was felt to be the greatest. This threefold threat was implicit in Algeria’s colonial situation—her ambiguous status of being legally part of France but in fact a colony of massive European settlement which uprooted and
proletarianised its native peasantry, forcing large numbers to emigrate to France, transforming its economy and creating a thin layer of gallicised évolues who were taught "nous ancêtres les Gaulois" and aspired to complete political and cultural (but not religious) identification with France.

The emergence of the Salafiyya in Algeria is usually seen as a consequence of 'Abdul's visit to Algiers (and Constantine), August-September 1903. According to R. Bencheneb, the persons who met him represented three trends of the Algerian élite: the conservatives, the modernists and those of French civil status.

Prominent among the first-named were three professors of official madrasas, 'Abd al-Kâdir al-Madjdjâwî, who taught Arabic and Islamic Law at Algiers, was active in the Algerian nahda and wrote against social ills, superstitions and old customs; 'Abd al-Halîm b. Smâyâ, noted advocate of 'Islamic nationalism' ('kâumiyâa al-Islâmîyya), in close touch with Cairo and Istanbul, host of 'Abdul's visit in Algiers and campaigner in 1911 against conscription into the French army; and Muh. Sa'îd b. Ahmad al-Zawwâî, surnamed "Ibnu Zekrî", a ûziyya-bred Kabyle scholar and imâm of a mosque, who published in 1904 a pamphlet insisting on the need of ûziyya reform in Kabylia and denouncing customary laws that disad-
vantaged the Kabyle woman. To the same trend be-
longed two Constantinian Sîms, Hamdân al-Wantsî, teacher and mentor of Ibn Bâdis [q.v.], and Mawîlî b. Mawîlî al-Ḥâfîzî, real leader of the conservatives, long-time Mufti of Constantine, partisan of progress and reform, open to modern science and European ideas. For Merad (1967, 126), his reformism consisted in improvement of the moral and intellectual condi-
tion of Algerian Muslims without judging them for their beliefs, whether maraboutic or other. The French-assimilated modernists dismissed the conserva-
atives as "old turbans", arrogant bourgeois, great feudals, selfish, lazy and corrupt, whose attachment to tradition impeded progress and merger.

'Abdul's visit, though brief, made a strong and lasting impression. He appeared as an educator and missionary of faith, hope and effort, he showed the Algerian intelligentsia what it was looking for: the possibility of reconciling religion and progress, tradition and renewal, while safeguarding their national identity. Whether he also conveyed a political message has been both suggested (Merad, 1964) and denied (Bencheneb 1981, 131). It took, however, a decade for the fruits of 'Abdul's visit to become visi-
ble. In 1913 there appeared at Algiers two Arabic weeklies, al-Farîq and Dhu 'l-Fakhr, both of expressly 'Abdulhist inspiration and non-political. Their aim was twofold: to publicise 'Abdul's teachings and to criticise the religious situation in Algeria, chiefly the Sûfî orders and marabouts, popular superstitions and vices. A special target was the religious rôle of the local Jews. Both were suspended by 1915, but al-Farîq reappeared in 1921.

A decade later, the diffuse Salafi trends begin to take shape again with the publication of al-Munâshid (July 1923), suspended and replaced shortly after by al-Qâhid (December 1925, first weekly, then monthly). The third and most successful of this founder and editor, the Constantinian Sîmî 'Abd al-
Hamîd Ibn Bâdis [q.v.], and see 184], as well as the qualities of his collaborators, it became in the 1930s the most prestigious tribune of the Maghribi Salafiyah (it was dubbed "the Manâr of the Maghrib"), until its cessation by the end of 1939.

The team assembled by Ibn Bâdis comprised a number of persons, most of whom shared a common "homeground"—the Province of Constantine—a period of study at the Zaytûna and (some of them) a stay of up to 10 years in the East, but they differed greatly in background, skills and temperament (see on these persons, Merad, 1967, 79-118). Six years later, this team became the nucleus of the Association of Algerian Muslim 'ulamâ? (Djam'iyyat al-ulamâ? al-muslimin al-djazîriyyin = AUMA) (1931). Its aims, as stated in the statutes, were to be purely religious, moral and cultural; all political discussion or inter-
ference in political systems or policies were strin-
tely forbidden. There ensued a struggle for dominance be-
 tween the Salafis and marabouts in which the former prevailed, but the latter, led by Hâfîzî, set up a rival anti-reformist organisation which they called Djam'iyyat al-ulamâ? al-sunna al-djazîriyyin = AUSA (1932), the addition of the word sunna implying that their adversaries had become tainted by heresy in co-
 opting to their committee a representative of the Ibâdiyya [q.v.], Ibhrîm Bayîyûd. There followed a year of bitter polemics between the two camps, which exposed the intrinsic weakness of the marabouts, their intellectual poverty, their moral decay and inability to evolve and meet the challenge of the times. They were on the whole unable, in spite of their numbers, well-
knit framework, widespread ramifications, monastic discipline and economic strength, to devise effective long-range counter-measures to withstand the Salafi onslaught, and had to depend on the initiative, sup-
port and guidance of the French Administration, which did not enhance their prestige.

A second target of the Salafi reformists was the class of official ministers of the cult, or Muslim "clergy". In 1934-5 they numbered 385 (22 muftis, 159 imams and 204 others. Merad, 1967, 418). Since political dependability (i.e. loyalty and docility) were often given precedence over professional aptitude and moral integrity, the religious civil service as a whole lost in the course of time most of its credit in the public eye. Both sides, however, refrained as a rule from direct attacks on each other. The two major charges which the official "clergy" proffered against the Salafiyya were separatism (from France) and Wahhâbism.

Apart from the upper hand gained by the Reformists over the marabouts, a number of events facilitated or marked the progress of the former during the 1930s: (a) Muslim resentment over the triumphant centennial celebrations of the French con-
quest of Algiers (1930); (b) the initially benevolent at-
titude of the anti-maraboutic director of Native Af-
fairs, Jean Mirante, towards the Reformists. (c) the AUMA-Administration crisis of 1933-4 following the ban on unlicensed (i.e. Reformist) preaching in the mosques and on Reformist teaching in a number of free schools, further widened popular sup-
port for the Reformists; (d) the paradoxical alliance of the Reformists with the assimilationist Fédération des Élus, led by Dr. Bendjelloul and Farhat 'Abbas, for electoral purposes; (e) the bloody anti-Jewish riots of Constantine (3-5 August 1934); the fact that these riots occurred in the very centre of Salafi reformism and home-town of Imam Bâdis, cast a strong spell on the latter but redounded to his advantage thanks to his rôle as a restorer of intercommunal peace; (f) the first Reformist congress, held at Algiers in September 1935, enabled the AUMA to take stock and appear as a political and national force in Algerian public; (g) the central rôle played by the Reformists in the preparation and conduct of the Islamic Congress of Algiers (June 1936), convened with a view to adopt
and present to the Popular Front Government the combined demands of the three main participants: Elus, Reformists and Communists (Marabouts and the Popular Front = PPA), was not invited, but he attended nevertheless. The demands of the Reformists included: preservation of the Muslim personal status, reorganisation of the judicial systems, separation of Religion and State (i.e. independence of the Muslim cult), restitution of all religious buildings and control of wakf revenues, and abolition of all discrimination regarding the Arabic language.

The congress delegation was well received in Paris, but a telegram disavowing it, sent by the Malikî vice-Grand Mufti of Algiers, Mahmûd Ben Dâli (dubbed Kahbûl) and others to the Premier Léon Blum, had serious consequences: on 2 August the Mufti was murdered and the assassin pointed to the Reformist leader. The principal means of violence and to their bourgeois origin and culture. It could thus be said, as late as 1977, that the regime "completely controlled the religious field" (B. Etienne, L’Algérie, cultures et révolution, Paris 1977, 118-43). Fifteen years later, this statement seems no longer true. The influence of the Islamic revolution in Iran and elsewhere, the ever-deepening economic and social crisis in Algeria, with a one-party army-controlled régime unable to cope with it effectively, and a belated attempt at democratisation made by President Ben-Djedîd—all these factors combined seemed to make the top of nearly seventy years of exposure to Salafî reformism may explain the landslide victory of the fundamentalist Islamic Front of Salvation (FIS) and its allies in the first round of the general elections (January 1992). The refusal of the army to accept the verdict of the polls, and its resolve to use force instead of accommodation, have created a sanguinary confrontation whose outcome still lies in the future.

Apart from the record of Salafî reformism in politics, it achieved quite remarkable results in its proper spheres of activity, sc. religion, culture and ethics, which provided the spiritual foundation of Algerian nationalism. By 1958 the AUMA had an estimated 10,000 active members, and 100,000 (?) sympathetic, divided in 126 sections, 34 cercles and 70 communautés cultuelles. It enjoyed wide support in the representative bodies of Algeria down to village jama’as and even more in the Association of North African Muslim Students (AEMNA), had made converts among the graduates of official madrasas and French schools, even among mukaddams of certain zauyjas, had penetrated the AWRâs massîf, stronghold of maraboutism, the Sûmmâm valley and the Saharan fringes (Laghbouât, Sûf). The principal means of
Salafi-Reformist indoctrination were the free school, the mosque and the press. The number of free schools grew between 1925 and 1933, especially in the provinces of Constantine, the “home-ground” of Ibn Badis and his team. For the year 1934-5 Merad (1967: 338) gives the figure of 70 schools, each consisting of one or two classes, totalling a hundred classes with 30,000 pupils of both sexes. According to a later estimate, there were by 1958 181 schools with 40,000 pupils, of which 123 were Reformist Kur’ânic schools and 58 from madrasas opening a primary education to 11,000 pupils. Classes were held 272 days annually (as against 157 days in French schools). In addition there was the Ben-Bâdis Institute (secondary school level, opened in 1947) with 700 students. Most schools served also as local branches of the AUMA and clubs for Reformist youth. In their curricula the emphasis was heavily on classical Arabic (spoken Arabic and Berber were banned), Kur’ân with relevant commentary, some hadîth, some fiqh, history of the Arabs (chiefly the period of the Prophet and the Rashidun caliphs) and of Algeria, with a view to foster national pride and an aspiration to renew their pristine glories. Important items were Algerian patriotic songs and the formula-creed: Islam is my religion, Arabic is my language, Algeria is my fatherland (uwâjâtî).

Next to teaching, the Salafis’salamâ, tried to infuse new life into the preacher’s art, which had become a purely mechanical affair, divorced from reality and the needs of the people. Three of them stand out as orators: Ibn Badis, Ibrahîmi and ʻUkbî, who greatly differed in style, but they all captivated their audiences by their excellent command of classical Arabic, their missionary zeal and the novelty of their message.

As to the press, the Algerian Arabic papers, like their Middle Eastern counterparts [see qâbîsî], suffered from a number of handicaps and shortcomings: they were published by amateurs, their financial resources were precarious, their technical equipment rudimentary, their readership restricted owing to high illiteracy, their very existence in constant danger of suspension. Few had a lifespan of more than 10 years. They were the veteran conservative Nadîkh, the Salafist ʻAbd al-ʻUzb, the ʻAlîwî Balâgh and the neo- ʻAbd al-Rasîdî nadîkh since 1925, especially in the pro-independence days, the Salafist organs could attain their goal, as theirs was a press of opinion, not of information. Apart from Islam, Arabic and Algerian national identity, two themes were of major concern to them: (1) Salafist ethics, or “moral rearmament”; and (2) the “struggle for the past” or their vision of history.

The re-evaluation of Islamic ethics by the Algerian reformists, like that of the eastern Salafists, stemmed from a poignant realisation of the contrast between the present state of subjection to an infidel power and Arab might and glory in the days of the Salaf. The call was therefore for a revival of those vital moral forces that had led the Arabs to greatness but had lain dormant for centuries under the influence of Şûfî ethics, with its emphasis on contempt of the dunyâ, unconcern with the mirror and future, fatalism, quietism and passive acceptance of things as they were. In order for a change to occur, the Muslim must return to a pure, strictly unitarian belief in God and trust in destiny, the fruit of a scrupulous observance of ritual, which in turn foster vitality, energy, willpower, self-reliance, activity, work, movement and speed (value of time), resolve, effort, perseverance and constancy, ambition, quest of fame, hope—all of which become key-words in the Reformist lexicon.

In the domain of social ethics, the Reformist efforts did not extend beyond the fostering of qualities making for social cohesion and the combating of certain vices, such as prostitution, alcoholism and gambling—made doubly hateful because of the Kur’ânic ban and the influence of the Europeans on their spreading. They also campaigned against customs proscribed by Wahhâbi-Salafi puritanism, such as ruinous spending on weddings and other celebrations, noisy funerals and popular bid’as relating to saint-worship. Social reform in the modern acceptance was none of their concern. They preferred to keep it off the agenda, because they did not actually oppose it, as they did in all major questions relating to women’s liberation, such as the veil, polygamy, divorce and inheritance (as did Raqîdî Rîdâ). This cautious stance may be explained by the strong conservatism of Maghribi society, the bourgeois background of Ibn Badis, the conviction that social justice was provided by the Kur’ân and the Share’a, the desire to safeguard the traditional structure of the Algerian family as the last bulwark of Islam against the disruptive influences of the West and last, but perhaps not least, dependence for financial support on the well-to-do classes (as suggested by Merad, 1967, 304).

Reformist history writing (Mîlî, Madañî, Fâsî; see Shinar, 1971) was guided by several basic assumptions: there have existed a polarity and a dichotomy between East and West since the dawn of history; the East is superior to the West in spiritual values, ethics and original culture; the ways of the West, spearheaded by Rome and the Latin heirs of their imperial traditions, are domination, oppression and exploitation; the Mâghrib is part of the Semitic East by origins, spirit and culture; the Berbers, already Semiticised by the Phoenicians, merged with the Arabs into one nation through Islam and the Arabic language, stood up to every conqueror and proved their capacity to establish one of the greatest states in the world; Algeria had and still has her own national identity and history, despite Western efforts to dilute and obliterate them. Her history is illustrated by the following figures and dynasties: Jugurtha the Numidian, Rome’s greatest foe (see M.-Ch. Sahli, Le message de Jugurtha, Algiers 1947); ʻUkba b. Nâîf, Arab conqueror of the Mâghrib for Islam, buried in Algerian soil; the Rustamid (q.v.) imâmât of Tâhât (despite its being heretical Khârijidî); ʻAbd al-Mu’min al-Madînî (q.v.), the real founder of the Almohad caliphate; and the ʻAbd al-Wâdîd (q.v.) dynasty of Tîlîmân (Tiemen). Even the Banû Hilâl (q.v.), whose invasion of the Mâghrib had been described since Ibn Khaldûn as the greatest catastrophe to befall the region in the Middle Ages, is seen by the Reformists as a blessing in disguise, because it permanently fixed its Arab character. The latest hero has been ʻAbd al-Kâdir b. Mûbayî al-Dîn (q.v.), champion of Algerian resistance to the French.

existence of the latter was a historic fact, so they could dedicate themselves to the other major goals of Salafi reformism: the eradication of saint worship, especially the pilgrimages to saints' tombs with their attendant beliefs and practices of the lower Sufi orders, and the reform of the traditional educational system in 'Abduh's spirit. In addition, they campaigned against extravagant and ruinous wedding celebrations. A theme that came last to the fore, but then with dramatic effect, was France's Berber policy. In their drive against maraboutism the Salafis were preceded by two Wahhabî-inspired sultans, Sidi Muhammad b. 'Abd Allâh and his son Mawlîy Sâlûmân [see 'alâwî]. The latter's anti-maraboutic "pastoral letter" (1811) involved him in a military struggle with the maraboutic establishment that nearly swept away the dynasty (1822). His immediate successors adopted a more cautious policy, but in May 1909 Mawlîy 'Abd al-Ḥâfîz, a strong Salafi sympathiser (he wrote a refutation of Ţîdânî claims) put an end to the zaîrîs, of the Idrîsî sharîf Muhammad al-Kabîr b. 'Abd al-Wâhâb al-Kattânî, chief of the Kattânîyya order and leader of the clerical opposition to the French. Al-Kattânî was suspected of plotting to overthrow the reigning dynasty and restore the Idrîsî one (E. Michaux-Bellaire, in RMM, v [1908], 393-423, and Laroui 1980, 405). The next sultan, Mawlîy Yûsûf, continued the same line. In 1924 the Council of 'Ulamâ', at his behest, decided to burn all writings of the Ţîdânî writer Muhammad al-Nâdîfî. In 1933, his son and successor Sîdî Muhammad b. Yûsûf banned all manifestations of the 'Ishâwî order, and in 1946 he prohibited the founding of new orders or opening of new zaîrîs without prior permission. Even Muhammad b. 'Abd al-Kârim, leader of the Rif War (1921-6) espoused the Salafi ideology and tried to spread it in the Rif [g.a.] in order to bolster Rifî morale and counteract the defeatist propaganda of some Sûfî orders, burning, as a reprisal, two of their zaîrîs (Shinâr 1965, 169 ff.). This attitude of the orders was branded as treason by the Young Moroccans and deepened their enmity towards the entire Sûfî establishment. After the Rif War, their chief maraboutic target became the new head of the Kattânîyya, al-Ḥâḍîj b. 'Abd al-Ḥâfîz al-Kattânî. First signs of an anti-maraboutic trend among Moroccan intellectuals appear in the second half of the 19th century: the historian Ahmad b. Khâlid al-Nâşîrî al-Sâliwî (d. 1897 [g.r.]), who declared himself an enemy of pilgrimages to saints' tombs (mawâsîm) (E. Lévi-Provençal, Hist. des Chorfa, Paris 1922, 568), and 'Abd Allâh b. Idrîs al-Sanûsî, ulamâ'î of the Karâwîyîn and member of the Royal Council under Mawlîy Hasan (1873-1894), who brought back some Salafi ideas from his travels in the East and tried to propagate them in Morocco, but with little success. Far more effective was the action led by Abû Shû'ây b. 'Abd al-Raḥmân al-Dukkâlî, dubbed "the Moroccan 'Abduh" (1873-1937). He studied at the Azhar around 1900, became Vizier of Justice, taught 'Abduh's doctrine at the Karâwîyîn and in Rabâţ, left again for the East after 1912, expounded 'Abduh's teachings at Mecca and befriended Rahulî Ǧûdî and the famous drusi Mânaî al-Ǧarî'î ("the true Arabî"), the Druze amîr Ǧûdîbâr Arâlân. After the First World War, he returned to Morocco and toured the country with a group of followers, preaching, falling sacred trees and smashing sacred stones. His eloquence and charisma earned him a wide following. Among his disciples the most militant were (a) Muhammad Ǧâdîzî, a native of Mînkân (Meknès) who
clashed with 'Abd al-Hāy al-Kattānī (see above) in 1920, was expelled from the Karawīyīn in 1923 and founded a "free school" in 1926. He was noted as a nationalist poet and fākīh; and (b) ʿAllāl al-Fāṭī (1907–74 [q.v. in Suppl.]), ʿulīm, of the Karawīyīn, fervent patriot, poet and teacher, became the foremost nationalist leader from 1929 onwards, thus embodying in his person the transition from Salafiyya to nationalism. The philosopher M.ʿA. Lahbabi (Du clos à l’ouvert, Casablanca 1961, 65) calls him the "theorist of the Salafiyya", by virtue of his book, Self-criticism (Al-Abdalīl, Casablanca 1952).

Similar groups to those of Rabat and Fās were formed at Marrākūsh, Tiṭṭāwīn and Tānjādīn. In the two latter towns, Salafi activity centred around Muhammad Dāwūd, historian of Tiṭṭāwīn, and the Benūnī family, whose head, Āl-Hādżīdī ʿAbd al-Sālam, ex-Vizier of Justice, was dubbed "Father of Moroccan nationalism".

Finally, there must be mentioned the Islamic activist Muhammad Makkī al-Nāṣirīn, scholar of a noted Rabātī family (b. 1904). He studied in Cairo, returned to Morocco in 1927, was expelled in 1930 following his campaign against the Berber Dāhir and presented an indictment sheet against France’s Berber policy to the pan-Islamic congress of Jerusalem (December 1931). In 1937 he founded and led the Moroccan Unity Party (PUM). For his early reformist thinking we owe to him Tābir al-hakīma wa-l-iblaḏī al-Qur’ānī, which called for a reform of Muslim society by a return to true ʿUṣūlīm based on practical ethics (see L. Massignon, in REI, i [1927], 33).

The other major field of Salafi activity was the reform of the educational system, more especially the establishment of "free schools" (madārīs hurra), also called "renovated Kur’ānī schools". The Salafīs were neither the first nor the only ones to create them. J. Damis distinguishes four categories among the "founding fathers" and patronage committees: merchants, Salafīs, ʿulamāʾ fiṣḥakāh and members of some Sūfī orders. They shared an awareness of the backwardness of the traditional Kur’ānī school (mīṣīd), the example of reformed schools in the East (Egypt and Syria), a cultural nationalism and a moral reservation with regards to the public school with its emphasis on French and modern subjects and its secularism. By the 1930s, at the expense of Arabic, Kur’ānī and Islam. Yet they were influenced by the public school in matters of organisation, management, methodology and equipment. The first free schools opened in 1919 in Rabāt, Fās and Tiṭṭāwīn. By the late 1940s there were 121 free schools with 14 annexes and 26,800 students. The teaching staff came mostly from the Karawīyīn and the pupils from the urban middle class. Their curricula varied. Thus the Bū-Hlāl school (Rabāt 1918) claimed to offer courses in modern sciences, history, geography, French and gymnastics, while the Marrākūsh school (1952) taught mainly Kur’ān, Arabic grammar, some fīḥk, arithmetic and French. The overall effect of the free school in Morocco was that it served as a retractor against French culture, a vehicle of modern Arabic culture, a precursor and (later) auxiliary of Moroccan nationalism, and a promoter of, and (later) brake on, secularisation and modernisation.

The importance of the Salafiyya in Morocco has been variously assessed. E. Derrmenghem, a keen and sympathetic observer of Maǧribī Islam, marvelled in 1933 at the speed with which the Salafiyya had succeeded in drastically reducing the influence of the marabouts (al-Fāsi, 1948, 155). ʿA. Laroui, the Moroccan cultural historian, holds that from 1912 to 1925, Salafīm had become the common ideology of the sultan, the central mağhīrīm, the Fāsi ʿulamāʾ and the bourgeoisie, had rendered exclusive the sultan’s religious authority, had inspired Bin ʿAbd al-Kārīm’s reform drive against local Berber custom (yet failed to win the support of the marabouts), with its methodology serving all schools of thought and all interest groups (Laroui 1980, 428-9). The Moroccan philosopher M.ʿA. Lahbabi (al-Habbābī), on the other hand, finds that despite all its efforts and successes, the results of Salafī action were disappointing, owing to the upward trend engendered by the industrialisation of the modern Moroccan cities (Du clos à l’ouvert, Casablanca 1961, 65).

The early history of the Salafiyya in both Egypt and Syria (in the sense of Bīlād al-Šam, Greater Syria) is closely connected. Muhammad ʿAbdūh’s [q.v.] stay in Beirut (1882-8, with lengthy interruptions) gave him the opportunity to make some of the ʿulamāʾ; civil servants and intellectuals there familiar with his own and with al-Afghānī’s [q.v.] ideas about the necessity and the contents of a reform of Islam [see ISLĀM, and also Delanouë, in Bibl.].

Some years later, a considerable number of Syrian adherents and spokesmen of the Salafiyya, among them Tāhir al-Dījaʿātīrī and Dīḥām al-Dīn al-Kāsīmī (see below), travelled to Egypt. Some of them stayed there for a considerable length of time, some even taking up domicile in Egypt permanently and influencing, by their activities as publicists and in other ways, the discussion of Islamic reform, even far beyond Syria and Egypt.

Notwithstanding this mutual influence between Syrian and Egyptian Salafīs, manifesting itself, among other things, by lively correspondence, reciprocal visits, lecture tours, letters to the editor and book reviews, encounters at Pan-Islamic congresses [see MUṭTAMAR etc.], the Salafiyya attained in each
region a certain degree of distinct and independent development. This was the case e.g. regarding some particular phases of Islamic history, and also with regard to the historical role of the muḥājirūn. With individual authors, these differences might reach from nuances to clear divergences. But the basic positions of the Salafiyya in Egypt and in Syria are to a large extent the same [see ISLĀM, esp. C. The principal doctrinal positions].

(a) EGYPT. The origin and early development of the Salafiyya in Egypt is often connected with the names of Abū Qurān, `Abd al-Qarīn, the Kawakiblī and Rashīd Rida [q.v.]. With al-Manār [q.v.], the last mentioned created in Cairo in 1898 the most influential organ of the Salafiyya. From 1926 onwards, al-Manār was joined by al-Fath (Cairo), a periodical of the Salafiyya, and al-Djundi (Cairo 1977). In the discussion about the authenticity of hadīth literature, which had flared up because of the link of orientalist writings, the authors of the Salafiyya also took sides fervently (see G.H.A. Juynboll, The authenticity of the Tradition literature. Discussions in modern Egypt, Leiden 1969).

In principle, the Salafiyya in Egypt was and has remained oriented towards Pan-Islamism [q.v.]. On the other hand, some of its authors showed already in the 1920s, and even more so during the following two decades, a tendency towards blending Islam and Arab nationalism [see JAWMĀ]. In 1936, for instance, the “Arab socialism”, were very narrowly prescribed. The government reacted very harshly indeed at alleged or real conspiracies, as was clearly shown by the execution of Sayyid Kujbā [q.v.].

During the first two years after the “Free Officers” had seized power in 1952, the Salafiyya in Egypt had relatively favourable possibilities to develop. However, already at that time internal differences of opinion about specific questions became visible, for instance in the appraisal of hereditary monarchy and its role in the history of Islam (Ende, 99-103). After the Muslim Brotherhood had been banned in 1954, the public influence of the Salafiyya became in the 1960s, and its followers left the country (mainly to Saudi Arabia and Kuwait). However, individual Salafis such as Shaykh Muhammad al-Ghazālī and Mahmūd Muhammad Shākir occasionally found the opportunity to express themselves in books or journals (e.g. in al-Risālā), for instance, in connection with the repeated campaigns of the government against the Marxist Left. Many writings of earlier or contemporary Salafiyya authors also appeared to be appropriate for providing a religious-legal justification for “Arab socialism” which was propagated by the State [see ISLĀM]. For this reason, a description of Islamic socialism by the leader of the Syrian Muslim Brotherhood, Muṣṭafā al-Sibā‘ī (d. 1964) could also be published in Cairo (Iṣrā‘iṣrā‘īlīyāt al-islām, 1Damascus 1939, 2Damascus and Cairo 1960, 3Cairo and Kuwait d. in this direction). However, this is only an apparent case of “Arab socialism” often presented in works of literature on the tradition of the Salafiyya, as was the case with Sami A. Hanna and G.H. Gardner, Arab socialism, Leiden 1969, esp. 149-71).

Some authors made it their aim to attack incessantly certain writers whom they considered as particularly dangerous representatives of secularisation and westernisation. A favourite target of their criticism was Tāhā Ḥusayn [q.v.], and they regard the term as a man of letters, literary critic, historian of early Islam and cultural policy-maker (see e.g. Muṣṭafā Sa‘dīl al-Raṣīfī, Tahtā rāyat al-Kurān, ‘Cairo 1962, 1974; An-war al-Djundī, Tāhā Ḥusayn, hāyātuhu wa-fikrīruh fi masān al-islām, ‘Cairo 1977). In the discussion about the authenticity of hadīth literature, which had flared up because of the link of orientalist writings, the authors of the Salafiyya also took sides fervently (see G.H.A. Juynboll, The authenticity of the Tradition literature. Discussions in modern Egypt, Leiden 1969).

In principle, the Salafiyya in Egypt was and has remained oriented towards Pan-Islamism [q.v.]. On the other hand, some of its authors showed already in the 1920s, and even more so during the following two decades, a tendency towards blending Islam and Arab nationalism [see JAWMĀ]. In 1936, for instance, the “Arab socialism”, were very narrowly prescribed. The government reacted very harshly indeed at alleged or real conspiracies, as was clearly shown by the execution of Sayyid Kujbā [q.v.].
After the war of June 1967, and even more so after the death of Djamal cAbd al-Nasir in 1970, the ideas of the Salafiyya or of the Neo-Salafiyya (see above) saw a new boost in connection with the revival of the ancient militant organisations and the emergence of new ones (see the studies by Carré, Jensen and Kepel, mentioned in the Bibli.).

(b) Syria. The origins of the Salafiyya in Syria are connected with the names of Tahir al-Djaza‘iri and Djamal al-Din al-Kasimi in the first place. The circle of friends and disciples which formed around al-Djaza‘iri directly or indirectly influenced almost all the Syrian Salafiyya authors who after the First World War became prominent in Syria. Having sought the support of the Ottoman Turkish reformers and, from 1908 onwards, of the Young Turks in particular, most of the Syrian Salafiyya, already from 1909-10 onwards turned to Arab nationalism (see Commins, 124 ff.). Many of them played a role in the Arab clubs and movements of the time (including the secession into a rival movement, and in agreement with the sympathies of the Sunni Muslim intellectuals who after the First World War saw a new boost in connection with the revival of the militant Neo-Salafiyya of Syria and their disciples to glorify the empire of the Ottomans, with whom Tahir was in close contact, especially in the years 1906-7, proceeded from 1880 onwards, engaged in building up a modern educational system in Syria (between 1879-83 as general supervisor for the elementary schools). From 1880 onwards, the above-mentioned circle of friends and disciples (halqa) began to form around him. Between 1907-19 Shaykh Tahir lived in exile in Egypt. He died in Damascus in January 1920. Among his achievements are counted, among other things, the foundation (or new arrangement) of the Zahiriyah library in Damascus and of the Khalidiyya library in Jerusalem.

Shaykh Tahir's publications consist mainly of textbooks for the state schools. They reflect his religious-reformist ideas only indirectly. He preferred to express and discuss his thoughts in his halqa. Djamal al-Din al-Kasimi (1866-1914), with whom Tahir was in close contact, especially in the years 1906-7, proceeded differently. In most of his works (several of them have been published only posthumously) we meet al-Kasimi as a resolute reformer (see the list of his writings, with commentary, in Zahir al-Kasimi, 632-88). His repeated criticism of lailat and of the rigid adherence to the four Sunni schools of law (al-tasweq li ‘l-madhhab) laid him open to the accusation that he wished to found his own madhhab. The discussion he triggered on the advantages or dangers of l-madhabiyya is going on in Syria until the present day (Wild, ‘l-madhab und Madhab: cf. Muhammad Sa‘id Rama‘dan al-Bu‘fi, al-Salafiyya, marhala zamaniyya mubakara, ‘l-madhab, idem, 1990).

From its beginning, the Syrian Salafiyya has never formed an ideologically homogeneous bloc. Rather, one recognises in individual representatives of the movement quite different positions about particular questions. However, their criticism of many forms of tasawwuf, as well as of many popular religious customs and notions, inspired by Ibn Taymiyya (q.v.) and his school, is more or less uniform. Examples are ‘Abd al-Hamid al-Zahravi’s al-Fihh wa ‘l-tasawwuf (Cairo 1901) and al-Kasimi’s l-Saba‘i al-madhab was sa‘add wa ‘l-tasaww‘ad (Cairo 1923, Beirut 1970). Likewise in the tradition of Ibn Taymiyya and the neo-Hanbali school and in agreement with the sympathies of the Salafiyya for the Wahhabiyya is the generally critical appraisal of the Shafi‘ and its role in Islamic history, though not all Syrian Salafis are uniformly severe in their judgment (Laoust, Isisai, index, 729; Ende, 1975, 58-75; Commins, 84-95). In the same context belongs the endeavour of some Syrian Salafiyya authors to defend it against accusations by many historians and other authors of the past (Ende, esp. 64-75, 91 ff.). It was above all Muhammad Kurd ‘Ali (see KURD ‘ALI) who distinguished himself in this respect and who made it possible that this and other positions of the Salafiyya could be represented in their publications of the Arab Academy of Damascus, founded and directed by him for many years (see MADJMA ‘ULAM‘A. 2a. Syria) (Hermann, esp. 207 ff.).

The ‘Arabisation of Islam’, which can be observed later in the Egyptian Salafiyya (see above), is in part characterised by arguments which, already before the First World War, were discussed by members of the Syrian Salafiyya and have been propagated in Egypt by such authors as Mustapha al-Din al-Khalil, a disciple of Tahir al-Djaza‘iri.

As in Egypt, the ideas of the Salafiyya have been taken up and converted into political action by radical Muslim organisations also in Syria. This holds true in the first place for the Muslim Brotherhood which in the middle of the 1940s emerged from the fusion of several Islamic societies. The leaders of the Brotherhood, above all Mustafâ al-Siba’si, Ma‘rûf al-Dawâ‘elî and Muhammad al-Mubarak, found over several years the opportunity to make their ideas public in journals such as al-Muslimîn and al-Tamadûdan ‘l-islami. Having been banned for the first time in 1952, the Muslim Brotherhood and similar organisations of the militant Neo-Salafiyya of Syria have been suppressed in various degrees and at times persecuted with great harshness. Many of their members have had to travel to such countries as Jordan and Saudi Arabia (see Reissner, Carré-Michaud and Abdallah).

Bibliography (in addition to references given in the article):

Salafiyya — Salah Abd al-Sabur

2. On Salafiyya in Syria, H. Laoust, Essai sur les doctrines sociales et politiques de Taha al-Din Ahmad b. Taimiya, Cairo 1939; Zafir al-Kasimi, Djamal al-Din al-Kasimi wa-'tsasruhu, Damascus 1965; ‘Adnan al-Khafif, al-Shaykh Tahir al-Qazzarri, raf‘ al-nahda al-'ilmiyya fi bilad al-Sum wa-al-dam min khirritid madrasati, Cairo 1971; G. Delanoue, Endocriminalité religieuse et idéologie ottomane: l’adresse de Taha al-Din et l’appel aux réalisations (al-Nas, 55-8). This is because he was aware of the importance of using enjambement (tatimin) between the verses, a poetic technique which was considered a fault (‘qib) in classical poetry. However, there are also clear influences in the motives and images, and even in wording, from Eliot’s “The wasteland,” “The hollow men,” and “The love song of J. Alfred Prufrock,” upon Salah’s poetry, which was published in several other anthologies.

In drama, Salah was among the leading Arab writers of plays in blank verse. He was acquainted with dramatic literature through reading the plays of Tawfik al-Hakim and ‘Ali Ahmad Bakkar in Arabic, and of Shakespeare, Oscar Wilde and Bernard Shaw and Greek drama in English, though he did not see any play performed on stage till he came to Cairo at the age of twenty.

His dramas deal with the tyranny and oppression exercised by the authorities and the responsibility of art and literature towards social institutions. His characters are engaged tragic heroes or cowardly conspirators who betray their values and join forces with the authorities. However, being a talented poet, his poetic style and images save him from direct and prosaic expression. His first drama, Ma‘amat al-Halalad (“The tragedy of al-Hallad”) (1964), bears the influence of Greek tragedy. The play deals with the engagement of the intellectual in a historical frame, putting forward the view that al-Hallad [q.v.] was crucified in consequence of what were considered revolutionary action, blasphemous ideas and utterances, as in the cases of Socrates and Jesus. There are clear influences from Eliot’s “Murder in the Cathedral” upon this play, especially in the motives of martyrdom, justice, and the struggle between the state and the religious authorities.

The second play by Salah ‘Abd al-Sabur is Musafir layl (“Traveller at night”) (1969), in which he depicted the role of social and political institutions in destroying the individual. In his third play, al-Amira tanazir (“The Princess is waiting”) (1969), he dealt with the idolising of leaders; while in his fourth play, Layla wa l-maghar (“Layla and the madman”) (1970), he was concerned with poverty, the oppression of women and the spiritual emptiness and impotency of intellectuals in Egypt before the revolution of 1952, which was crucified in consequence of what were considered revolutionary action, blasphemous ideas and utterances, as in the cases of Socrates and Jesus. There are clear influences from Eliot’s “Murder in the Cathedral” upon this play, especially in the motives of martyrdom, justice, and the struggle between the state and the religious authorities.

In his youth, Salah was influenced by the poets of the Mahdjjar [q.v.]. In his spiritual autobiography Haydaj fi Tafir (“My life in poetry”) he revealed his theory of poems which was developed under the influence of Plato, Aristotle and Nietzsche, giving his own interpretation; thus he claimed that Aristotle’s catharsis takes place at the time of the creative process and that it does not only purify the soul from fear and pity but also from the emotion of revenge.

Salah ‘Abd al-Sabur wrote, beside his four translations of books by Ihsen, Eliot and Lorca, several collections of articles in which he discussed his ideas and theories on literature, politics, society and arts, as well as European and American theatre and literature, all presented in a clear and elegant style, in such collections as ‘Awqal al-Qar (“The voices of the age”) (1961) (on European and American literature and theatre); Maghda yakhda minhum li-l-tarik (“Which memory will they leave after their death?”) (1962) (studies on the achievements of Taha Husayn, al-Akkad, Tawfik al-Hakim and al-Mazini); and several others.

SAHĒL AL-DIN, AL-AIMI-L AL-NĀSIR ABU 'ALI, YUSUF B. AYYŪB (SALADIN), the founder of the dynasty of the Ayūbīds [q. e.], and the champion of the djihād against the Crusaders (born 532/1138, died 589/1193).

SAHĒL AL-DIN, AL-AIMI-L AL-NĀSIR ABU 'ALI, YUSUF B. AYYŪB (SALADIN), the founder of the dynasty of the Ayūbīds [q. e.], and the champion of the djihād against the Crusaders (born 532/1138, died 589/1193).

SALAH AL-DIN

Ismā‘īl, Saladin gained a victory over the Zangid forces at the Horns of Hamāt in Ramadan 570/April 1175, after which a peace was made, and Saladin also received permission from the new treaty granting him delegated authority over Egypt and Syria, except for Aleppo and its dependencies. In Shawwāl 571/April 1176 the combined Zangid armies, having taken the offensive despite the treaty of the previous year, were defeated for the second time at Tall al-Sülṭān, near Aleppo, but Saladin was still unable to force the city’s surrender. Saladin’s gains, including some north of Aleppo, were confirmed in a new treaty in Muharram 572/July 1176. However, the ruling junta along al-Šā‘īl Ismā‘īl in Aleppo, and the other Zangid princes, remained impervious to Saladin’s propaganda and suspicious of his aims.

During these campaigns Saladin suffered two attacks by Raḥīd al-Dīn Sinān’s [q.v.] Ismā‘īlí Assassins, prompted by his Aleppo enemies, but subsequently, after some show of force in Assassin territory, he seems to have established a modus vivendi with them (see B. Lewis, Saladin and the Assassins, in BSOAS, xv [1953], 239–45).

His campaigning against the Franks was limited at this time and included the overconfident raid into Palestine that ended in defeat between Ašcalon and Ramla at the unidentified ‘Mons Gisardi’ in Dhu‘ al-edly 573/November 1177. This lesson was taken, but it was an auspicious beginning to any plan of making good his claim to be Nūr al-Dīn’s successor in the prosecution of the djāhīd. Better success followed in Muḥarram 575/June 1179 with the defeat of King Baldwin at Mardj ‘Uyyūn and the destruction of Bayt al-Ahzān or Jacob’s Castle in Rāb‘ī I/August of that year.

During the next five or six years, Saladin was mostly involved in Mesopotamian affairs, which were of great complexity and are too complicated to be treated exhaustively here. On several occasions Saladin was able to make gains on being invited to intervene in disputes or appeals for assistance. In 576/1180 the Artukid ruler of Hisn Kayfā, Nūr al-Dīn Muḥam-mād b. Kāra Aslān, appealed to him for help in a dispute with Kīlīgī Aslān [q.v.], the Rūm Sağlāqīkīd, whose influence against Ra‘bān had been checked the year before by Saladin’s nephew, Taq ī I-Dīn Ūmar. Saladin subordinated himself to the caliph and confirmed his authority, into the territory of the Rum Saldjukid, and so Saladin’s overlordship was finally recognised. It ended in an annihilating defeat for the Crusaders. It provided troops for the djāhīd, and so Saladin’s overlordship was finally recognised.

After a year of recuperation and internal reorganisation, the long-awaited campaign was launched at the beginning of 583/spring 1187. Saladin’s allies were summoned from all quarters, and the full forces of the Crusader states (except for Antioch with which a truce had been made) were brought to battle at the Horns of Ḥaṭṭīn, on the heights to the west of Lake Tīberias, on Saturday, 24 Rab′ū I 583/4 July 1187. It ended in an annihilating defeat for the Crusaders. Demoralised and with reduced garrisons, many towns and strongplaces surrendered or fell quickly. Acre surrendered on 1 Dhu‘ al-edly 583/I 1187. Saladin sent out his forces in various directions. By the middle of Dhu‘ al-edly early September, all the coast from Gaza to Ḉubayl was in Saladin’s hands, apart from Tyre. At this point Saladin moved to Jerusalem, the sym-
bolic goal of the *djihad*. The city surrendered, after nearly two weeks of siege and some spirited resistance, on 27 Ramdān/2 October and Saladin solemnly installed in the Açkk Mosque the minār that Nur al-Dīn had prepared for this moment.

Saladin has been criticised for his failure to give high priority to the capture of Tyre. This and the other ports would clearly be crucial for any eventual rescue expedition from Europe, but Saladin was not to know that Conrad de Montferrat would arrive just when he did to stiffen its defence. It was also strategically important to reduce the points d'appui represented by the inland castles, and the terms that Saladin offered, backed by the confidence that people had in his word, accelerated the surrender of many places. Although Saladin has been described as only a moderately good strategist and tactician, there is also a more positive judgement on his strategy at this stage in his operations, understood in the light of its possible relationship with the theoretical work of al-Ḥarawi, al-Taqlīdar al-bararqiyiyī, fi 'l-hijāl al-barhānīyyī (see W. Long, Saladin and Muslim military theory, in The Horns of Hātin, ed. B.Z. Kedar, Jerusalem 1992, 228-38). Many refugees from the interior assembled in Tyre. A siege of the city that began in Ramdān 583/November 1187 proved fruitless, and the majority of the Muslim armies disbanded in Dhu 'l-Kā'ūda 583/January 1188.

When campaigning began again during 584/1188, Saladin made further conquests in northern Syria, taking Tartūs, Dijbala, Latekhkhiyak, Sabḥūn and Balāṭunus but not attempting Tripolī. He also took the outlying fortresses of the principality of Antioch, but then made a truce without any attack on Antioch itself. In Shawawīl 584/December 1188, having moved south via Damascus, Saladin forced the surrender of Safād [q.v.], and Kawkbaw (Belvoir) fell in Dhu 'l-Kā'ūda 584/January 1189. Further south, al-Karak finally succumbed to al- Ḥādī's [q.v.] siege, and Shawbak [q.v.] followed several months later.

The regular arrival of the forces of the Third Crusade led to their investment of Acre and the besieging of the besiegers for a period of almost two years. Saladin looked far and wide for assistance, fostering relations with the Byzantines (see C.M. Brand, The Byzantines and Saladin, 1185-1192: opponents of the Third Crusade, in Speculum, xxxvii [1962], 167-81), and coordinating unsuccessful attempts by different principalities in North Africa for naval help (see M. Gaudeguy-Demombynes, Une lettre de Saladin au Calife almahade, in Mèlanges René Basset, Paris 1925, ii, 279-304). Acre fell to the Franks in 587/July 1191. For a little more than a year after this military operation on the Palestine plain, led by Richard I of England, continued indecisively, and a Frankish attempt to march inland against Jerusalem had to be abandoned. See W.L. J. and involved negotiations ended in Shaba' 588/September 1192 with the agreement to a general peace for three years and eight months and a recognition of Frankish coastal gains from Acre to Jaffa.

Saladin made various visits of inspection and organisation in the reconquered lands, again put off a proposed journey to the Hijāz to perform the *Hajj*, and returned to Damascus, where he fell ill. After about two weeks of steady decline, moving about his house and garden, he died on Wednesday, 27 Safar 589/3 March 1193. He was buried initially within the Damascus citadel, but during Muḥarram 592/December 1195 his body was transferred to a newly-built tomb (turba) north of the Umayyad Mosque (Abū Shāma, al-Dhikr al-hāl il-Raṣūlatayn, ed. al-Kawīhārī, Damascus 1947, 8, and Ibn Khallīkān, ed. 'Abbās, vii, 206).

Saladin’s death occurred only a few months after the peace had been made. Bahā' al-Dīn Ibn Shaddād claimed that Saladin had earlier contemplated the rejection of any peace proposals and wished to carry on the fight until every last Frank had been driven out of the Levant. The fact that the peace had been signed and a period of respite guaranteed was subsequently seen as a blessing, as his death while hostilities were still continuing would have produced a situation full of danger.

The cohesion of Saladin’s empire was tested to the full by the events of the Third Crusade. The hardships and expense of this long campaigning, the reverses and the slow decline in morale, meant that some northern allies, also faced by their own local problems and rivalries, failed to send their troops. Saladin’s nephew, Tašīr al-Dīn, also withdrew to follow his own ambitions at Māyyāfārinjī and added to that region’s complications. However, the point has been fairly fairly made by Gibb that many of Saladin’s vassals, including the Zangids of Mawsīl and Sindjār, although initially constrained to accept his suzerainty, continued to rally to his standard with their contingents throughout this period. Had they refused, it would have been difficult indeed to spare troops to force them. This suggests that by this stage Saladin’s cause had to some extent been accepted as the cause of Islam and of the *djihad*.

Saladin’s desire to win the wider acceptance and cooperation of ruling and religious circles are themes that informed his propaganda addressed to Baghdād and elsewhere. The ways in which the ideals of the *djihad* were fostered and the message spread throughout society under Saladin have been studied exhaustively by E. Sivan (L’Islam et la Croisade. Idéologie et propagande dans les réactions musulmanes aux Croisades, Paris 1968, ch. 4). Saladin’s public statements maintained that the ultimate aims of *djihad*, the duty of Muslim princes to participate, and also the delegated authority he had been given by the caliph, justified his compulsion of those unwilling to join the common cause. How much weight the pronouncements of the caliph and his granting of supporting diplomas had in the battle for men’s minds and allegiance over against considerations of temporal interest it is difficult to say. Saladin clearly thought it wise while to keep up a barrage of letters to Baghdad seeking further widening of his widening authority and sanction for his politics and military moves. It is doubtful, however, whether the rhetoric in letters written by such persons as al-Kāfī al-Fāḍil really amounted to the expression on Saladin’s part of a desire to restore the caliphate as the active centre of a renewed Islamic political entity, as Gibb has suggested. Even he has admitted that “propaganda points may be difficult to disentangle from religious zeal.” Indeed, it seems that the nearer the frontiers of Saladin’s empire came to Baghdād, the more trouble were his relations with the caliphate which itself was attempting to expand its temporal influence and areas of control. Symptomatic was the brawl over precedence between ‘Irākī and Syrian pilgrims during the *Hajj* of 583/February 1188, which ended in the death of Saladin’s long-time supporter, the emīr Ibn al-Mukaddam.

Saladin’s life in Syria, and Damascus was always his preferred place of residence. Egypt and her resources supplied the means for his expansionist policy and his victories. For long periods he entrusted his government to his brother al-Ṣādir, and to his chief civilian administrator, al-Kāfī al-Fāḍil. There are signs that the economic strain of the constant campaigning affected Egypt and Syria too, and that social unrest was growing. Serious financial
problems arose, partly because of the exhaustion of the Upper Egyptian gold-mines but mainly from the Fatimid currency had known (A. Ehrenkreutz, *The crisis of the dinar in the Egypt of Saladin*, in JAOS, lxvi [1956], 178-84). It is interesting to note that the addition of Yemen to the empire, which had been conquered for the Ayyubids by Saladin's brother Turan-shah, and later ruled by another brother, Tughtakin, clearly created hopes that it would be a source of treasure, and that Saladin's complaints, when that was not satisfactorily forthcoming, mirror Nūr al-Dīn's earlier complaints about the insufficient aid he had received from Egypt.

Saladin's lands were administered by a decentralised bureaucracy, the details of which will probably always remain obscure. As for Egypt itself, we possess a work on the land tax, in an imperfect version, revised about 581/1185 (see *Alī b. Uthmān al-Makhrūqī, Kitāb al-mishrāf, fi 'ilm al-kharāj*, ed. Cl. Cahen and Y. Ragheb, Cairo 1983, and also Cahen, *Maghāmīyyāt. Études sur l'histoire économique et financière de l'Egypte médievale*, Leiden 1977), and there is also extant a wider examination of the bureaucracy by Ibn Mammātī (d. 606/1209) entitled Kitāb Kawsānin al-dawdwin (ed. A.S. Aitya, Cairo 1943). At various times during his life he delegated the control of parts of his empire to the growing number of family members and to trusted officers of the army, relying on family and personal loyalties and on a balance of interests to preserve the whole. The last arrangement he made for the division of power in his empire did not, however, endure long after his death. Saladin may or may not have been personally indifferent to wealth and possessions. In general, however, he recognised and forwarded the interests of his family and was eager to protect their dynastic future, although at times the wishes and ambitions of members of his family, especially his brothers Tūrānshāh and Tughtakin, caused him difficulties. He was nevertheless capable of arguing against claims of hereditary expectations on the occasions when the Zangids advanced them. Ultimately, the dominant role passed to a collateral branch of the Ayyūbid family, which he fostered. He left his territory, like his predecessors, to his direct descendants, and for most of the dynasty's history Saladin's direct descendents ruled only in Aleppo.

Fundamentally his position depended on the army, the core of which was his personal guard, the kalka [q.v.]. Apart from the dominant contribution of Egypt, each urban centre in greater Syria and the Maghrib maintained an 'askar commensurate with its resources. The whole army, which was paid by ḥiṣā [q.v.] or by monthly salary (dānāmakha) was still largely free-born, although the sultan, princes and amirs had their personal mamlika contingents (see H.A.R. Gibb, *The armies of Saladin*, in J. Shaw and W.R. Polk (eds.), *Studies on the civilization of Islam*, Boston 1962, 74-90). Because of the domination of the Mediterranean by the Italian states both for trade and for the movement of troops, Saladin made attempts to revive the Fatimid naval power, and his ships made some useful participation in his operations, but ultimately he lost control of the sea during the Third Crusade (see Ehrenkreutz, *The place of Saladin in the naval history of the Mediterranean Sea in the Middle Ages*, in JAOS, lxv-v [1955], 100-16).

Unlike his mentor, Nūr al-Dīn, who was a Ḥanāfī, Saladin adhered to the Shāfī madrasa, in which he was followed by practically all the members of his dynasty. In his theology he was of the Aṣḥā'ī persua-
sion. In the reported wording of the *waṣīfiya* for the Shāhānshāh which he founded in Cairo (see al-Mabrūzī, *Kitāb*, ii, 415-16), the residual beneficiaries of the *waṣīf* income are "poor Shāfīs" or Mālikī *ṣalāhād*, who are of the Aṣḥā'ī creed. In the construction inscription for the madrasa which he founded at the tomb of al-Shāhīfī, in which unusually Saladin's name and titles have no mention but only the initiative of the shahāb al-Shāhānshāh is stressed, the Aṣḥā'ī anti-Hāshimiyya nature of the foundation is made explicit. In many respects, in the public image at least, his regime followed that of Nūr al-Dīn in striving to suppress non-Islamic elements in society and administration and in promoting Shāfīa norms. There is little evidence of specifically anti-Ismā'īli activity. Once the Fatimid court and the ruling establishment had been scattered and the infernal attempts at counter-coups dealt with, the underlying Sunni nature of Egyptian society could assert itself. As for intellectual pursuits, he studied Hadith and was fond of poetry, 'Usāma b. Munkīd b. Uthman al-Makhzumiyya being an especial favourite.

As regards his building activity, he was responsible for much military work throughout his lands. The grand design to enclose Cairo and Fustāṭ with a defensive wall was begun on his behalf by Bahlūl al-Dīn Karkūsh [q.v.] but never completed. The Citadel of Cairo was also conceived by Saladin and started in 572/1176-7, but finished after his reign and subjected to many later changes. Adjacent to the Imam al-Shāhīfī's tomb he constructed a madrasa for the Shāhīfīs (see above) and near the mosque of 'Amr b. al-Āṣ a madrasa for the Mālikis, which came to be known as al-Kumbhiyya. The latter was begun in Muḥarram 566/September 1170. In Cairo proper he converted the former residence (dār) of the Fatimid vizier al-Ma'mūn into a madrasa for the Ḥanafis (waṣīfiya dated Shābīn 572/March 1177) and built a Shāhānshāh (waṣīfiya dated 569/1173-4). These were the earliest examples of such institutions to be founded in Egypt. He also converted part of the Fatimid palace into a hospital (bimarstān) during 577/1182. After the reconquest, Jerusalem received much of his attention, in the restoration of the Dome of the Rock and the Aqṣā Mosque to make them fit for Muslim worship, and also in the conversion of the Latin Patriarch's residence into a hospital. In Ḥamā he converted the church of St Anne into the Madrasa for the Shāhīfīs (also endowed in 585/1189), and in the provision of a hospital (begun 588/1192).

Saladin's personality is somewhat hidden behind the image-making of his admirers. One thing beyond doubt is that he could inspire devotion in his followers. His generosity, fidelity and compassion are vividly portrayed, but he could also be ruthless. He was impatient of details of administration. The generally pro-Zangīd Ibn al-Aṣḥīr [q.v.], who frequently skews his historical account to Saladin's disadvantage, in his final summary of Saladin's life and career nevertheless gives a more positive assessment, when he writes, "He was a man of religious knowledge and culture, a Hadīth scholar. In short he was a man of rare qualities in his time, much given to generosity and fine deeds, a mighty warrior of the multi-

*Cf. Part 2 of this article*.
merchandise constituting the subject-matter of the contract) to be delivered to him by the vendor (al-
*musāllam ilayhs*) on a date at the end of a specified period. In such a transaction, the consideration (i.e.
the price, be it in cash or in kind) agreed upon at the contracting parties’ meeting (madā'īs al-’akd) for
delivery of the merchandise is termed ra’ā’s al-‘ālīn. In
asmuch as the latter was, as it still is, the normal
Arabic term for “capital” in the financial sense of the
word, it is not difficult to infer from it the essentially
economic purpose that the salām was intended to serve, namely that of affording small traders and
merchants an immediate transaction and not
salam—of capital loan or investment), but also—and very much
more importantly in the context of salām—of ḡfarar
(“chance”, i.e. risk, uncertainty, speculation). Be
that as it may, the early mediaeval jurists, once
conscious of the need to recognise the validity of a prac-
tice that was in effect an economic necessity meeting
the legitimate needs of the public, deemed it both ap-
propriate and expedient to accommodate salām within
the ideal framework of the Ḥanafī law and found
themselves able to invoke in support of it, inter alia, the
authority of a Tradition attributed to the Prophet
himself.

To incorporate the principle of salām in Islamic law
was one thing; to implement it was another. On cer-
tain basic matters (e.g. that the price and object of a
salām sale cannot both be currencies; that the objects
of sale must be fungible (mūghīṭ, i.e. replaceable by
others answering to the same definition), weighable
(maṣālīṭ, etc.) and concerning the main Sunnī schools of law were broadly in agreement,
but on many points of detail important differences
of opinion took shape and prevailed in the doctrine of
particular schools. And so it is that we find, for exa-
mple, that in Ḥanafī law living animals are not held to
be proper objects of a salām sale, whereas in Mālikī law
the contrary is the case. Again, in Ḥanafī law the
object of a salām sale must be in existence at the time
of the contract and from the time the latter is conclud-
ed until the time it is delivered, whereas in Mālikī law
the requirement is only that the object be available at the
time when delivery falls due. Exceptional and
peculiar to the Shāfi’ī law is the surprising doctrine that
salām can be an immediate transaction and not
necessarily one providing for future delivery of the ob-
ject of sale. Similarly exceptional and hardly less sur-
prising is the Mālikī doctrine that the price for the ob-
ject of sale need not be paid at the madā’īs al-’akd, but
may, by mutual understanding, be postponed for up
to three days or, in certain circumstances, for even
longer than that. And so on.

Since by its very nature a salām transaction denies the purchaser what is known as “option after inspec-
tion” (ḥiṣār al-ru’ya) of the object of sale, a descrip-
tion of the latter is the only possible means of avoiding
ignorance (jaḥl) of it and of safeguarding the salām contract against the intrusion of a material element of
risk or uncertainty (ḡharar). According to Ibn Kudāmā
(541/1147–1223 [g.n.]), the well-known luminary
of the Hanbali school, knowledge of the subject-
matter—designated ʿilm in his terminology—is essen-
tial to the validity of a salām contract and should be
imparted by a description stating the genus and species of whatever is in question and declaring the
condition of the latter, be it good or bad. According
to the same jurist, both Abū Ḥanīfa and Mālik re-
quired the description, and accordingly supply such
details as was, in their view, sufficient to enable one to identify the object of sale, while Ibn Hanbal and al-Shāfī’ī
required the detail to extend to such matters as colour,
country of origin and other characteristics influencing
price and use.

For obvious reasons, it is beyond the scope of this
article to identify all the respects, or even all the most
important respects, in which the doctrines of the four
Sunnī schools of law can differ. From what has been
said hitherto it will be quite clear that important par-
ticulars of salām sale are matters on which the different
schools do not always speak with one voice. Accord-
ingly, in one’s utilisation of sources identification
of the schools to which data relate is a sine qua non.

71 ff.), a work in which the doctrine of the Ibadī school of law, peculiar to ‘Umān, is treated in addi-
tion to the doctrines of the four orthodox schools;
function of documents in Islamic law*, Albany 1972, 193-
200 (Bāb al-salam [in Arabic], Introd., 41-2). Partic-
ularly useful in some respects for Mālikī law is O.
Pesele, *La vente dans la doctrine mālikite*, Rabat 1940 (see esp. 175-96), which may be consulted along
with D. Santillana, *Istituzioni di diritto musulmano
malichita con riguardo anche al sistema sciāfità*, 2 vols.,
Rome 1925-38. For primary sources see the bibliogra-
phies of Saleh, Uдович, Wakin and San-
tillana (Pesele, though citing his sources, offers no
bibliography).

**SALAM (A.),** verbal noun from *salma,* “to be safe, unimpaired, unscathed”, only substantive in the sense of
“safety, salvation”, thence “peace” (in the sense of
“quietness”), thence “salutation, greeting” (cf. Fr.
salu); on the statements of the older Arab lex-
icographers, see L’Aï, xv, 181-3, passim.

The word is of frequent occurrence in the Kurān,
especially in the sûras which are attributed to the
second and third Meccan periods. The oldest passage
that contains salām is XVII, 5, where it is said of the
Laylat al-Kadr, “It is salvation or diversification on the
night of Ḥaḍr”. Salām is also to be taken in this meaning in L,
34; XV, 46; XXI, 69; XI, 48. Salām means salvation in
this world as well as in the next. In the latter mean-
ing we find it used in the expression *Dar al-Salam* “the
abode of salvation” for Paradise (X, 26; VI, 127). In
the Medinan verse, V, 16, which is addressed to the
Ahl al-Kisā’, we find the expression *subul al-salām,* the
paths of salām (cf. Isa. LIX, 8; ḏarūr al-ḥidūl).

But salām is most frequently paid at the Bab al-salam, i.e. as a form of salutation. Thus in LVI, 91 (first Meccan
period), the people of the right hand are greeted by their
companions in bliss with salām laka “Peace be upon thee” (according to al-Bayḍawī; for other ex-
planations see L’Aï, xviii, 184, 8 ff.; and Allāh, salām
(XXXVI, 58; XIV, 23; X, 10; XXXIII, 44) or salām
 al-lakum (XVI, 32; XXXIX, 73; XIII, 24) is the
greeting which is given the blessed in Paradise or on entering Paradise (cf. also XXV, 73); salāmān salāmam in LVI, 26 (other reading salāmēn salāmān; cf. XIX, 62) is presumably also intended as an auspicious exclamation (other interpretations in al-Baydawi). Those on the Aʿrāf [q.e.v.] call to the dwellers in Paradise salām ʿalaykum (VII, 46). Salām is also the greeting of the guests of Ibrāhīm and his reply (LI, 25; XI, 69; cf. XV, 52). Ibrāhīm takes leave with salām ʿalaika (XIX, 48) from his father, who threatens him. In XX, 47, Mūsā in his address to Fīrʿawwân is made to use the exclamation al-salām ʿalāka (67-9) “peace be upon you” to follow the right guidance. According to the first explanation in al-Baydawi, al-salām here means the greeting of the angels and guardians of Paradise; but as these words are not at the beginning of the speech, an other interpretation prefers to consider it as an affirmative sentence and to take salām as “security from God’s wrath and punishment” (cf. al-Baydawi on the passage and LÂ‘I, xv, 183). Salām ʿalāka, “peace upon you,” is also used repeatedly in XXVII, where at the end of the mention of each prophet a salām is uttered over him (verses 79, 109, 120, 130, 181; cf. also XIX, 15, 33). Salām may be used in an ironical sense in XLI, 89, at parting from the unbelievers and salām ʿalaykum in XXVIII, 55 (other interpretations in al-Baydawi). This might perhaps hold of salāmān, XXV, 63, also, with which the servants of the Merciful reply to the ignorant (džøštîn), but the commentators take it in the sense of tasalumān or barâzatam. In LIX, 23 (Medinan al-salām occurs as one of the names of God, which al-Baydawi interprets as mašar ṭam as yāf in the meaning of the Faultless (for other explanation, see LÂ‘I, xv, 182, 7 ff., 20 ff.). Al-salām in the expressions dâr al-salām and subul al-salām is therefore also interpreted as a name of God (cf. al-Baydawi on VI, 127; X, 25; V, 16; LÂ‘I, xv, 182, 2-3, and the notice at the end of this article). The word has even been taken to mean God in the formula, as he considered it the word has even been taken to mean in LÂ‘I, xv, 183, 5 from below, were genuine and really by Umayya b. Abī l-Salt [q.e.v.], one might perhaps conclude from it that there was a benedictory usage of the salām formula in the morning service in certain monotheistic circles of North Arabia. Presumably the usage, influenced by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Lutzbarski’s suggestion (in ZS, i, 85 ff.) that salām reproduces the idea expressed by ñow pia need not be discussed here, but his explanation of ʿĪsâm as the infinitive of a denominative verb aslama formed from salām-ṣowriqa (“to enter into the state … of salām”), cannot be reconciled with such expressions frequent in the Kurʿân as aslama wâdh-hâ liʿlāh, aslama li-Rabb al-ʿālamâin, etc.

Muhammad must have placed a high religious value on the salām formula, as he considered it the greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A salām, like that in the tasâhhudd (see below) or like the salutation of peace which closes the salāt and has its parallel in the Jewish ephîthut (cf. E. Mittwoch, Zur Entstehungsgeschichte des islam. Gebets. Göts u. Kultur, in AKH PAKW, phil.-hist. Kl. [1913], no. 2, p. 18), may have been present from the first beginning of the ritual of divine service. According to a tradition (al-Bukhârî, al-İstidhdâm, 148, al-Adhan, 52; cf. also Dalman, Gramm. d. jud.-phil. und Aramaic expressions greeting before Islam. The corresponding Hebrew and Aramaic expressions šâlôm kî, šâlôm lāyî [q.e.v.], as well as old Testament usage (cf. Judges xix, 20, 2 Sam. xviii, 28, Dan. x, 19, 1 Chron. xii, 19), were also in use as greetings among the Jews and Christians (cf. Dalman, Gramm. d. jüd.-phil.-hist. Kl. [1913], no. 288 ff., twice repeated in nos. 244, 339, thrice repeated in no. 302) and the Arabic l-t-l-f frequently occurs in the Sāfātîc inscriptions as a benedictory term. C. E. Littmann, Zur Ent- zifferung der Safât-Inschriften, in Leipzig 1901, 47, 52-3, 55, 56, 57, 59, 61, 64, 66, 67, 70, Semitische inscriptions, New York: Scribner’s, 1905, Safātîc inscrips., nos. 5, 8, 12, 15, 69, 128, 134.

If the line salāmâka raḥâbanâ fâ kûlî šâriqam quoted in LÂ‘I, xv, 183, 5 from below, were genuine and really by Umayya b. Abī l-Salt [q.e.v.], one might perhaps conclude from it that there was a benedictory usage of the salām formula in the morning service in certain monotheistic circles of North Arabia. Presumably the usage, influenced by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Lutzbarski’s suggestion (in ZS, i, 85 ff.) that salām reproduces the idea expressed by ñow pia need not be discussed here, but his explanation of ʿĪsâm as the infinitive of a denominative verb aslama formed from salām-ṣowriqa (“to enter into the state … of salām”), cannot be reconciled with such expressions frequent in the Kurʿân as aslama wâdh-hâ liʿlāh, aslama li-Rabb al-ʿālamâin, etc.

Muhammad must have placed a high religious value on the salām formula, as he considered it the greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A salām, like that in the tasâhhudd (see below) or like the salutation of peace which closes the salāt and has its parallel in the Jewish ephîthut (cf. E. Mittwoch, Zur Entstehungsgeschichte des islam. Gebets. Göts u. Kultur, in AKH PAKW, phil.-hist. Kl. [1913], no. 2, p. 18), may have been present from the first beginning of the ritual of divine service. According to a tradition (al-Bukhârî, al-İstidhdâm, bdb 3, al-Adhan, bdb 148, 150), originally they uttered the salāt at the close of the salāt on God, on Diʾbîrîl, Miḥkârlî and other angels. With the remark that God is himself the salām (cf. Kurʿân, LIX, 23), the Prophet disapproved of this and laid down what should be said in the tasâhhudd; the salāt utterance belongs to it in the form given below. On varying traditions regarding the tasâhhudd, see al-Şâfiʿî, K. al-Umm, Cairo 1321, i, 103 ff.; cf. also Goldzihere, Über die Eulogien, etc. in ZDMG, i, 102.

In the ritual of the salāt as legally prescribed, the benediction on God and the salām on the Prophet, on the worshipper and those present and on God’s pious servants, preceded the confession of faith in the tasâhhudd (al-salām ʿalayka, āyyahk ʿalayka, wa-rabbamū lātuṭuṭn; al-salām ʿalayka, wa-raḥmatu lāthâ, šālôm wa-slâlôm ibâdi lāthâ l-salātîn). Among the compulsory ceremonies of the salāt, there is also at the end of it the taslimat al-ʿâlî, the fuller form of which consists in the worshipper in a sitting position turning his head to right and left and saying each time al-salām ʿalaykum wa-raḥmatu lāthâ. See al-Bajjuri, Ḥādiyya al-salâr sharh Ibn
SALAM

Kasim al-Ghazzi called Abi Shudja, Cairo 1321, i, 168, 170.

The preference of the Kur'an for the salâm formula and its liturgical use may have contributed considerably to the fact that it soon became considered an exclusively Muslim greeting (tahiyat al-salâm). As already mentioned above, the Kur'an prescribes the salâm on the Prophet to follow the tasliya. Tradition reports that the latter endeavoured to introduce it. When 'Umayr b. Wahb was brought before him and gave him the pagan greeting (an'ima sabda), the Prophet was indignant and exclaimed: 'Shall I give you a better greeting than thine, namely al-salâm, the greeting of the dwellers in Paradise? (Ibn Highám, 472, below, ff.; al-Tabari, i, 1353, 10-11). Those around him are said to have been eager to introduce this greeting. Al-Wâkidî relates that 'Urwa b. Mas'ûd, who immediately after his conversion wanted to convert his own townsman in Tâ'if to Islam, called the attention of Thâ'âfik, who saluted in the heathen fashion, to the greeting of the dwellers in Paradise, al-salâm (Ibn Sa'd, al-Tabakât, v, 369; Sprenger, Das Leben ..., des Mohammad, iii, 482; Goldziher, Muh. Stud., i, 482; cf. Lane, Manners and customs, i, 229, note), the threefold formula was very common as a return greeting in Egypt; cf. also Nallino, L'Arabo parlato in Egitto, Milan 1913, 121. In Mecca, it is comparatively rarely used, the reply usual is wa-salâm (âl-salâm) wa-rahma (we-rahmatu 'llâhi), which, according to the strictly orthodox opinion, like the tasliya, should only follow the names of Prophets, but already mentioned above, the Kur'an prescribes the salâm formula to use the greeting of the dwellers in Paradise (Ibn Highâm, 472, below, ff.; al-Tabari, i, 1290, 9 ff.; Sprenger, op. cit., i, 485; Goldziher, L'AstPâhdn, bdb 38; cf. Snouck Hurgronje, Mekkanische Sprichwörter u. Redemanner, The Hague 1886, 118. Landberg (Études sur les dialectes de l'Arabe méridionale, ii, 788, note) thought that the longer form recalls the priest's blessing in Num. vi, 24-6. The application of 'âl-salâm' to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i.e. the person; Fakhî al-Dîn al-Tabârî, i, 501, 19 ff., cf. iii, 515, 17 ff.).

At the conclusion of a letter, the expression wa-l-salâm ('ala-salâm, 'al-salm') is used, e.g. Ibn Sa'd, i/2, 27, 17, 27, 28, 2, 5, 23, 29, 13, 21. Al-Hârîrî (Durrât al-gauwâs, ed. Thorbecke, 108, 9 ff.) disapproves of the use here of the indefinite form (salâm), which, according to the more correct use, should only be used in the beginning. Wa-l-salâm has occasionally the meaning of "and that is the end of it" (cf. Snouck Hurgronje, op. cit., 92).

In keeping with Kur'an, XX, 47, it became usual to use the form al-salâm 'alâ man itabâ'a 'l-huda to non-Muslims when necessary (cf. Fakhî al-Dîn al-Tabârî, ii, 501, 26 ff., iv, 706, 19-20). It is found, for example, in letters ascribed to Muhammad (al-Bukhârî, al-İstiqlân, bbd 22; Ibn Sa'd, i/2, 28, 10-11; cf. line 6 there at the beginning of the letter, to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i.e. the person; Fakhî al-Dîn al-Tabârî, i, 501, 19 ff., cf. iii, 515, 17 ff.). At the conclusion of a letter, the expression wa-l-salâm ('ala-salâm, 'al-salm') is used, e.g. Ibn Sa'd, i/2, 27, 17, 27, 28, 2, 5, 23, 29, 13, 21. Al-Hârîrî (Durrât al-gauwâs, ed. Thorbecke, 108, 9 ff.) disapproves of the use here of the indefinite form (salâm), which, according to the more correct use, should only be used in the beginning. Wa-l-salâm has occasionally the meaning of "and that is the end of it" (cf. Snouck Hurgronje, op. cit., 92).

damently, two interpretations. God is (1)
in no degree, here, taken into consideration. See D. and (2) inasmuch as created beings are preserved
in water and drink it in the hope that they may enjoy peace and happiness (Dīfār Sharīf-Herklots. Islam in India or the Qū nisi-A İuslim, new ed. W. Crooke, London 1921, 186-7).
On coins, salam (sometimes abbreviated to s) means “of full weight, complete” (cf. J.G. Stickel, Das grossherz. Orient. Münzenabente zu jena (Handl. d. Morgenl. Münzkunde), Leipzig 1845, i, 43-4; O. Co-
Drington, A manual of Muslim numismatics, London 1904, 10).
[Employed as a name of God, al-Salam is under-
stood by the commentators as a masdar used metonymically in the sense of dhu ‘l-salam, salam being in this context an equivalent of salama “the state of being preserved from ...”. Whence there arise, fund-
amely, two interpretations. God is al-Salam (1) inasmuch as He is preserved from all imperfection and infirmity (dhu ‘l-salama min kull naks wa-dfd), and (2) inasmuch as created beings are preserved from all injustice on His part (salam ‘l-khalk min zulmih). Contrary to the commentary given by L. Gardet (in al-Asma’ al-Husna), the idea of “peace” is in no degree, here, taken into consideration. See D. Gimiraret, Les noms divins en Islam, Paris 1898, 264-5].
(Onan ABEKOON/D. GIMARET)]

SALAMA b. DJANDAL, a poet of pre-Islamic time, was a member of the clan al-Harīḥ, which belonged to the large division of Sa’d b. Zayd Manāt of the tribe Tamīm. Ibn Sallām al-Djmālī places him in the 7th class of poets (Tabākā al-‘awāṣa; ed. Hell, Leipzig 1916, 36). He is recorded among the earliest poets of the Dāhilīyya (q. v. of whom only a few poems are preserved (al-makālīn). According to two events mentioned in his verses, he must have flourished during the second half of the 6th century of our era. The Nādīd of Djarīr and al-Farazdak (q. v. i) give two poems of Salama, not included in his diwān, where he celebrates the victory of Djadūd, a battle, in which the
clan of Mīnṣār, a division of Zayd Manāt, defeated the Banū Shāyba of the tribe Bakr b. Wā’il. It must have taken place about the middle of the 6th century. In his longest poem (Dīwān, no. 3, v. 38), also included in the Amīrādpā (no. 42, v. 38), he refers to the end of the king al-Nu’mān III (q. v. of Hira, who was trampled to death by elephants at the order of the Per-
sian ruler Khūraw Parwīz in 602, which provides a terminus post quem for Salama’s death. There is no evidence that he lived to the time of Islam, and none of his descendants appear to be named in the biographies of early Muslims.

Another work in honor of his diwān has caused some confusion among scholars. There is a monothematic poem of four lines (no. 7) addressed to Saṣa’a b. Maḥmūd of the clan of Marjad, who had taken the poet’s brother Ahmar (sometimes misspelled Ahmad) prisoner and released him without ransom on account of Salama’s intercession (cf. also al-Dīhāz, al-Bayān wa ‘l-‘iyān, ed. A.S. Hārūn, Cairo 1367/1948-50, iii, 318). A different report has it that al-Ahmar had been taken prisoner in a raid led by Amr b. Kühtham (q. v.) (Dīwān ‘Amr, introduction to poem no. 2, ed. F. Krenkow, in Maṣḥīkh, xx [1922], 591-611, cf. 592, and also Ibn Kūtayba, Shi’r, 147; Aḥfānī, i, 183). Whether the two reports are mixed up, or whether Ahmar b. Djandal had been taken prisoner on two different occasions, cannot be established. If the latter is true, we have corroborative evidence for the life span of Salama, since it makes him a contemporary of ‘Amr b. Kühtham.
Salama’s diwān has come down to us in the recens-
ions of al-‘Asma’t (q. v.) and of Abū ‘Amr al-Shaybānī, the representatives of the Basran and the Kūfan schools respectively. The two recensions were united by Muhammad b. al-Hashan al-Aḥwāl (d. after 259/873), who pointed out occasional differences between the Basran and the Kūfan tradition. The text is preserved in four manuscripts. They form the basis of Fākh al-Dīn al-Kāwba’s edition (Aleppo 1387/1968), which superseded the earlier editions of Cl. Huart (A, 10e série, xv [1919], 71-105, with French translation) and L. Cheikho (Beirut 1920). The diwān contains 8 poems, 136 verses in all. In addition, the editor collected 27 poems and fragments from other sources, amounting to 120 verses.
Salama is reputed to have excelled in the descrip-
tion of horses (cf. Ibn Kūtayba, loc. cit.), and, indeed, his most famous ode, included in the Mufaddaliyya (q. v.) (no. XXII), contains a magnificent passage about the tribe’s horses for battle (no. 1, vv. 5-15), in place of the conventional camel theme. The poem begins with a complaint of old age (vv. 1-3) and ends with tribal fakhr. There are two other polythematic odes in the diwān, a tripartite form (no. 2) and a bipar-
tite poem (no. 3), both ending with a combination of fakhr and haḍa’q (q. v.), which is also the prevailing topic of Salama’s monothematic poems. His verses appear ancient in wording and imagery, and give the impres-
sion of authenticity. He refers to swords of Buṣra and al-Madā’īn, which are seldom mentioned in verses of later times, as swords were no longer obtained from
that. He mentions writing or even inkstands in water and drink it in the hope that they may enjoy peace and happiness (Dīfār Sharīf-Herklots. Islam in India or the Qū nisi-A İuslim, new ed. W. Crooke, London 1921, 186-7).

On coins, salam (sometimes abbreviated to s) means “of full weight, complete” (cf. J.G. Stickel, Das grossherz. Orient. Münzenabente zu jena (Handl. d. Morgenl. Münzkunde), Leipzig 1845, i, 43-4; O. Co-
zulmihi). Paris 1988, 204-5],

Les noms divins en Islam,
SALAMA MUSA, Egyptian journalist, encyclopaedist, socialist, political campaigner, enthusiastic moderniser and "westerniser". Born ca. 1887 to a well-to-do Coptic family near Zagazig, he died on 5 August 1958. He attended both Christian and Muslim kutabs, a school of the Coptic Charitable Society, and then the "national" school. From there he went to the Tawfiqyia (where he taught briefly in 1915), and the Khedivial College in Cairo. As a youngster he read avidly the Arab dailies and reviews, that spread the new ideas from Europe and made accessible European literature; to al-Muktatafhe he owed his scientific leanings and his simple, telegraphic style of writing that made his ideas accessible to a broad audience.

In 1907 he went to Paris. In Europe he was to develop his ideas about the emancipation of women; his book al-Mar'a layast la'bat al-raajul (Beirut 1956) voices his opinions on this subject. He went to London in 1908, joining Lincoln's Inn where he studied law, and following courses in Egyptology, geology, and economics. There he became acquainted with the works of many of the authors (Darwin, Spencer, Shaw, H.G. Wells, Elliot Smith, Dostoyevsky, Tolstoy, Gorki, Sartre, Goethe, Nietzsche, Marx, Freud, Gandhi, etc.), who influenced him profoundly, discussed in Hādāt al-‘izzāmān (Cairo 1953).

In Paris L’Humanité had introduced him to socialist ideas; in London he was to join the Fabian Society, where he met Shaw. From Shaw he derived much of his humanistic socialist ideas; he analyses his life and works in Bernard Shaw (Cairo 1957).

Throughout most of his life he wrote for the Egyptian press, his book al-Saḥaṭa ... ḥayda wa-risida (Cairo 1961), al-Asma’iyydt, ed. A.A. Bevan, i-iii, Leiden 1905-12, i, 144 ff. See also Blachere, HLA, i, 257; Sezgin, GĀS, i, 192. Verses of Salama are cited in most books dealing with ancient Arabic poetry, e.g. in the Lisān al-‘Arab 40 times.

A pioneer in the creation of the Arab socialist movement, in 1920 he helped form the short-lived Egyptian Socialist Party. He was to acknowledge late in life that the ideas of Darwin had had the most profound influence on him. He published al-‘Ilārākīyya (Cairo 1913), a short treatise on socialism (tr. in G. Haupt and M. Reberioux, La Deuxième Internationale et l’Orient, Paris 1967, 423-38, and in S.A. Hanna and G.H. Gardner, Arab socialism, Leiden 1969, 275-88). His al-Dunyā ba’d thalāthīn ‘am (1930) is on the prospects for socialism in Egypt. A collection of articles, Maqā’tal al-rājul (Cairo 1926), and M. Reberioux, al-‘Arabīyya (Cairo 1929) to guide the young on the revolutionary road. His Mukaddimat al-subīrmdn (Cairo 1910) on socialism, evolution, and egugens, advocates the application of selective reproduction and sterilisation to produce a Superman. The second edition, al-Ya‘um wa ‘l-‘iqād (Cairo 1927) discusses the ideas of Darwin, Nietzsche, and Shaw, and the emancipation of women. Dabt al-tanāsūl wa-man‘ al-haml (Cairo 1930), written with Dr Kāmil Labīb, returns to the necessity of improving the species and tackles birth control.

On his return to Egypt, he had publicised the theory of evolution; he discusses Darwin’s On the origin of the species in his most popular work Naẓāriyyat al-ta‘atūwur wa-asr al-insān (Cairo 1925), developed in al-Insān kimmat al-ta‘atūwur (Cairo 1961). He was to question the "commonly accepted mysteries" and turn to a belief in the "social value of religion." His book Nushū ḥikrat Allāh (Cairo 1912) is a summary of the ideas of Grant Allen on The evolution of the idea of God.

Under the influence of Gandhi, he founded the league al-Misrī li ‘l-Misrī, encouraging Egyptians to buy local products and to boycott foreign goods, arguing his case in Dīyāubah wa-ṣayyub al-adāb (Cairo 1930). His Ghandī wa-‘l-ḥarakā al-hindīyya (Cairo 1934) describes the struggle of Gandhi against British imperialism. Mūsā’s two principal facets in his writings were to be the British imperialists and Egyptian reactionaries; he was to wage a life-long battle in defence of democracy in Egypt. He was arrested and imprisoned on several occasions for alleged propaganda for a republican form of government and for writing on socialism and communism. Finding abhorrent the conduct of the palace and its supporters, he was amongst those intellectuals who welcomed the revolution of 1952. His Insdn kimmat al-tatawwur (Cairo 1953) deals with the lack of freedom of Egyptian intellectuals, and Kitāb al-Thawrdt (Beirut 1954) examines the French and Bolshevik Revolutions, and the two Egyptian revolutions of 1919 and 1952.

Altogether he wrote about 40 books, many of his writings first appearing in the periodical press. Amongst his collections of articles are Mukhtārāt Salama Mūsā (Cairo 1928); Fi ‘l-hayāt wa ‘l-‘adāb (Cairo 1930); Tarīkh naḥw il-a‘lah (Cairo 1949); Abjadiyat il-‘uqāb (Cairo 1957) and Makkālāt mamnūn’s (Beirut 1959) a collection of censored and banned articles. In his al-Balāgha al-‘azīriyya wa ‘l-‘lughā al-‘arabiyya (Cairo 1945) he criticises traditional Arabic eloquence for being unable to reflect the ideas of his age; at one stage, he had advocated replacing the Arabic script by the Latin, since he felt that the Arabic characters obstructed scientific progress. On literature, his al-Adāb li ‘l-‘akāb (Cairo 1956) applies social realism to contemporary Egyptian and classical Arabic literature; whilst al-Ta‘jid fi ‘l-‘adāb al-indīlīlī ‘al-adāb (Cairo 1934) examines the development of modern English literary trends. He published several collections of stories: Kiṣās muhkālīfa (Cairo 1930) a selection of stories, particularly from Russian literature; Men ṣūjī al-salām, kiṣās suyāfiyya (Cairo 1956) with ‘Abd al-Mun‘īm Ṣubbī); Rūdā dālaya ḥayāt, maqāma’s
Salāmān and Absāl

Salāmān and Absāl, two characters who figure prominently in a series of pre-modern philosophical and mystical allegories written in Arabic and Persian. The characters are first mentioned by Ibn Sīnā (q.v.), in the ninth chapter of his philosophical composition in its own right. Through his father's patient guidance, he is eventually freed of his ties to Absāl and assumes his rightful place on the throne. (A text of this version is included in Tūrī's rašādī, 112-19.) The next major use of the characters appears in the Treatise of Hayy b. Yakzān, written by the Andalusi philosopher Ibn Tufayl (q.v.). Ibn Tufayl states in his introduction that he composed the narrative to clarify what Ibn Sīnā referred to as the "oriental philosophy" (al-hikma al-mashrikiyya), and he refers to passages from the final chapters of al-IṣĀrāt wa 'l-tanbīḥāt to support his interpretation of the latter's work. Nevertheless, Ibn Tufayl's use of the characters is original, and his treatment of them is a significant philosophical composition in its own right.

In this narrative, Salāmān and Absāl appear toward the end of the story, after the main character, and that Absāl is a similitude coined for your degree in gnosia ("ycfyn"). If you be one of its folk. So decipher the symbolism (al-nama), if you are able (iv, 48-57). Ibn Sīnā also mentions the name of Absāl in his "Treatise on Destiny" (Risāla fi 'l-kadar) (Mehren, Traité mystiques, fasc. iii/5-6), but the story is not in the list of his compositions provided by Abū Ubayd al-Dūjzdānī (q.v.), the philosopher's companion, student, and biographer (despite al-Tūsī's assertion that it is), nor does it appear in any of the other traditional biographies of the Shaykh. Nevertheless, Ibn al-Kīṭīfī, Ibn Abī Uṣayḥībī, or Ibn Khallīkān (q.v.) makes no manuscript of the narrative has so far appeared.

In his commentary on al-Iṣārāt wa 'l-tanbīḥāt, Fakhr al-Dīn al-Rāzī (q.v.) suggests etymologies for the two names and states that there existed a story "among the Arabs" about the two characters, but he acknowledges that this version appears to have little connection with Ibn Sīnā's intent.

Our only source for the possible contents of the story is Nasrī al-Dīn al-Tūsī's (q.v.) commentary on al-Iṣārāt wa 'l-tanbīḥāt (iv, 49-57). Al-Tūsī first recapitulates al-Rāzī's remarks. Then he summarizes the contents of two versions of the story that he came across in the twenty years after he finished his commentary (for translations and full discussions of both versions, see Corbin, Ascenzi, 204-41; cf. Heath, Alchemy, 94-6). The allegorical decoding provided in the summaries below is al-Tūsī's.

The first version, which al-Tūsī believes "one of the common philosophers devised to fit the Shaykh's [i.e. Ibn Sīnā's] discussion," was purportedly of Greek origin and translated into Arabic by Ḥunayn b. Ishāk (q.v.) (iv, 52). In this narrative, Salāmān is a young prince of the rational soul who falls desperately in love with his mother's (the active intellect) engendered without recourse to a woman (matter) through the ingenuity of his minister (divine emanation). Salāmān is nursed by a young and beautiful woman, Absāl (the corporeal faculties), with whom he falls desperately in love. When his father, the king, disapproves of this attachment, Salāmān flees with Absāl to the lands of the far west (the material realm). Through his father's patient guidance, he is eventually freed of his ties to Absāl and assumes the role of the theoretical faculty of the rational soul. Learning this, Absāl repeats his words to his wife and retires to solitary meditation of God. (A text of this version is included in Tūrī's rašādī, 112-19.)

Al-Tūsī ascribes the second version to Ibn Sīnā, and justifiably so since it contains a scene referred to by the philosopher in his "Treatise on Destiny" (mentioned above). In this rendition, Salāmān is a king (the rational soul) and Absāl is his younger brother (the theoretical faculty of the rational soul advanced to the level of the acquired intellect) who aids his older sibling while resisting the sexual advances of the latter's wife (the bodily faculties). After conquering the East and the West, Absāl is poisoned by his brother's wife. Learning this, Salāmān executes his wife and retires to solitary meditation of God.

The next major use of the characters appears in the Treatise of Hayy b. Yakzān, written by the Andalusi philosopher Ibn Tufayl (q.v.). Ibn Tufayl states in his introduction that he composed the narrative to clarify what Ibn Sīnā referred to as the "oriental philosophy" (al-hikma al-mashrikiyya), and he refers to passages from the final chapters of al-Iṣārāt wa 'l-tanbīḥāt. Nevertheless, Ibn Tufayl's use of the characters is original, and his Hayy b. Yakzān is a significant philosophical composition in its own right.

In this narrative, Salāmān and Absāl appear toward the end of the story, after the main character,
Hayy b. Yakzan, has perfected himself and achieved a state of union with the Divine. Absal, who represents the inner dimension of religious spirituality, appears on Hayy's island seeking a place to engage in solitary spiritual contemplation. When the two meet, Absal learns of Hayy's spiritual attainments and becomes his disciple. When Hayy discovers from Absal of the existence of revealed religion among the latter's people, he decides to visit their island to inform them of the inner truths that their revelation contains. On the island, the two encounter Absal's friend, Salaman, who represents upright and sincere adherents to the external Assalam, the main rituals of the religion. Hayy finds that he cannot convey his spiritual and intellectual truths because the islanders are spiritually and mentally incapable of receiving them. So he and Absal return to their island to pursue their pursuit of truth away from society.

The last major version of a story using the characters of Salamán and Absál occurs in a narrative of the same name by the Persian poet, Džamí, which is included as one of several medallions in the poet's Haft awrang. Džamí's version (translated into English by the 19th-century poet Edward Fitzgerald) follows fairly closely the plot line of the Greek story summarised above (see Arberry, Fitzgerald's Salaman and Absal, which supplies two versions by Fitzgerald as well as a literal English translation of Džamí's Persian text). Džamí explains the allegorical symbols of his story at its conclusion.

Bibliography:

Salamanca [see Shalamanka]

Salamiyya, a town in central Syria in the district of DronJean (Nahr al-Asf), about 25 miles south-east of Hamá and 35 miles north-east of Hims (for the town's exact situation, see Kiepert's map in M. von Oppenheim, Vom Mitselmen zum Persischen Golf, Berlin 1899, 124 ff., and, 401; G.E. Geography Atlas of the World, 5th ed., Washington D.C. 1984, 178-9). Salamiyya lies in a fertile plain 1,500 feet above sea level, south of the Djabal al-Aská and on the margin of the Syrian steppe. The older and more correct pronunciation of this town's name was Salamyá (al-Ishákí, 61; Ibn al-Fakí, 110), but the form Salamiyya is also found very early (al-Mukaddasí, 190; Ibn Khurramaddáhi, 76, 98) and is now the form almost universally in use (cf. also Yákót, Mu'qam, iii, 123; Littmann, Semitic inscriptions, 169 ff.). The naša from the name is Salami.

The town seems to be the ancient Salamia or Salaminias, which flourished in the Christian period, but the references of the classical authors to this place are uncertain. Yákót, loc. cit., gives a popular etymology. The town, he says, was originally called Salam-mi'ta, after the hundred surviving inhabitants of the destroyed town of al-Mu'tafíka; the survivors then settled in Salamiyya and rebuilt it.

The situation of the town was important as an outpost of Syria, where main routes from the steppe (Palmyra) and Tójak joined; but it was never of any great military importance. Salamiyya was conquered by the Arabs in the year 15/636, and became one of the towns of the Qudn of Hims; it was only after 906/1500 in the Mamluk period that it was placed in the district of Hamát for administrative purposes.

During the 2nd/8th century, soon after the victory of the Abbásids, the Abbási Salíh b. Allí b. Abd Alláh b. Abí Abábs, and later some of his descendants, settled down in Salamiyya. In 141/758, Salíh b. Allí b. Abd Alláh had been appointed as the governor of southern and central Syria, and he paid some attention to reconstructing Salamiyya. The town is said to have been most indebted to Salíh's son 'Abd Alláh, who rebuilt it and developed the irrigation system of the locality and its environs (al-Ya'kıbí, Buldán, 324). This 'Abd Alláh was held in high esteem by his cousins, the first two 'Abbási caliphs. On his way to Jerusalem in 163/779-80, the caliph al-Mahdí stayed with 'Abd Alláh in Salamiyya and admired his house (al-Tabarí, iii, 500, tr. H. Kennedy, The History of al-Tabarí, xxiv, Al-Manjúr and al-Mahdí, Albany 1990, 215). In this same year, 'Abd Alláh, who had meanwhile married al-Mahdí's sister, was appointed as the governor of the al-Djazíra. There are more scattered references to the fact that many 'Abbási Hâshímids lived in Salamiyya from early 'Abbási times (see, for instance, al-Nisabúrí, Tútar al-imán, 115 ff., 125-5, tr. Ivanow in his Isma'íli tradition, 160 ff., 171-3; Ibn Hazm, Djamahar al-anasib al-'Arab, ed. 'Abd al-Salâm M. Hârûn, Cairo 1391/1971, 20; Idrís 'Imad al-Dín, 'Usân al-ábâbí, iv, 365, 402).

Almost nothing has survived in Salamiyya from this early 'Abbási period. There is the foundation inscription of a mosque on a stone (not in situ) at the entrance to the citadel. Although this inscription is dated 150/767-8 and it belonged to a mosque founded by those 'Abbási, which may have been destroyed later (about 290/903) by the Karmaítas who invaded the town. Still another inscription stemming from an 'Abbási has been found in the citadel; according to Littmann's plausible suggestion, it belongs with two other inscriptions to the period from 280/893-4. For another view, see Hartmann, Die arabischen Inschriften, 35).

The fact that Salamiyya was the centre of an important branch of the Hâshímids and the isolated position of the town perhaps account for its important role in the early history of the Ismá'ílí movement as the secret headquarters of the pre-Fátimí Ismá'ílí da'wá. According to the later Ismá'ílíis, the early Ismá'ílí da'wá was organised and led by a number of hidden imámns (al-Imám al-masturin), who were descendants of the Shi'í imám Da'far al-Sálih. It was 'Abd Alláh, a great-grandson of al-Sálih and one of these hidden imámns, who, after living in different localities in Khuzístán and Tójak, fled to Syria and eventually settled down in Salamiyya at an unknown date around the beginning of the 3rd/9th century. At the time, Salamiyya was held by the 'Abbási Muhamád b. 'Abd Alláh b. Salíh, who had transformed the
town into a flourishing commercial centre. The ʿAlid ʿAbd Allāh, the Ismāʿīlī leader who then posed as an ordinary Hashimid and a merchant, was granted permission by the ʿAbbāsīd lord of the town to settle there; later, he built a sumptuous palace for himself in Salamiyya which evidently continued to be used by his descendants and successors as the central leaders of the Ismāʿīlī daʿwā (see al-Nisābūrī, 116 ff., tr. Ivanov, 161 ff.; Idrīs ʿImād al-Dīn, iv, 357-66). Salamiyya served as the headquarters of the Ismāʿīlī movement until the year 289/902; it was from there that daʿwa were repeatedly dispatched for propagating the Ismāʿīlī teachings and initiating the daʿwā in different regions. These activities were greatly intensified around the middle of the 3rd/9th century.

ʿUbayd Allāh (ʿAbd Allāh), the last of these hidden imāms and the future Fāṭimīd caliph al-Mahdī, was born in Salamiyya in 259 or 260/873-4. In 286/899, he manifested his own rebellious intentions and led the Karmātī revolts of 3rd/9th century. ʿUbayd Allāh, soon initially remained loyal to ʿUbayd Allāh, had already left the town; according to van Berchem, it belongs to an emirate. Thus it passed to Ridwan, son of Tutuṣ, in 496/1102-3. In 532/1137-8, the Atabeg Zanīk b. Aḥ ṣunkūr, who was then besieging Hims, set out from Salamiyya on his campaign against the Greeks at Shāyzar (Ibn al-A ḥīrī, xi, 36 ff.), and in 570/1174-5 Salāh al-Dīn obtained the town together with Hims and Hamāt from the amīr Ṣafār al-Dīn al-Zafarānī (ibid., xii, 276). In 626/1229, we find the Ayyūbīd al-Malik al-Kāmil I in Salamiyya as a staging-post for ʿIrāk; the lord of Hamāt came there to submit to him. Two years later, al-Kāmil gave the town to Asad al-Dīn Shirkuh, who rebuilt the fortress of Shumaymīs north of it on one of the peaks of the Diĝabal al-ʾAṭā (ibid., xii, 318, 329; van Berchem and Fatio, Voyage en Syrie, i, 171, 329) which had been destroyed by the earthquake of 552/1157 (Ibn al-ʿAdīm, Zubdāt al-halab min taʿkīh Halab, i, ed. S. Dahan, Damascus 1934, 306, tr. E. Blochet, Histoire d’Alep, Paris 1900, 21). In 698/1299, the Egyptian army defeated at Salamiyya by the Mongols under the leadership of Ẓahāzān; thus the town lost its role as the brief Mongol occupation of the city of Damascus.

In the 8th/14th century, Salamiyya was part of the important frontier lands (called al-Sharkiyyya) of the mamluk of Damascus. Abu ʾl-Fidaʿ, in whose territory as lord of Hamāt the town lay during the Mamluk period, mentions an aqueduct between Salamiyya and Hamāt. In 726/1326, he went with his troops to clear out this channel (autobiography of Abu ʾl-Fidaʿ in RHC. Historiens Orientaux, i, 168, 185; tr. P. M. Bolt, The memoirs of a Syrian Prince, Abu ʾl-Fidaʿ, sultan of Hamah, Wiesbaden 1983, 18, 8S). This aqueduct no longer exists. Perhaps it is the same as mentioned by al-Dimāḫṣī (207) as in existence between Hamāt and Salamiyya and built by the ʿAbbāsīd ʿAbd Allāh b. Ṣalīḥ. At this time Yākūt (Muʿjam, iii, 123) speaks of seven prayer-niches near Salamiyya below which some ēbīṣīn or Successors were buried; he also mentions the tomb of al-Nuʿmān b. Bāshīr al-Ansāri, the companion of the Prophet.

Under Ottoman rule, the town gradually ceased to be of importance. By the early decades of the 13th/19th century, Salamiyya was entirely deserted and lying in ruins, probably on account of the lack of adequate protection against the Bedouins (see C. L. Meryon’s Travels of Lady Hester Stanhope, London 1846, ii, 93, 211-12, and L. de Laborde’s Voyage en
Orient, Paris 1838, ii, 13, who visited Salamiyya in 1813 and 1827 respectively). A new phase in the history of Salamiyya began in the middle of the 13th/19th century. It was at that time that Imam Muhammad, the Ismai'ili amir of Kadmus who had succeeded in establishing his authority over a large section of the Ismai'ili community in Syria and who had been outlawed earlier for his rebellious activities, was permitted by the Ottoman authorities to settle permanently with his people in an area east of the Orontes river. The Ismai'ili settlers were also exempted from military conscription and taxation. These arrangements were evidently confirmed by a fermân of Sultan 'Abd al-Medjid, dated Sha'ban 1265/July 1849. Ismai'îl b. Muhammad chose the ruins of Salamiyya as the site of his new Ismai'ili settlement. An increasing number of Isma'ili's from the western mountains gradually joined the original settlers in Salamiyya, attracted by the prospect of receiving free land in a district where they would furthermore be neither taxed nor conscripted (for details, see N.N. Lewis, The Isma'illis of Syria today, in Royal Central Asian Society Journal, xxxiv [1952], 69 ff.; M. Ghâlib, The Isma'illis of Syria, Beirut 1970, 156 ff.).

By 1861, Salamiyya had become a large village with numerous dwellings in its restored fort (J.H. Skene, Rambles in the deserts of Syria, London 1864, 158). Soon the Ismai'ili settlers, whose numbers increased continuously by new arrivals, established villages around Salamiyya, expanding the cultivable land of the district and improving its irrigation. By 1878, Circassians also began to migrate to Salamiyya. However, the bulk of the land of Salamiyya and its villages remained in the hands of the Isma'ili's. In time, the growth and prosperity of Salamiyya was officially recognised by the Ottoman authorities who, in 1884, created a special administrative district (kâda') centred on Salamiyya within the sandîq of Hamâr; a few years later, troops were stationed there, conscription was initiated, normal taxes were levied, and Salamiyya began to appear regularly in the annual Sâlâmâ-yi Şûrîye vilâyeti of the Ottomans. By the end of the 13th/19th century, Salamiyya reportedly had more than 6,000 inhabitants, with a good irrigation system (V. Cujinet, Syrie, Liban et Palestine, Paris 1896, 436, 453 ff.). The last major migration of the Syrian Ismai'lis to Salamiyya occurred in 1919; these settlers of the New Teaching (Djahriyya) and that of the Old Ch'ing source in the middle of the 18th century. The latter organised the Ismai'lis of Salamiyya and built their houses in a new quarter of the town known as the 'quarter of the Kadmusis'. In the present century, Salamiyya has become an important agricultural centre in Syria, where a variety of crops, including wheat and legumes, are cultivated.

In 1304/1887, the Ismai'illis of Salamiyya, who, like the bulk of the Syriani Ismai'lis, had hitherto belonged to the Muhammad Shahi branch of Nizârî Ismai'îlism, transferred their allegiance to the Kâsim Shahi line of Nizârî imâms, then represented by Agha Khân III. The latter organised the Ismai'illis of Salamiyya and also built several schools and an agricultural institution there. With a population of 95,000 in 1993, the great majority of whom are Nizârî Ismai'illis, Salamiyya now accounts for the largest concentration of Ismai'îlîs in Syria as well as in the Near East. In recent years, the Ismai'îli community of Salamiyya has benefited from the communal and religious activities of Agha Khân IV, the 49th and present imâm of the Kâsim Shahi Nizârîs, whose father Prince 'Ali Khân is buried in Salamiyya in a special mausoleum adjacent to the town's newly-constructed Ismai'îli centre (djâmâ at-ţâhâna).

SALAMIYYA — SALAR

SALAR, a Muslim and Turkic-speaking minority in Northwestern China. They are otherwise called Sa-la in Chinese. Their total population in the P.R.C. is about 69,000 and the greater part of them live in the Sala Autonomous Prefecture of Hsün-hua, Ch'ing-hai province; the population here was ca. 49,000 in 1984. The Salar oral traditions and religious practices were originally assimilated into those of the Turkmen nation distributed in the Samarkand region. The latter organised the Ismai'îli community of Salamiyya from the early 18th century. In 1781, this community broke out against the Salar, who had been divided into two sects, that of the New Teaching (Djahriyya) and that of the Old Teaching, but adherents of the New Sect were severely militarily repressed by the Ch'ing authorities. There were several rebellions of the Salar New Sect against the local authorities down to the late 19th century. The Salar at Hsün-hua consisted of eight kung (communities); the original (the Djahriyya community) with their base at Hsün-hua. They were engaged in farming, cattle-breeding, fishing, etc. In the Salar region, there were nine large, core mosques, each of which administered subordinate mosques.

Religious leaders of Salar mosques, on the lines of ahhhân, imâm, mulût, kâdhî and kâtib, were known: festivals, such as the 'id al-fitr, kurbân and barât were observed, and the Salar had tombs called šabbas
(generally called kumpei). The Salars are now officially recognised as one of the 55 minority peoples of the P.R.C., and they coexist with the Han Chinese.

**Bibliography:** Hsia-hua's 'The local gazetteer of the Hsin-hua Office' compiled in 1792; G. F. Andrew, The crescent in Northeast China, London 1921; N.N. Poppe, Remarks on the Salar language, in Harvord Journal of Asiatic Studies, xv/3-4 (1953); E. R. Tenishev, Salarisky yazık, Mos 1962; E. R. Tenishev, Salarisky tekitil, Mos 1964; J. Trippner, Die Salaren, ihre Glaubensstreitigkeiten und ihr Aufstand 1781, in Central Asiatic Journal, ix/4 (1964); Sa-la'ar Evliya Çelebi, A.d. Iran. Phil., 267, 274). The synonymous word in modern Armenian is not a survival of the ancient sarddr, but is a modern formation; indeed, the elements from which the ancient word was composed still exist in the modern language. The old Armenian took over the Pahlavi saddr̄ in the form sar̄d; the form sarddr which would give *sardar* in Armenian is not found in the latter language. A latter, probably modern Persian loan-word in Armenian is (say) sar̄ dar with *d* instead of *t*. On this and on other late Armenian forms, cf. Hübchmann, Arm. Gramm., i, 235, 239. In the first of these two references, the Pahlavi combinations of the word are also given. On the etymology, cf. also Horn, Grundriss der neuap. Etymologie, 153; Hübchmann, Persische Studien, ii; Junker, The Prohans in Pahlavi, Berlin 1912, 37, 79.

In the mediaeval Islamic Persian word and in those lands culturally affected by it, such as the central Arab lands of Trāk and Syria, the Caucasus, Central Asia and Muslim India, saddr̄ was essentially a military term, as e.g. in sipaḥ-sarddr̄ "supreme army commander", the equivalent in Persian of the Arabic amīr al-umara't, hādīd̄ al-hujd̄jd̄ar̄ or al-hajd̄jd̄ dar̄ al-kahār found amongst dynasties like the Sāmānids, Būyids, Ghaznawids and Great Saljd̄uj̄s [see Saldr̄s].

But saddr̄ by itself was often used for the commander of a town cheshmeh ('A city cheshmeh, 'A city chief of the Muslim ghāzis or fighters for the faith centred on Lahore in the Ghaznavid period and organised for raiding into the Hindu dār al-khuf (see Bosworth, The Ghaznavids, 114). Certainly in the 5th/11th century, various in the towns and districts of Khurāsān seem to have had sādr̄s leading local forces either for defence or for ghazw. The Sādr̄ of the district between Bādghis and Kubān̄ān̄ called Bāzgan was an active figure there in the events spanning the transition from Ghaznavid to Saljd̄uj̄ rule in Khurāsān during the 1030s (see ibid., 254, 261, 262-4), and some sources describe this Abu 1-kāṣim ʿAbd al-Ṣāmad al-Būzjānī as becoming the Sald̄uj̄ Toghr̄il Beg's first vizier (see H. Bowen, Notes on some early Sel-jukid viziers, in BSOAS, xx (1957), 105-7). Likewise, in Nīshāpūr at this time, a sādr̄ of what was perhaps a local militia is mentioned, and this command may have been based on the old nā ṣar̄̄d or nā r̄s [see R. W. Bulliett, The patricians of Nishapur, a study in medieval Islamic social history, Cambridge, Mass. 1972, 68-9]); he should be considered as a key figure in 429/1030 when it was a question of the establishing the authority of the dead sultan Māḥmūd of Ghazāna's son Masʿūd in Nīshāpūr rather than that of his brother Muhammad (see Ibn Fundūk, Taḥāfi-se-Bayhāk, ed. Bahmaniār, 267-8). There was a prominent family in Bayhāk, the Sālārīyān, the descendants of one Sālār Abū ʿl-ʿAbbās al-Muḥṣin al-Muttawwī, who had been head of the ghāzis and had fought at Tarūs (ibid., 124).

In administrative documents from mid-6th/12th century eastern Persia and Transoxania, sādr̄, together with such terms as mukaddam and sarhang, appears as a rank for commanders just below the supreme commander (H. Horst, Die Staatsverwaltung der Grosstürkhen und Hūnarmāhs (1038-1231), Wiesbaden 1964, 42, 47, 120, 160).

In general mediaeval Islamic usage, sādr̄ is also found—as far west as Mamlūk Egypt and Syria—in such compounds as ʿākhir-sādr̄ "head of the stables" and ḥāṣir-sādr̄ "steward", given that these high royal household offices were usually allotted to high-ranking Turkish military commanders.

(V. F. Bächner-[C. E. Bosworth])

**SALAR DJANG** (Sir), the title by which Mir Turāb ʿAlī, a Sayyid of Persian descent and one of the greatest of modern Indian statesmen, was best known.

He was born at Haydārbād, Deccan, on 2 January, 1829, and, his father having died not long after his birth, was educated by his uncle, Nawwāb Sirād̄ al-Mulk, Minister of the Haydārbād State. He received an administrative appointment in 1848, at the age of 19, and on his uncle's death in 1853 succeeded him as Minister of the State. He was engaged in reforming the administration until 1857, the year of the Sepoy Mutiny, when the Nīzām, Nāṣir al-Dawla, died and was succeeded by his son Afḍāl al-Dawla. The news of the seizure of Dilli by the mutineers greatly excited the populace, and the British Residency was attacked by a turbulent mob, aided by some irregular troops, but throughout the darkest days of the rebellion Sālār Djang not only remained true to the British connection, but strengthened the hands of his master and suppressed disorder. The services of the State were recognised by the rendition of three of the districts assigned in 1853 on account of debts due to the Company, and by the cession of the territory of the rebellious Rād̄jā of Shorāpur. In 1860 and again in 1867 plots to estrange the great Minister from his master and to ensure his dismissal were frustrated by two successive British Residents, and Sālār Djang remained in office. In 1868 an attempt was made to assasinate him but the assassin was arrested and executed, despite Sālār Djang's efforts to obtain a commutation of the sentence. On the death of Afḍāl al-Dawla in 1869, Sālār Djang became one of the two co-regents of the State during the minority of his son and successor, Mir Mahbūb ʿAlī Khan, and on 5 January 1871, he was invested at Calcutta with the insignia of the G.C.S.I. In November 1875, he and other nobles represented the young Nīzām at Bombay on the occasion of the visit of the Prince of Wales to India, and in April 1876, he visited England and was presented to Queen Victoria. He received the honorary degree of D.C.L. from the University of Oxford and the Freedom of the City of London. In January 1883, he was engaged in making preparations for the contemplation of the young Nizām to Europe, but on 7 February, after entertaining Duke John of Mecklenburg-Schwerin, who was visiting Haydarbād, on the Mir ʿĀlam Lake, he was attacked by cholera and died on the following morning. Though always known by his first title, Sālār Djang, he bore the higher titles Shūdw̄ d̄ al-Dawla and Mulk̄ t̄ al-Mulk.

**Bibliography:** Syed Hossain Bilgrami, Memoir of
The fact remains, however, that the word ‘salāt most often denotes this ritual prayer, the forms and rhythms of which evolved gradually, but which became at a very early stage a constitutive and distinctive element of Islam.

B. Importance of ritual prayer. There exist 65 instances of al-salāt in the singular with the definite article. These usages always seem to indicate a ritual prayer, this being a cultic act comprising certain prescribed gestures and words, which is considered the form of prayer most closely associated with the religion. Its importance is not determined only by the frequent occurrence of the root in the word. The Kur’ān opens with the ‘Fātiha, sūra I, and this is recited at every rak‘a. With its sober and full tenor, as with its wording in the first person plural, it is so well adapted to liturgical use that its composition for this very purpose can scarcely be doubted. Consequently, its location at the opening of the Kūrān gives a particular emphasis to salāt. The outstanding worth of the latter is again underlined in II, 3, and the remainder of the Kūrānic text corroborates this status.

Furthermore, the Book places the origin of ritual prayer, under divine guidance, at the outset of humanity. All the prophets practised ritual prayer (cf. XIX, 58-9, and 55; XXI, 73). Abraham appealed to his Lord to grant to him and his descendents, the privilege of performing salāt (XXIV, 37, 40). The obligation of ritual prayer was intimated to Moses in a particularly solemn manner (X, 87; XX, 14), and to Jesus in a quite different atmosphere (XIX, 31).

Thus ritual prayer belonged at all times to the correct and immutable religion which is professed as a hanīf [q.v.] (XXX, 30-1; XCVIII, 5). It is often said that the revealed Laws change with the Messengers of God, while the latter maintain the same proclamation of the Unique One (tawḥīd). This view of things needs to be extended. In the Kūrānic, ritual prayer is presented as the immediate and constant corollary of belief in God. Whatever variations may exist in the practical prescriptions, a salāt forms part of Hanīfism.

C. Salāt in the evolution of the Kur’ānic message. To the above-mentioned uses of the word in the singular with the definite article, there should be added two instances (both in XXIV, 58) of the singular in the genitive construction. Hence, in the technical sense of Muslim ritual prayer, there is a total of 67 uses in the singular without affix. None of them belong to the prae-masulār sūras, i.e. to the most ancient sūras of that which Blachère calls the first Meccan period (the verse LXXIII, 20 is, by general agreement, much later than the remainder of the sūra). It is possible that the word in question does not appear before the period which, on both sides of the Hidjra, extends approximately from 620 to 624. It is significant that there is a single example in the ḥaḍīthān sūras (in XXII, 38, in the context of moral advice).

On the other hand, II, IV, V, IX and XXIV, all of them Medinan and contemporary with or later than the changing of the kibla, contain 33 uses: half of the total in a text which covers no more than 20% of the length of the Kūrān. In other words, in the five sūras mentioned above, salāt is presented proportionally four times more than in the remainder of the book. This is no accident. The sūras cited correspond to the establishment of Islam as an institutional religion. Ritual prayer is a fundamental element of this, which accounts for the frequency with which it is mentioned.

This analysis is corroborated by the close link between salāt and zakāt, "purification" of riches through giving. These two practices are prescribed or approved of together at least 25 times: wa-aḵīma 'l-salāt wa-aḏāti

SALAR DJANG — SALAT 925

Sir Salar Jang, Shujjad ud-Daula, Mukhtar ul-Mulk, G.C.S.I. Bombay 1883; see also—H.H. the Nizam's dominions, (T.W. Hanc)
\textbf{926 ŠALĀT
'l-zakdt (IV, 77, etc.). Now it is known that the notion of alms is also expressed in the Kurgan by the word \textit{sadakta} (\textit{[a]}\textit{ča}) and by the verb \textit{anfaka} (to give of one's goods), and that the concept underlying the three Arabic terms has experienced an evolution: first, free giving from person to person, then religious obligation in the context of Islam. Ultimately the zakdt, enjoined especially in the five suras already mentioned, takes on the precise meaning of a communal tax. “Purification” is accomplished by contributing to the treasury of the community, and the distribution of these resources to the poor is also codified under eight headings in IX, 60. Mention of this obligatory tax alongside ritual prayer is further evidence of the communal importance and finality of the latter.

D. The times of \textit{salāt}. In sketching the general line of an evolution which ends in the establishment of prayer as a pillar for the religion of God and of His Messenger, a thorny problem has been left aside: which are, according to the Book of Islam, the hours and the times of official prayer? Was there in the lifetime of the Prophet a progressive organisation, the signs of which would be perceptible in the Kurān? To answer this question, it is not enough to base conclusions on the verses where the word \textit{salāt} is mentioned. It is necessary to take into account all the passages which mention a communal prayer of the disciples of Muhammad or present as a model his habits of prayer.

Muslim prayer is born from the personal prayer of Muḥammad. The most ancient Kurānic passages which give temporal indications are addressed to the Prophet. They all enjoin upon him nocturnal prayer (LXXIII, 2-7, etc.), and to this, one adds prayer at the setting of the stars (LII, 48-9), another, invocation of the name of His Lord at the dawning and at the declining of the day (LXXXVI, 25-6), the last, praise before the rising of the sun and before its setting (L, 39-40). No doubt from the same period is the reference to the gardens in the Garden of Paradise who previously prayed on the earth, keeping vigil into the last hours of the night (\textit{bi 'l-ashār}; LI, 16-18).

With different words, the same rhythms, still at Mecca but frequently maintained (XX, 130; XVII, 78-80; XL, 55), but it is soon observed that a prayer group is formed around Muhammad: “Enjoin \textit{salāt} upon your people” (XX, 132), “Stay with those who invoke their Lord” (XVIII, 28; cf. XXV, 64-5; XXXIX, 9).

In the years 620-4, the communal nature of prayer first becomes manifest. The most ancient prescription first addressing the community of disciples seems to be VII, 204-6 (cf. XI, 112-4). In XXX, 17-18, the commandment given them is to pray to God evening and morning, then comes this phrase: “To Him be praise in the heavens and on the earth, at the declining of the day (\textit{fādār}); and when you are at midday (\textit{wa-khīna tushhrān})”. To give here to the word \textit{ashhrā} a sense other than that which it habitually expresses in the Kurān (cf. XVII, 28 and XL, 55, parallels to XX, 130 or XLVIII, 9, etc.), would be arbitrary. On the other hand, the last section of the phrase does indeed seem to designate an additional time of prayer, the novelty of which is perceptible in II, 238: “Be steadfast in your prayers, in the median prayer as well (\textit{wa 'l-salāt 'l-ushār});…”.

The years following the changing of the \textit{kibla} see the consolidation of the institutional nature of prayer. Then, as noted above, the link between ritual prayer and the communal tax becomes a great deal tighter (LXXIII, 20, etc.). In IV, 103, a degree of organisational emergence: “Ritual prayer is enjoined upon believers at fixed times”. Finally, in XXIV, 58, on both sides of the middle of the day (cf. II, 238, quoted above), there are named incidentally “the prayer of the dawn (\textit{fādār})” and the \textit{salāt al-'Ashr}.

In the Kurān as a whole, the times of prayer are accompanied by a richness of vocabulary which shows a practice still at the evolutionary stage. There are, it seems, three essential times (to which the median prayer is added somewhat later).

(a) At one of the “two extremities of the day” (XI, 114; cf. XX, 29), the dawn prayer, \textit{fādār}, also called, with slight nuances, by a number of names: \textit{bukra}, \textit{ibkar}, \textit{ghfaddaww} and \textit{ghfadd}, as well as “before the rising of the sun” and “when you are in the morning”.

(b) At the other extremity, is the decline of the day, \textit{zahrij}, in other words the second part of the afternoon, in particular its final phase, \textit{aṣr}, \textit{fād}, to which apparently corresponds the \textit{salāt al-ashr} of XVII, 76, as well as “before the setting of the sun” and “when you are in the evening”.

(c) The nocturnal prayer is denoted by the verb \textit{tahdżid} (hapax in XVII, 79) and by expressions such as \textit{and} al-\textit{layl} or \textit{zulaf min al-\textit{layl}}. LXXIII, 20, recommends moderation in long vigils of prayer, and the explicit inauguration of the \textit{salāt al-'Ashr} could be ascribed to the same purpose. Alongside this daily division, prayer is subject to another temporal determination, this time in the weekly context. This is the Friday prayer, mentioned in a single passage of the Kurān: “O you who believe! When you are called to ritual prayer on the day of assembly, come quickly to the remembrance of God, leave your business” (LXII, 9; see \textit{DJUM} 114; cf. XX, 130), is the dawn prayer, \textit{fāy}, mentioned twice (V, 58; LXII, 9). The necessity of ritual purification before prayer is indicated in a detailed fashion in IV, 43, and V, 6, which both authorise \textit{tayammum}, this being the use of fine sand instead of water in the absence of the latter. Ritual prayer must be performed facing in a precise and constant direction. This direction is that of \textit{al-maqsid al-harām}, i.e. the Ka‘bah of Mecca. This is stated three times, more emphatically, in II, 142-50. This outstanding passage, which can be dated with certainty in the year 2/624 (probably in the middle of the month of \textit{Sha‘bān}, corresponding to mid-February, or possibly a month earlier, in \textit{Radjab}), does not confine itself to instituting the \textit{kibla}. It enjoins upon the believers the abandonment of a former \textit{kibla}, which according to all extra-Kurānic evidence was the direction of Jerusalem (almost the opposite in fact, for Muslims then living in Medina). A problem remains: what was the \textit{kibla} before the \textit{Hijdra}? It was definitely the direction of Jerusalem, but: (1) the Prophet had probably approved it for the \textit{Anṣār} of \textit{Yaḥrib} two years before emigrating to there (cf. al-\textit{Tabari}, \textit{Qāmāt}, ii, 4, 5, 12); but he did not adopt it himself until later, if the account of al-Barā‘ī b. Mā‘ūrū is to be believed (cf. Ibn \textit{Hādīm}, 294; al-\textit{Tabari}, i, 1218-19), (2) the former \textit{kibla} of Muhammad in the city of his birth remains uncertain. On these questions, see \textit{KIBLA}.

Whatever the case may be, ritual prayer is animated in its entirety by two internal movements, glorification (\textit{tasbih}) and praise (cf. \textit{hamdula}; and see XX, 130; XXXIII, 42; XL, 55; L, 39-40, etc.). Appeal for pardon is sometimes included here (XL, 55; cf. III, 17; VII, 204). These sentiments are inseparable from contrasting physical attitudes: stand-
ing upright and prostration (cf. II, 238; IV, 102; L, 39-40, etc.; in addition, for nocturnal prayer, XXV, 64; XXXIX, 9). The technical term rak'a is absent from the Qur'an, but bowing is often expressed by the corresponding verb, normally in association with prostration (V, 55; IX, 112; XLVIII, 29); however, it is not clear that these prostrations form part of salāt (cf., in addition, II, 43; III, 43; XXII, 26 and 77). On the other hand, public reading of the Kur'ān is a manifest and vital element of it (VII, 204-6; XVII, 78; XVIII, 27-8; XXXIX, 45; XXXV, 29; LXXIII, 20, etc.).

II. In hadith and legal elaborations.

The two principal Sunni canonical collections of prophetic traditions both begin with hadīths on the five pillars of Islam. After the affirmation of faith, they therefore deal with ritual prayer. Among the ‘ihdād, it is this which occupies by far the greatest amount of space in their work: 200 pages in the work of al-Bukhārī, and more than double this in Muslim's. This vast quantity of material is organised by both in a series of ‘books' (kittab), which form three major blocks. First is the sine qua non condition of ritual prayer, this being legal purity (tahāra): to which correspond in al-Bukhārī's case books of ablation (see wudu?), of general washing (see ghusl), of menstruation (see haway), of washing with fine sand (see ta'ammum). Then come traditions which determine general aspects and elements of salāt. Finally, numerous books examine particular cases, such as the prayer of major festivals or that of funerals. This general organisation is not peculiar to the two Sakhis but also belongs, with minor variations, to the other four canonical collections.

In the 3rd/9th century, when all these works were compiled, the time-table and conduct of prayers were fixed. Their detailed rules will be presented below in section III. They were liable to vary all the less in that judicial consideration of these fundamental matters had also, by this stage, been basically concluded. It was, in fact, the 2nd/8th century which saw the activity of the scholars who gave their names to the four schools of law. The obligation to participate in communal prayer is clearly the mosque: see masjd, ut-

9. Tidjar. In Kur'an XVII, 110, the text reads “Do not raise your voice in your prayer, and do not pray in a whisper, but seek a way between the two.” On the basis of a khabar of Ibn 'Abbās, the commentators see in this a measure of caution in the face of Meccan unbelievers (e.g. al-Rāzī, xxi, 70; al-

1. General principles of prayer.

1. Prefixed institutionalisation. The salāt of the traditions is entirely ritual, and linked to five times of the day. This divine determination is presented in two different manners. On the one hand, hadīths related by Anas b. Mālik (sometimes quoting Abu Dharr, sometimes Mālik b. Ša'ā’u) describe an ascension of the Prophet into the heavens, where he ultimately receives from God Himself, after some haggling, the prescription of five daily prayers for his community (al-Bukhārī, salāt, bāb 1 and Manāqib al-Ansār, bāb 42; Muslim, Iman, nos. 259, 263, 264). On the other hand, Ibn Šihab al-Zuhār records a hadīth related by Abū Mas'ūd al-Ansārī according to which Gabriel descends five times to Muhammad to induce him to pray, implicitly at the prescribed times (al-Bukhārī, Manāqib, bāb 1; Muslim, Masājid, nos. 111-13; Muslim, Salāt, nos. 72-6), as by the invocation “To you be praise, our Lord!” said in response to the imām's utterance “God hears him who praises Him” (see below, section III, B, third element of the rak'a), and, furthermore, by the final salutations of the imām and of the other faithful. The obligation to participate in collective prayer is more strongly asserted by the Mālikīs (al-Malākūtī, 166-7) than by the Hanafīs (al-Qāwūdī, 132 ff.). The participation of women is permitted, but not recommended. The favoured place for communal prayer is clearly the mosque: see masjid, i, C, 2.

8. The imām. For communal prayer to take place, two adults must be present, one of whom is the imām of the other. The imām is the sine qua non condition of congregational prayer. Numerous prophetic traditions determine his function. They are conveniently listed by Muslim, Salāt, nos. 77-101, and by al-Bukhārī, Salāt, bāb 43 ff. The imām must be male, of good reputation, educated. As a general rule, the faithful place themselves in ranks (yufjuf [see sāff]) behind the imām, perform the ritual gestures with him, and repeat his words. If there is only one man with the imām, he places himself to his right; if there are two or more, they place themselves behind him. Women are allowed to place themselves behind the men; if there is only one woman with the imām, she places herself behind him.

9. The djuhr. In Kur'ān XVII, 110, the text reads “Do not raise your voice in your prayer, and do not pray in a whisper, but seek a way between the two.” On the basis of a khabar of Ibn 'Abbās, the commentators see in this a measure of caution in the face of Meccan unbelievers (e.g. al-Rāzī, xxi, 70; al-
Kurtubi, x, 343). But traditions show that Muhammad, at Medina, said certain prayers in a loud voice (dāhhr) and others in a whisper (cf. al-Bukhārī, Adhān, bāb 96, 97, 99, 100, 105, 108, etc.). From this it has been concluded that the Qur'ānic verse was calling not for a happy medium, but for an alternation of the two styles. As a result, the imām is obliged to declaim in a loud voice the first two rakās of specific prayers, and in a whisper the other contingent rakās of these prayers and all the rakās of the other prayers (cf. al-Ghāwadī, 128-9; al-Malātāwī, 136-7).

10. *The tawāmūn.* Prayer must be performed soberly and calmly, with close attention to the rhythm and to the intonations. The Prophet making a worshipper who had neglected this principle start again three times (al-Bukhārī, Adhān, bāb 95, 122; Muslim, Salāt, no. 45). All the authors make this one of the fundamental requirements of ritual prayer (cf. Ibn ʿAbd al-Wahāb, 31, 36; al-Ghāwadī, 127-8; al-Malātāwī, 135).

B. Various aspects. Anyone who has inadvertently omitted or misplaced one of the elements of the prayer and becomes aware of this before the end of the latter is obliged to perform or recast this element and furthermore, at the end of his prayer, to add immediately the "prayer of negligence" (salāt al-sahā). This consists of performing two prostrations of the prayer and becomes aware of this before the end of the fundamental requirements of ritual prayer (cf. al-Bukhārī, Adhān, bāb 95; Muslim, Salāt, no. 45). All the authors make this one of the fundamental requirements of ritual prayer (cf. Ibn ʿAbd al-Wahāb, 31, 36; al-Ghāwadī, 127-8; al-Malātāwī, 135).

1. The prayer of the morning (subh) or of the dawn (fadjr) is of two rakās. Here the Fāṭiha and the Kurān are recited in a loud voice (dāhhr). Its time begins with "the true dawn" (al-fadjr al-jāhil), when faces can still not yet be recognised, and extends until the day-break as such, before the sun appears.

2. The prayer of midday (zuhr) is of four rakās. Here the Fāṭiha and the Kurān are recited in a whisper (isrār). Its time begins when the sun, passing the zenith, commences its decline. It normally continues until the time when the shadow of objects is equal to their height.

3. The prayer of ʿasr (middle and late afternoon) is of four rakās. Here the Fāṭiha and the Kurān are recited in a whisper (isrār). Its time begins when the shadow of objects is equal to their height, and it normally continues until the time when the light of the sun turns yellow; but this prayer may still be performed until the end of the day, before the setting of the sun.

4. The prayer of maghrib (after the setting of the sun) is of three rakās. Here the Fāṭiha and the Kurān are recited in a loud voice. Its time begins when the sun has disappeared beneath the horizon, and normally continues until the disappearance of the twilight radiance or ṣafak [v. o.]. (Concerning the ancient Judaising deviation of Abu ʿ1-Khattāb, for whom the time of this prayer would begin only when the stars shine brightly, see Wasserstrom's article, in Bibl.).

5. The prayer of ṣūrūt (evening or beginning of the night), sometimes called ʿutamā (black night), is of four rakās. Here the Fāṭiha and the Kurān are recited in a loud voice. Numerous traditions clearly fix the commencement of its time (e.g. al-Bukhārī, Musāfīr, bāb 24, 1; repeated in Adhān, bāb 102, 1; al-Bukhārī, ʿUrma, bāb 20, 1, parallel to Dīghāt, bāb 136, 2; and to Muslim, Musāfīrīn, no. 43; Muslim, Musāfīrīn, no. 48): it is the disappearance of the ṣafak, that redness of the sky which follows the setting of the sun (cf. L'Α, x, 180a; the opinion of Abū Ḥanīfa, who interpreted this ʿṣafak as the whiteness of the twilight coming after the redness of the sunset, seems to be isolated). It should be recalled that, in the Kurān, the word only occurs once, without connection with prayer and in an oath (LXXXIV, 89). Concerning the whereabouts of the ṣafak, cf. other commentators of the Tabārī, xxx, 119, and al-Rāzī, xxxi, 108-9). As for the symmetrically converse phenomenon in the circadian cycle, i.e. the column of zodiacal light called in Arabic al-fadjr al-kāfīb "the false dawn" (or ṣanāna al-sūrūt "the wolf's tail": cf. L'Α, s.v. fj-dj-r, at v, 45a),
the Muslims astronomers have made a detailed study of it which is of no relevance to this article. The normal time of the prayer of *ṣalāt* extends until the end of the first third of the night.

For more details concerning the times of prayer, with references to *ḥadīth* and Muslim law.

B. Conditions and development of prayer. The conditions (*ṣuhrūt*) of prayer are nine in number according to Ibn ʿAbd al-Wahhab (al-*Usul*, 26-30): 1. Being a Muslim; 2. Mental health; 3. Discernment, i.e. the age of reason (seven years); 4. and 5. Ritual purity (see ʿTāḥāra and this article, above, section II). This is attained on the one hand by *wudūʾ* or by *ghaṣi*, which respectively annul the minor *ḥadāth* and the major *ḥadāth*.

On the other hand purity demands the elimination of any blemish (*khiyāt*) from the body, the clothing and the place: this is the *ṭāḥāra ḥakikīyya*, "real". It is impossible to emphasise too much the considerable importance and the minute precision of the corresponding requirements; see also *Najūṣ* (*im-ṣadkhāṇa*).

6. The worshipper prays to himself a second time, saying *Allāhā akbar*, then he says three times *Subhāna rabbiya* "Glory to my Lord, the Most High!" The body should then rest on the forehead (and the nose), the palms of both hands, both knees and both feet.

5. The worshipper raises his head to say *Allāhā akbar*, then he sits on his heels (*qulūs* or *kuṣūd*), knees on the ground, hands placed on the thighs. Then he says *Rabbī gīfīr lii ʿO My Lord, pardon me*.

6. The worshipper stands in itself a practice which is now widespread among the Mālikis.

He then stands upright for the second *rakʿa*, identical to the first.

At the end of this second *rakʿa*, instead of standing upright, the worshipper raises his head to say *Allāhā akbar*, then he sits on his heels, knees on the ground, hands placed on the thighs. The *taʿthahhūd* "affirmation of faith", is then said, as follows: *al-ṭayyīḥāt li- ʿLāh, ʿl-ṣalāwa sīwā ʿl-ḥayāyāt. Al-ṣalāmu ʿalayka, ayyuḥā ʿl-naḥī, ʿwā-rahmatu Lāhī ʿwā-haqqāţu. Al-ṣalāmu ʿalayna ʿalā ᵃl-bādi Lāhī ʿl-sāliḥīn. Aḥhadū an lā lāhā illā Lāhī wadallahu lā shirkaka lāhu ʿwā-ṣṣāhādu anna Mūhammadan ʿabdhuha wā-rassāluha ʿl-ʾaṣlāmu* "To God be salutations, prayers and fine words. Peace be upon you, O Prophet, also the mercy and blessings of God. Peace be upon us and upon the good servants of God. I affirm that there is no god other than God, He alone, who has no partner; and I affirm that Muhammad is His servant and His Messenger*. At the beginning of this last phrase, the index finger of the right hand is raised to underline the declaration of Uniqueness.

The *taṣaḥḥud* above is the version given in al-*Bukhrā*, *Adḥān*, bāb 48, 150 (cf. Muslim, *Ṣalāt*, no. 55). The beginning of the formula differs slightly among the Mālikis (cf. al-Malātāwī, 147).

After the *taṣaḥḥud*, the worshipper stands up to say, as above, the third and the fourth *rakʿas*.

At the end of the latter, the *taṣaḥḥud* is recited again, with the following addition: *Allāhāmuta sīwā ʿl-ʾaṣlāmu ambī Muhammadan wā-ṣalā ᵃl-ʾaṣlāmu ᵃl-ʾaṣlāmu ambī Muhammadan wa-*ṣalā ᵃl-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan wā-ṣalā ᵃl-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan wā-ṣalā ᵃl-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan wā-ṣalā ᵃl-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu ambī Muhammadan kamā bāka ʾal-ʾaṣlāmu* "O God, bless Muhammad and the family of Muhammad as You blessed Abraham and the family of Abraham, and bless Muhammad and the family of Muhammad as You blessed Abraham and the family of Abraham in the worlds. You are worthy of praise and of glory!" This formula (called *al-ṣalāwa al-ʾaṣlāmīyya*) is inspired in part by Kurṭān, XXXIII, 56, and XI, 73, and is found in this form in al-*Bukhrā*, *Anbiyya*, bāb 10, 5; Muslim, *Ṣalāt*, nos 65-6 (cf. also al-Malātāwī, 148-9; Ibn ʿAbd al-Wahhab, 38-9; al-Ghawīdī, 142).
Finally, still sitting, the worshipper turns to the right, saying al-saldmu ^alaykum wa-rahmatu Lldhi ... to overtake the unbelievers. May the blessings and the peace of God be upon our master Muhammad, and upon his Fami-

C. Actual practice. Having just described the performance of this ritual prayer, having earlier outlined the other rules regulating it, it would now be appropriate to examine how it is practised in reality. Countries, the first back in, is the only observance in this regard than others, as is easily ascertained. But precise studies seem to be lacking on this subject. Such studies could, according to countries or regions, identify the practice of salât by men and women, individually or communally, for the daily prayers and for the Friday prayer, and enquire, naturally, into the contingent effects of urbanisation, of change of social class, of emigration to a country with a non-Muslim majority.

IV. The other ritual prayers.

These are, like the preceding, prayers codified by fiqh and comprising the performance of a fixed number of rak'as. Numerous and varied, they are generally classified by the jurists according to their degree of obligation, which can vary according to the schools (farâd, wâjdîb, sunna). Principal aspects will be presented here in the following order: (1) The major community prayers which mark the week and the year (A and B); (2) The daily prayers which are not strictly obligatory, i.e. which do not form part of the farâdî (C, D, E); (3) Prayers which are performed in particular (F) or exceptional (G, H, I) circumstances; and (4) Finally, the prayer over a deceased person (J).

A. The Friday prayer (salât al-djum'a). The second Arabic word, which now denotes the above-named prayer, is the Sunday. The first to have given the name of djum'a, was nothing other than a market-day. It was usually known by another name, yaum al-saldt or, without the article, yaum 'arâba or, according to the text, yaum 'arâba (see L'A, s.v. 'arâb, 1, 593; al-Zamâkhi, Kashshîf, on LXII, 9, and al-Kurûbî, xviii, 97: according to a khabîr of these two commen-
tators, the first to have given the name of djum'a, was allegedly Ka'b b. Lu'ayy, an ancestor of Muhammad, who lived some 150 years before him).

The Friday prayer is performed at the time of the midday prayer, which it replaces. It must take place in a mosque. It is only obligatory in substantial localities, and with the participation of a minimum number of men who are permanent residents, this number being (including the imâm) four according to the Hanafis, three according to the Shafi'i, and two according to the Malikis. Women may participate, but it is not compulsory for them, and they are not included in the required number.

It is customary that the Muslim arriving at the mosque for this communal prayer first performs individually a prayer of two rak'as. After the call to prayer, the preacher, standing upright on the mustâqîm [q.v.], delivers a double sermon [see kwâ'ima]. Both praise God and call for His blessings on the Prophet, before exhorting the believers. The two sermons are separated by a short pause, during which the orator sits. Subsequently, he normally leads personally an obligatory prayer of two rak'as, in a loud voice.

B. The prayer of the two feasts (salât al-îdâ'ayn). See 59. The two feasts are that of the breaking of fasts and that of sacrifices. The special prayer, in a very festive ambience, is of two rak'as, in a loud voice. Its time begins approximately half an hour after the rising of the sun, and concludes when it is at the middle of its course. There is neither adâh nor ikâmâ. But numerous takâbît are added, their number and place varying slightly according to the judicial schools. At the first rak'a, the sâra al-îdî (LXXVII) is usually read. The prayer is not preceded, but followed by a double kwâ'ima. The performance of the special prayer, and relating to the cultic duties of the feast being celebrated, as well as their religious significance. Although women are not obliged to do so, they are strongly advised to attend, even in a state of ritual impurity (in which case they are present for the prayer without performing it), in order to share in the communal joy and edification; cf. e.g. al-Bukhârî, ìdayn, bbd 15, 21; Muslim, ìdayn, nos. 10-12. In Joumier, 45-50, a detailed description is found of the prayer of the feast of sacrifices performed in Cairo in 1379/1960.

C. The salât al-û'îrî. According to the Hanafîs, it is a duty (wâjdîb) without being an obligation (farâdî) in the sense which they give to this word. But for the other schools, it is only a custom (sunna), albeit a particularly strong one (ma'âkkâda). The salât al-û'îrî should be performed between the evening prayer and the dawn prayer (preferably towards the end of the night). For its history, see witr. The term signifies "uneven" and denotes a special rak'a which is performed in isolation or which is added to one or more pairs (shaf'î) of rak'as. It is forbidden to perform other rak'as between this latter rak'a and the canonical prayer of the dawn. The prayer of û'îrî is generally of three rak'as; there are read, respectively, after the Fûthus, the prayer is a particularly strong one. The Malikis, al-Malâkàwî, 196, or LXXVII (al-îsâ'), CIX (al-Kâfûnî) and CXII (al-âhîlâs) according to the Hanafîs al-Ghawîdî, 188. With the prayer of û'îrî the question of kunît is associated. In the article kunût the various senses of this word in the Kur'âûn and in tradition are set forth. The Mâlikîs deny that there is a kunût in the prayer of û'îrî (al-Malattâwî, 196). The Shâ'îs use a formula transmitted by al-Tirmîdî, the translation of which is to be found above, vol. V, 795. The Hanafîs (al-Ghawîdî, 188-9) consider as a duty, after the performance of the third rak'a, a duo'â al-kunût which begins with Allâhumma, inna nasta'mina wa-nastâ'ahdika. The translation is as follows: "O God! we ask for Your aid and Your guidance. We implore Your pardon and return to You. We believe in You, we submit ourselves to You, we praise You for all Your goodness. We are grateful for Your favours and not ungrateful, we exhort and who are unfaithful to You. O God! it is You that we worship, to You that our prayers and our prostrations go, towards You that we return with promptitude. We hope for Your mercy and fear Your anger: for Your goodness. We are grateful for Your favours. We implore your aid and your guidance. We ask for Your protection and your help, for Your宠爱 and Your might. We are thankful for Your kindness and Your mercy. We are grateful for Your protection and Your help. We ask for your protection, O God!"
ly and his Companions!" This text, in a slightly shorter form, is found in Abū Dāwūd (Marāṣīl, htb mā du`a fi-lam nāma `an al-ṣalāt, 12-13), according to whom it was formulated for Abū Mūhammad by Ḏiqrībī himself. As for the Imāmīs, on the contrary, for them the ḳunāʿ is a personal prayer of intercession (du`āʾ), optional and meritorious, which is definitely said during the witr, but which is also said in each of the five daily prayers, while standing, between the Kurʿānic reading of the second rakʿa and the inclination which follows. This Ḡfīr ḳunāʿ is of free content, but certain formulas are frequently used, in particular, the prayer mentioned in Kūr̄ān, ii, 201.

The nocturnal prayer. See ʿahdīqīṣun and, for the prayers specific to the nights of Ramāḍān, ʿaṣāwīṣun.

E. Other supererogatory prayers (naʿṣāfīl).

These are in particular groups of two or four rakʿās, the performance of which is recommended, according to the circumstances, before or after one or other of the five obligatory prayers (cf. al-Ḡawdiḍī, 204 ff.; al-Malāṭwī, 157-8). But it is also possible, for example, to perform the prayer of the morning (ṣalāt al-dūḥā), of two rakʿās at least, its time begins approximately half an hour after the sunrise, and continues until midday (like the prayer of the two feasts).

F. Prayer on a journey (ṣalāt al-musdfīr). The text reads in Kūr̄ān, iv, 101, "And when you are travelling through the land, it is no sin for you to shorten your prayer if you fear lest the unbelievers put you to the test; the unbelievers are for you a declared enemy" (cf. al-Rāzī, xi, 16-23; al-Kūrtūbī, v, 351-62). This verse has been clarified, and its import extended to all journeys, by prophetic traditions, two in particular (Muslim, Musafīrīn, nos. 4, 8). The outcome of later elaborations is that the canonical prayers of zuhr, ʿṣr and ṣaḥr are reduced to two rakʿās (instead of four) during every lawful journey of more than approximately 80 km/50 miles (sixteen parasangs for the Mālikīs and ʿṢāḥīfīs, three days' walking for the Hanafīs). The journey is regarded as continuous unless it is broken by a halt of 15 days, according to the Hanafīs (al-Ḡawdiḍī, 27), or four full days according to the other schools (al-Kūrtūbī, v, 357; al-Malāṭwī, 179-80). The distance alone is taken into consideration, whatever the means of transport, and the duration of the effective displacement. Unlike the other schools, the Hanafīs regard the above-mentioned abridgement, not as something permitted but as a duty (wa`ādīb), as a result of this, in the case of error on the part of the believer in the course of the prayer, or if he performs it behind an imām who is not himself travelling, precise judicial consequences ensue. The prayers of ṣuḥb and of maghābī remain unchanged.

G. The prayer of the eclipse. See ʿALAM KAW." The prayer appealing for rain (ṣalāt al-ʿistisassītā'). This is a communal prayer, the time of which is the same as for the two feasts (above, B). But it takes place in an atmosphere of penitence and of supplication, in ordinary clothing and in the open air. Two rakʿās are performed. At the beginning of each, the imām appeals at length for the pardon of God. He then delivers a double ḡwākī (as in B above), exhorting the congregation to practise good deeds. At the end, facing the kḥīla, he turns his cloak inside out (a symbolic gesture, magical in origin), members of the congregation do the same, and he begs at length for the coming of rain. This ritual is based on the example of Mūḥammad who, in his supplication, raised his hands high towards the sky (cf. the little "books" on istisassītā' which are located in the two ʿṢāḥīfīs, between the prayer of the two feasts and that of the eclipse. See also al-Malāṭwī, 200-1; al-Kūrtūbī, i, 418, xviii, 302, respectively on Kūr̄ān, ii, 60 and LXXI, 10-11). On rogatory rites in pre-Islamic Arabia, see ʾBIST."
Muslims, even those guilty of serious sins, except for “heretics” and declared rebels (ahl al-bida' wa 'l-baghdāti). Although suicide is denounced by Islam, the practice of reciting prayers is performed over those guilty of this, according to al-Ghāwūdji, 180, and al-Malātāwī, 211, 1, 8. For mortuary ablutions and the burial itself, see DIAZĀZA.

V. Ṣalāt and Islam.

A. The position of ṣalāt in relation to other religions. When Islam came into existence, and spread rapidly to the Near and Middle East, it came into contact with, besides traditional cults and gnostic sects, with four organised religions. Rabbinical Judaism, within a liturgical system which was essentially synagogal, already included three daily prayers which the believer is required to recite, even in isolation: at dawn (shaharit), in the afternoon (minḥa) and the evening (arvit). These tefillin have a communal nature which is demonstrated by the use of the plural in their formulas. Syriac (or Byzantine) Christianity, although admittedly less actively manifest than the others, was far from being dead; it was to show itself unexpectedly active in the first two centuries of the caliphal empire. It is known that the Manichaean “hearers (auditores)” (as distinct from the “electi”, to whom they were subordinate) were under an individual obligation to perform four prayers every day at fixed times (cf. Ibn al-Nadīm, Fihrist, ed. Taqīddud, 396-7, tr. Bayard Dodge, The Fihrist of al-Nadīm, 790-1; al-Shahrastānī, al-Miṣl al-wa'īl, ed. Badrān, 629, tr. G. Monnot, Livre des religions et des sectes, i, 661). These ritual prayers were a sequence of prostrations, accompanied by praises to higher beings, and punctuated by return to the upright position. The formulas of adoration seem to have been impersonal, but with reference to Mani as “our Guide”, in the plural (ḥādīn in the text of the Fihrist). Mazdeanism, finally, imposed on each Zoroastrian the ritual of five daily prayers, to be said individually at prescribed times (cf. Mary Boyce, Zoroastrians. Their religious beliefs and practices, London 1979, 32-3; eadem, Ṣardshān, Costa Mesa, Calif. 1992, 138-9; J. Duchesne-Guillaum, La religion de l'Iran ancien, Paris 1962, 76, 2).

Five daily prayers: this is the rhythm of ṣalāt. It is known that Ignaz Goldziher saw here, not the simple chronology, but the result of a “Persian” influence (Islamisme et païsisme, in RHR, xxii [1901], 15, repr. in Gesammelte Schriften, Hildesheim 1970, iv, 246). It seems, indeed, inappropriate to attach too much importance to the number of prayers, the result of a collective evolution rather than of deliberate organisation. A comparison between religions would more justly serve as a model of correct practice. Without intermediary or intercession on the earth, the believer acts spiritually only on his own account (cf. Kurān, II, 48; VI, 164; etc.; R. Arnaldez, L'Islam, Paris 1988, 22, 28). This general flavour was to be further accentuated by the Šūfīs. As far as ritual prayer is concerned, even when it is practised communally, the Muslim is alone before God, and unbelief, there is only the abandonment of ritual prayer” (Muslim, Imdān, no. 134); and “He who performs our
ritual prayer, and turns towards our kibla, and eats animals slaughtered according to our manner, he is the Muslim" (al-Bukhārī, Salāt, bāb 28). It is impossible to exaggerate the importance of the kibla. By turning from all quarters towards the symbolic place given by God to their Prophet, the Muslims converge, and their prayer thereby acquires, much more than by virtue of the contiguous public performance of this individual rite, a communal nature. It is therefore not surprising that the simple words ahi al-kibla, meaning the people who maintain that prayer must be performed in the direction of the Ka'ba, have often been used to describe the members of the community (cf. Ibn Mājah, Dāna'īx, 31, one of the earliest instances of this usage).

On the other hand, salāt maintains incessantly the link between the Muslim and his Prophet. The latter is mentioned twice in the tasbih, of which the second phrase is addressed directly to him. As for the prayers known as 'Abrahamic' (cf. above, section III. B), they could be called Muhammadan, since the prayer and its sacrificial offering, the performer and the rules governing the ablusion or the combination of daily prayers as well as the performance of other ritual prayers, are based on the personal authority of the Prophet, in other words on the exemplary and inspired practice of the one of whom it is written, "In the Messenger of God, you surely have a fine model" (Kūr'ān, XXXIII, 21; cf. al-Bukhārī, Wūr, bāb 5; Muslim, Mustafirrīn, no. 36). Irrespective of the fact that the Prophet has reported, the rule of the prayer is expressed in the words "I have seen the Prophet do thus" (al-Bukhārī, Salāt, bāb 50; cf. Adānān, bāb 95-6 etc.). In point of fact, salāt is an imitation of Muhammad.

However, the essence of salāt is elsewhere. It is towards God that the Muslim turns his face (cf. Kūr'ān, VI, 79). Hence the value of prayer. It may be asked if prayer and its sacrificial offering, the prayer and the sacrifice of the community, bear the mark of the Prophet. The Kurgan, as has been seen, firmly lays down the principle of salāt and its major characteristics. But almost all the details of its ritual, the temporal limits of its performance, and the rules governing the ablusion or the combination of daily prayers as well as the performance of other ritual prayers, are based on the personal authority of the Prophet, in other words on the exemplary and inspired practice of the one of whom it is written, "In the Messenger of God, you surely have a fine model" (Kūr'ān, XXXIII, 21; cf. al-Bukhārī, Wūr, bāb 5; Muslim, Mustafirrīn, no. 36). Irrespective of the fact that the Prophet has reported, the rule of the prayer is expressed in the words "I have seen the Prophet do thus" (al-Bukhārī, Salāt, bāb 50; cf. Adānān, bāb 95-6 etc.). In point of fact, salāt is an imitation of Muhammad.

The faithful of Islam were directed towards this spiritualisation by baḥīfūn such as the following, recounted by Abū Hurayra: "It is when he is in prostration that the man is closest to his Lord" (Muslim, Salāt, no. 215). Another form of the same tradition, this time recounted by Ibn Maṣṣūd, is mentioned by al-'Tabarsī/Talibīsī, Mofdīna al-bayān, in his commentary on a striking commandment of God to his Messenger, "Prostrate yourself and draw near!" (XCVI, 19). Mystics have specifically applied to ritual prayer the definition of isba by the tashāhhdūf of Gabriel, "Good conduct is to worship God as if you saw Him: for He hears not the words of the heart, but He sees them" (al-Bukhārī, Ḥanīf, bāb 37; Muslim, Ḥanīf, no. 1). Al-Qazālī devoted to ritual prayer the fourth volume of his interpretation of the 'ibādāt in the Iḥyā. Here he insists on humility as the basis of a true prayer, and on the "presence of the heart" which must accompany it throughout. These are the same central perceptions as those shown by al-Rāzī in his commentary on Kūr'ān, XXIX, 45: "Recite that which has been revealed to you of the Book and imitate the ritual prayer, for ritual prayer banishes lewdness and that which is denounced...". The author of the Maṣāfīth al-ṣna'uh poses an analogy: "If a sweeper wore a garment of gold brocade, it would become impossible for him to concern himself with filth. Similarly, the man who performs prayer has put on the garment of religious fear (tashnā), for he stands in the presence of God, the right hand placed over the left hand, in the attitude of one who looks upon a majesty king. The garment of religious fear is the finest of garments: it is more noble for the heart than is gold brocade for the body. Also, the man who wears it cannot concern himself at all with the filth of turpitude" (xviii, 72-3). This king, quite evidently, is the King of the Day of Judgment. This conviction gives meaning to the salāt which numerous Muslims have sought to perform immediately before their death (cf. for example al-Maṣṣūdī, Murujī, §§ 1774, 3361).

The Sūfis were to do nothing in this context other than to develop, sometimes magnificently, the common spirituality of Islam. The central idea being always that of the presence, two lines emerge (cf. ḥalqal and ḥamrah): on the one hand, the presence of God makes it possible to speak to Him in confidence (muṣaddah); on the other the presence before God as on the Day of Judgment. This is the prayer of istikharah. But almost all the details of its ritual, the temporal limits of its performance, and the rules governing the ablusion or the combination of daily prayers as well as the performance of other ritual prayers, are based on the personal authority of the Prophet, in other words on the exemplary and inspired practice of the one of whom it is written, "In the Messenger of God, you surely have a fine model" (Kūr'ān, XXXIII, 21; cf. al-Bukhārī, Wūr, bāb 5; Muslim, Mustafirrīn, no. 36). Irrespective of the fact that the Prophet has reported, the rule of the prayer is expressed in the words "I have seen the Prophet do thus" (al-Bukhārī, Salāt, bāb 50; cf. Adānān, bāb 95-6 etc.). In point of fact, salāt is an imitation of Muhammad.

The Sūfis were to do nothing in this context other than to develop, sometimes magnificently, the common spirituality of Islam. The central idea being always that of the presence, two lines emerge (cf. ḥalqal and ḥamrah): on the one hand, the presence of God makes it possible to speak to Him in confidence (muṣaddah); on the other the presence before God as on the Day of Judgment. But almost all the details of its ritual, the temporal limits of its performance, and the rules governing the ablusion or the combination of daily prayers as well as the performance of other ritual prayers, are based on the personal authority of the Prophet, in other words on the exemplary and inspired practice of the one of whom it is written, "In the Messenger of God, you surely have a fine model" (Kūr'ān, XXXIII, 21; cf. al-Bukhārī, Wūr, bāb 5; Muslim, Mustafirrīn, no. 36). Irrespective of the fact that the Prophet has reported, the rule of the prayer is expressed in the words "I have seen the Prophet do thus" (al-Bukhārī, Salāt, bāb 50; cf. Adānān, bāb 95-6 etc.). In point of fact, salāt is an imitation of Muhammad.
In a context of warfare "in the way of God", the text reads in Kur'ān (Abu Dawud, no. 1240; al-Nasa'i, 143-4). The place is mentioned in Nadjd, one hand, the encounter at Dhat al-Rika during the expedition against the Ghatafan, in 4/626, is especially posed, historically, for the prayers of fear. The central question, which includes several gradations, is thus formulated: how many rak'as are there for the prayer of fear as for the prayer of maghrib? It being thus accepted that the imām performs the number of rak'as as the number of groups, the questions remain, how is the whole of the rite organized, and when does each of those praying perform the takbīr of desacralization? The successive rak'as will be designated by the following symbols: A = performed by group A only; B = performed by group B only; MA = performed by group A with Muhammad (or at a later stage with the imām); MB = performed by group B with Muhammad. Theoretically, a dozen or so solutions are possible. In fact, the canonical hadiths present three (appropriate references are given in each case):

MA, MB, B, A: tradition of Ibn 'Umar via his son Sālim (al-Bukhārī, bāb 1; Muslim, no. 305; al-Nasā‘ī, 139-40; al-Tirmīdī, no. 564), followed by certain Mālikī teachers (al-Kurtubī, v, 366-7; Ibn Mas‘ūd (ibid.).

MA, A, MB: a well-known tradition of Sahīh b. Abī Ḥāṣim via Sālih b. Khaqwāt, which comprises two versions:  

— Version transmitted by Yazid b. Rūmān: Muhammad performs the taslim with group B at the very end (Muslim, no. 310; al-Nasā‘ī, 139): this is the doctrine of al-Shāfi‘i and of Ibn Hānbal, according to al-Kurtubī, v, 366.

— Version transmitted by al-Kāsim b. Muhammad: Muhammad performs the taslim after the end of rak'a "MB" (Abū Dāwūd, no. 1239; cf. Muslim, no. 309, and Ibn Mālik, no. 1239); this is the doctrine of Mālik (according to al-Kurtubī) and of al-Malātāwī.

The community of traditionists and jurists acknowledge that these hadiths cannot be harmonized. They record various measures taken by Muhammad in different circumstances, where the requirements of security were not always of the same urgency. Two examples are recalled with particular clarity. On the one hand, the encounter at Dḥāt al-Rikāt, in Najḍ, during the expedition against the Qaṣāfān, in 4/626 (cf. Ibn Ḥiṣaṃ, l, 662; al-Tirmīdī, i, 1454-5; al-Mas‘ūdī, Murūq, § 1489). The place is mentioned in the tradition of Sahīh b. Abī Ḥāṣim, also for example in the tradition of Abū Ḥurayra (al-Nasā‘ī, 141). The enemy was then located in the direction opposite to the kibla; while performing the prayer, the Muslims then turned their backs towards the adversary, put-
ting themselves in the greatest danger. On the other hand, on an occasion when the Muslims, at Usfān, confronted an enemy band commanded by Khalid b. al-Walīd, the enemy was located in the direction of the house of a madman where this situation applied (traditions of Abū ʿAyyāb al-Zurākī, in Abū Dāwūd, no. 1236; al-Nasāʾī, 144-5).

The “prayer of fear” is specifically Muslim. However, the conflict between the duty, the desire or the need to pray on the one hand, and on the other the necessity of fighting, may be encountered in other religions. In the context, not of prayer admittedly, but of an act considered important, this situation applied during the restoration of the walls of the Holy City, ca. 445 C.E.: “From that day forward half the men under me were engaged in the actual building, while the other half stood by holding their spears, shields and bows, and wearing coats of mail; and officers supervised all the people of Judah who were engaged on the wall” (Neḥ. iv, 16, tr. NEB).

Thus far, consideration has been given to the obvious exceptions applied to the prayer rite in order to permit its observance “in assembly” in proximity to the enemy, on the very solid basis of Qurʾān, IV, 102. But also quoted, at the outset, was another passage: “If you fear [an attack, pray] on foot or on horseback” (II, 239). In commenting on it, Fakhr al-Dīn correctly observes: “The prayer of fear is of two kinds. The first, when one is in a position of combat, and this is what is envisaged by this verse. The second, when one is not (yet) in a position of combat, is that which is mentioned in the surat al-Nisāʾ (IV)” (al-Rāzī, vi, 154). Once battle has been engaged or is imminent, in the presence of the enemy, there is a duty, according to Abū Hanīfa, to delay the prayer until the situation is more favourable. But al-ʿSāḥīfī and Mālik firmly assert, on the contrary, that prayer should be observed at its proper time, during the battle itself, individually, even when mounted, with the understandable reduction to two rakʿās of the prayers which normally comprise four, and with two considerable relaxations of the ritual prescriptions. The first is, in case of necessity, abandonment of the kibla. The second is the replacement of bowings and prostrations by their īmā (cf. the tradition related by Ibn ʿUmar, in al-Bukhārī, bāb 2 and Muslim, no. 306, and that related by al-Awzāʾī, in al-Bukhārī, bāb 4). This means that it is sufficient to signify the corresponding act by its outline. The body or the head is slightly inclined to symbolise and signify ritual bowing; a rather deeper inclination represents prostration. These relaxations of the rite are not isolated; on the contrary they are related to similar dispositions concerning the prayer of the traveller and that of the invalid. Thus Islamic law contains precedents which could be used to find solutions to other problems.

ŠAL (a.), “crucifixion”. In Islamic doctrine and practice, it refers to a criminal punishment in which the body of the criminal, either living or dead, is affix-
SALDJUKIDS, a Turkish dynasty of medieval Islam which, at the peak of its power during the 5th-6th/11th-12th centuries, ruled over, either directly or through vassal princes, a wide area of Western Asia from Transoxania, Farghāna, the Semireчье and Khārazm in the east to Anatolia, Syria and the Hijāz in the west. From the core of what became the Great Saljuk empire, subordinate lines of the Saljuk family maintained themselves in regions like Kirmān (till towards the end of the 6th/12th century), Syria (till the opening years of the 6th/12th century) and Rûm or Anatolia (till the beginning of the 8th/14th century) (see below, section III).

I. The historical significance of the Saljukš

The appearance of the Saljukš undoubtedly marks a change in the course of the history of the central and eastern Islamic lands, but the nature and extent of this change, affecting a wide range of aspects of both material and religio-cultural life, are not easy to evaluate and have given rise to controversy (see below).

The Saljukš arrived on the scene of the Islamic world only a few decades after the practical and moral authority of the 'Abbāsid caliphs in Baghdad had reached its lowest ebb under the political and military tutelage of the Shī'ī Būyids [see BUWAYHIDS]. At the same time, many of the petty Arab principalities of Írāk, al-Djazira and northern Syria were also Shī'ī, but the most serious threat of all came from the constituting of the rival Ismā'īlī Shī'ī caliphate in North Africa, Egypt and southern Syria of the Fātimids, still in a militant, expansionist stage and with a capital, Cairo, which was beginning to outstrip Baghdad in material and intellectual splendour alike.

The installation of the Turkish Saljukš in Persia, Írāk, al-Djazira and northern Syria reversed this apparently unrelenting march of political Shī'ism, and it was to be another four centuries or so before Shī'ism would be able permanently to affect the religious complexion of large stretches of the northern tier of the Middle East, sc. Persia and eastern Anatolia (and, somewhat paradoxically, through the agency of further Turkish/Turkmen elements there, notably through the Şafawids and their Kızılbaşh followers). The Saljukš were Sunnī, and Hanafī in madhhab, who wished to replace existing powers in Persia, including the Ghaznavids and the generally Shī'ī Daylamī dynasties of northern and western Perßa (at the same time, by the removal of the last remaining of the ʿAbbāsid caliphate, a certain amount of pressure and constriction) without, however, the fruits of military and political victory, which they now wished to enjoy themselves. This explains why, although al-Kā'im welcomed Toghril Beg’s appearance at the outset, subsequent relations between the ʿAbbāsids and the Great Saljukš were not always smooth. The caliph soon found that they had little more freedom to manoeuvre than they had had under the Būyids. They only came into their own only during the middle years of the 6th/12th century, when they were able to show increased independence of mind and of freedom of action vis-à-vis the declining Saljukš.

This revival of the caliphate was to be transitory; both ʿAbbāsids and Saljukš were shortly to be swept away by new, dynamic forces from the East, notably the Khārazmshāhs and above all the Mongols. Yet through the co-existence for something like 130 years of the two dynasties the conditions were created for the development within Islam, even if dictated by practical necessity, of the concept of the caliph-imām as spiritual and moral leader and the sultan, in this case the Saljuk one, as secular, executive leader of a large proportion of the Muslims (see further, KHALIFA. (i) n; SULTAN; and below, section V. 1).

The irruption of the Saljukš into the Islamic lands was only the beginning of a prolonged movement of peoples from Inner Asia into the Middle East, one which was to have long-term social and economic as well as political and constitutional effects. Whilst many of the Turkmen elements percolating into northern Persia all through the Saljuk period passed on to Anatolia, others became part of the increasing nomadic and transhumant population of Persia and the central Arab lands, and this process became accelerated in the time of the succeeding invaders mentioned above, sc. the Khārazmshāhs and Mongols, through the movements of Turco-Mongol peoples. There resulted a transformation of land utilisation, social organisation and ethnic composition in the territories affected, associated with new systems of land tenure such as the šāhâd and the later sayyahrāl [q. v.], and with the pastoralisation of extensive areas of the northern tier of the Middle East, so that many of the Turk (or their Abbasid and Saldjuk successors) and the Mongol tribesmen became integral parts of the population there, previously mainly Persian and Arab, bringing with them their languages. The use of these land grants to support professional soldiers, and the availability of reservoirs of tribal manpower, first of all in the Saljuk period buttressed the authority of the sultans and their epigon, the atabegs [see ATABAK], but in the course of time it led to the political and military domination of Turkish dynasts or military leaders from Bengal to Algiers.

A further effect of the assumption of political leadership by the Great Saljukš lay in the consolidation of Sunni authority as the dominant ethos of rule in the central Islamic lands. Although barbaritans at the outset (and the first Saljuk sultans, at least in Persia and Írāk, remained substantially unlettered), these Turks knew how to make the best of the exist¬ing Persian and Arab administrative structures already in place, and the viziers and officials whom they employed, such as al-Kunduri, Nizām al-Mulk and al-Tughrâl [q. v.], shed as much lustre on their masters as had done the great viziers of the 4th/10th century on their Būyid employers. Culturally, the constituting of the Saljuk empire marked a further
step in the dethronement of Arabic from being the sole lingua franca of educated and polite society in the Middle East. Coming as they did through a Transoxania which was still substantially Iranian and into Persia proper, the Saldjûks—though no high-level Turkish cultural or literary heritage of their own—took over that of Persia, so that the Persian language became that of administration and culture in their lands of Persia and Anatolia. The Persian culture of the Rûm Saldjûks was particularly splendid, and it was only gradually that Turkish emerged there as a parallel language in the fields of government and adab [q.v.]; the Persian imprint on Ottoman civilisation was to remain a prominent until the 19th century.

The region of the Middle East where the coming of the Saldjûks was to have the most immediate and obvious impact, with enduring political, religious and cultural effects which are strongly visible today, was Anatolia. Here the Saldjûk sultanate of Rûm based on Konya and other Turkish principalities in northern and eastern Anatolia took over the greater part of the former Byzantine and Armenian territories of Asia Minor. It was in this region that the geographical designation Turkey/Turcia, etc., first appears specifically in Western European usage at the time of the Third Crusade of the Emperor Frederick Barbarossa (1187-92) (thus according to Cl. Cahen, "Pre-Ottoman Turkey. A general survey of the material and cultural history c. 1071-1330," London 1968, 144-5).

The details of the Saldjûks' part in the gradual Turkification of Asia Minor will be considered below under section III. 5; see also ANADOLU. i. i. But it should be noted that the consolidation of the Saldjûk sultanate of Rûm as the political, cultural, religious and geographical predecessor of the modern Turkish Republic, has been a salient point in the assessment of the general importance of the Saldjûks in Middle Eastern history by contemporary Turkish historians. Over some half-a-century, the role of the Saldjûks as the first Turkish, Islamic power to establish itself in the heartlands of the Islamic world (ignoring dynasties on the far peripheries like the Ghaznavids in Afghanistan and India and the Karâkhânids in Transoxania) has been the starting-point for much analysis and speculation by these Turkish scholars. In part, this has been a reaction against 19th century European views, those formed in the light of the Greek and Bulgarian liberation movements of the late 19th century onwards were unplanned plunder raids or part of a pre-planned grand strategy going back to the early decades of the century, a reasoning put forward by some Turkish nationalist historians (see further, below, section III. 1. 5).

These discussions have arisen out of the process, common enough in the recent history of central and eastern Europe as well as of Turkey, in which historical, linguistic and nationalist feelings are used as a formative impulsive in, or as a justification for, the consolidation of the existing state pattern (see H. Kohn, "The idea of nationalism, a study in its origins and background," New York 1961, 324-5, 329-31). As forming a fascinating case study, they have attracted the attention and the analyses of Western orientalists, notably of Martin Strohmeyer, Seldschuksische Geschichte und türkische Geschichtswissenschaft. Die Seldschuken im Umriss der modernen Türkischer Historiker, Berlin 1984, who surveys the whole topic in great detail, and of Gary Leiser in his useful A history of the Seljûks. Ibrahim Kafesoglu's interpretation and the resulting controversy. Translated, edited and with an introduction ..., Carbondale and Edwardsville, Ill. 1988, which makes available in an annotated English translation Kafesoglu's lengthy 14 article on the dynasty plus the views of other Turkish scholars involved in Saldjûk history, notably Osman Turan and Ahmet Atum 

II. Origins and early history

The Saldjûks were in origin a family group or clan of the Oghûz Turkish people. The Tokûz Oghûz or "nine tribes of the Oghûz" formed part of the early Göktürk empire of the early 8th century, and as such
are mentioned in that empire's royal annals, the Orkhon [q.v.] inscriptions. When that empire was already in the opening decades of the 4th/10th century; and with their appearance on the northern fringes of the Sāmānids amirate later in that century, they enter the full light of Islamic history [see Quz].

(Following one of the conventional Western spellings, Saldjuk is used here in the El. However, Barthold pointed out (Turkistan, 257 n. 1; Histoire des Turcs d'Asie centrale, Paris 1945, 80) that the former spelling (Seldjuk or Selcük) is the more frequent in the form of rules of vowel harmony in Turkish languages and that Mahmūd Kāshghārī in his Dīwān lughāt al-Turk (ed. Kilisli Rifâ’at Bey, ii, 397, tr. Atalay, i, 428) spells the name with kāf and presumably front vowels, i.e. Seldjuk or Saldjuk, with similar spellings in the Kitāb Dele Đekorot and other texts. P. Pelliot, in his Quelques noms turcs d'hommes et de peuples en -arl-ar, urlur,-irlir, in Oeuvres posthumes, Paris 1949, ii, 176-7 n. 2, took a similar line: "si je donnerais une transcription scientifique, je parlerais des Saldjuk". On the other hand, the spelling with kāf and implied back vowels is very old in the Arabic-script sources and in such Armenian writings, Saldjuk is used here in the

Within the Öghuz people, the leading tribe was that of the Kınık, from whom their princes sprang, according to Kāshghārī again (i, 56, tr. i, 55). The Saldjuk family or kin-group (it does not seem in origin to have been a much greater social group) came from the Kınık; later, when the Saldjaks had achieved power in Persia, attempts were made to give the family a glorious past, and Togrul Beg's official Abu l-ʿAlāʾ ibn Masʿūd [q.v.] likened them with the legendary Turkish king Afrasiyāb. On somewhat more certain historical ground, during the 4th/10th century, the Saldjuk leaders (called Saldjuk b. Dukak b. Temüür Yalğız "Iron bow") seems to have held the office of Sū Bashi or military commander, at the side of the Yabğhu. Because of dissensions, the Saldjaks fled with their herds from the Yabğhu to Dījand [q.v. in Suppl.] on the lower Syr Darya, and it was in this region that the Saldjaks divided, and that his family and his followers became Muslim; the hostility of these two branches of the Kınık was not resolved till 433/1041, when the Saldjaks, by then victorious in Khurasan and Khᵛārazm, drove out from the latter province the Yabğhu 'Allî's son and successor Shâh Malik (see Barthold, Turkestan, 177-8, 256-7; Bosworth, op. cit., 210-19).

Now on the borders of Khᵛārazm and Transoxania, the Saldjaks and other Öghuz bands hired out their military services, to the Sāmānids [q.v.], by this time in increasing difficulties, to the latter's eventual supplacers north of the Oxus, the Karakhanids [see İlek kiân] and to the local rulers in Khᵛārazm, moving into the steppe fringes of these regions and into the Kara Kum [q.v.] in what is now the Turkmenistan Republic. At the outset, the Saldjaks were led by the three sons of Saldjuk, Mușa, Mīkārî and Arslan Ḳarīb [see Arslan b. Saldjuk] (and possibly by a fourth one, Yūsuf) and, from the next generation, Togrul Beg Muḥammad and Qajarī Beg Dāwūd [q.v.].

Bands of Öghuz were scattered after a defeat by Sultan Muḥammad of Ghazna [q.v. in 428/1029 throughout Khurasan and northern Persia (the so-called "İraṭî Turkmens", but whether a raid as far as Adharbāyjān and Armenia under Qajarī Beg had taken place some ten years earlier is uncertain (though upheld as such by a nationalist-minded historian like R.L. Canfield, Turko-Turkmens moving into the steppe fringes of these regions and in 426/1035 the Saldjaks and their followers were asking Masʿūd b. Muḥammad [q.v.] for a grant of Naṣār, Farāwā and Sārānj [q.v.], and their pasture lands on the northern rim of Khurasan. Over the next few years, they infiltrated Khurasan and raided westwards into northern Persia, their lightly-armed and highly-mobile cavalrymen proving more than a match for the more heavily-armed but cumbersome Ghaznavid army, so that with the defeat of Masʿūd b. Dānānkān [q.v. in Suppl.] in 431/1040, the Saldjaks were soon able to overrun Khurasan and then to sweep into the remainder of Persia. We need not assume that the actual numbers of the Turkmen were very large, for the ways of life possible in the steppes meant that there were natural and environmental limitations on the numbers of the nomads. Yuri Bregel has implied, working from the 16,000 Öghuz mentioned by the Ghaznavid historian Bayhaḵī as present on the battle field of Dānānkān (Tārīḵ-i Masʿūdī, ed. Ghāni and Fayyād, Tehran 1324/1945, 619), that we should probably assume, in this instance, a ratio of one fighting man to four other followers, to the Samanids [q.v.], for the steppes which had been not altogether familiar to the Turkmen bands moving into the steppe fringes of these regions and in what is now the Turkmenistan Republic. At the outset, the Saldjaks were led by the three sons of Saldjuk, Mușa, Mīkārî and Arslan Ḳarīb [see Arslan b. Saldjuk] (and possibly by a fourth one, Yūsuf) and, from the next generation, Togrul Beg Muḥammad and Qajarī Beg Dāwūd [q.v.].

But various Kurdish and Daylamī dynasties of the Casspian regions and Dībāl were now attacked, although the process of overcoming the more powerful and long-established Būyids in Fars and İraṭ was slower. It was not until 447/1055 that Togrul was first able to enter Baghdaḏ and depose the Būyid prince al-Malik al-Raḥim Khūstraw Frīz [q.v.], and the last Būyids to rule in southern Persia lost their power only a few years later. What had helped the Saldjaks much to triumph, A.K.S. Lambton has suggested, were their obvious leadership qualities combined with a certain level of sophistication derived from a past in the steppes which had been not altogether unfamiliar with urban life in, for example, the towns on the lower Syr Darya; hence they were able to lead the Öghuz bands towards the towns and cities of the settled organism, the sultanate in Persia and İraṭ, than those Öghuz who stayed behind in the steppes between the Syr Darya and the lower Volga, what were later called the Kıpçak steppes (Aspects of Saldjuk-Ghuzz settlement in Persia, in D.S. Richards (ed.), Islamic civilisation 950-1150, Oxford 1973, 111).

Togrul had already adopted something of the style
of an independent ruler during his first, temporary occupation of Nishapur [as], the capital of Khurasan. Tughril was to exult in his role of deliverer of the caliph from the pressure of Turkish, troops, and from the Ghaznavids, whose division of authority, within the central and eastern provinces of the empire as appanages from Seljuk predecessors in the East, both from the Samanids, with their aristocratic Iranian background but a military dependence on professional, largely slave Turkish, troops, and from the Ghaznavids, ephemeral, of slave origin and dependent on a purely professional, salaried standing army; likewise, their opponents in the West, the Buyids and Fatimids, had come to depend upon professional, multi-ethnic armies. The sultans did not prove to be wholly exempt from the pressures arising out of the ethos of power in the Middle East at this time; they endeavoured to increase their own authority and to some extent to marginalise the Turkmen tribal elements, yet these last remained strong within the empire, and on occasions, powerful enough to aspire, through their favoured candidates for the supreme office of sultan, to a controlling influence in the state.

In any case, the sultans, especially those of the 5th/11th century, could not divest themselves completely of their steppe origins, and we have no reason to think that they wished completely to do so. Tughril, Caghri and Alp Arslan had grown up with the unassimilated, tribally-organised Oghuz tribe, and when they became Islamic territorial rulers they were nevertheless careful still to observe tribal law and custom when those did not clash with their new roles as sultans (but for an occasion when the new Islamic principles firmly overrode tribal custom, see below, section III.1). Sanjar, having within his Khurâsân dominions substantial groups of still unassimilated, tribally-organised Oghuz, was likewise conscious of his dual position. One later Turkish source states that, in accordance with ancient practice, he gave the right wing of his army to the Kayf and Bayat clans of the Oghuz and the left wing to the Bayindir and Buine (Muntazzab-i tavârik-i saljûkây, quoted by I.H. Uzuncarsili, Osmanlı devleti teşkilâtı ve mütadele, Istanbul 1941, 22-4). Several administrative documents from the period illustrate Sanjar's care to regulate his relations with his Ghuzz subjects; cf. Lambton, The administration of Sanjar's empire as illustrated in the 4Atabat al-kataba, in BSOAS, xxviii (1957), 382, and eadem, Aspects of Seljûq-Ghuzz settlement in Persia, 109-11. During Malik Shâh's reign, the great vizier of Alp Arslan and Malik Shâh, Nizâm al-Mulk, commented in his Şûşû-nâmâ, § 26, that the sultans had obligations towards their former backers, the Turkmen tribal leaders, or the central political authorities in the state apparatus amidst the trends towards administrative and military centralisation and professionalism (see also Lambton, in Camb. hist. of Iran, v, 246-7). The persistence of influences from the Oghuz tribal past is seen in the sultans' policy of allotting various provinces of the empire as appanages from Seljuk male relatives who had a claim, by virtue of seniority or experience, to some share in the material advantages of power. Tughril's brother Çaghri had from the time of the Dandankan victory been left with control of parts of Afghanistan that had been left with control of Afghanistan or experience, to some share in the material advantages of power. Tughril's brother Çaghri had from the time of the Dandankan victory been left with control of Afghanistan or experience, to some share in the material advantages of power. Tughril's brother Çaghri had from the time of the Dandankan victory been left with control of regions to which they had rights, or to which they had claims, that were not immediately under the authority of the sultan of the Seljuks. The persistence of influences from the Oghuz tribal past is seen in the sultans' policy of allotting various provinces of the empire as appanages from Seljuk male relatives who had a claim, by virtue of seniority or experience, to some share in the material advantages of power. Tughril's brother Çaghri had from the time of the Dandankan victory been left with control of Afghanistan or experience, to some share in the material advantages of power. Tughril's brother Çaghri had from the time of the Dandankan victory been left with control of regions to which they had rights, or to which they had claims, that were not immediately under the authority of the sultan of the Seljuks.
in fact, at least at the outset, and that this equality in status was recognised by symbols on their coins." Caghri died in 452/1060, and his son Alp Arslan, already active laterly in the affairs of the East, took over power there; after Toghril's death in 455/1063, he moved westwards and assumed supreme direction of the Saldjuk empire; all subsequent rulers of the Great Saldjuk line and the Saldjuk rulers in 'Irak and western Persia sprang from Alp Arslan. A further brother of Toghril's and Caghri's, Musa Bighu or Payghu [see PAYGHU], was left to bring under his control as much as possible of Transoxiana, at that time ruled by the Malikis of Nirmuz of the Nasrid line [see NIRMUZ]. Caghri's eldest son Kawurd [q.v.] was to expand southwards through Kuhiştan to Kirmān, and in fact founded the largely autonomous Saldjuk amirate in Kirmān which was to last for nearly a century and a half (see below, II, 4). Other members of the Saldjuk family also received grants: Ibrāhīm Inal or Yinal (who may have been a cousin and half-brother on his mother's side to Toghril but whose precise position within the family is not wholly clear, cf. V. Minorsky, Apallta/Inal, in RO, xvii [1951-2], 5-6) received Kuhiştan, and Kutlumüş (or Kutumış) b. Arslan Irsarł received Gurğan and Kūmis, whilst the sons of Caghri, Yākūt and Alp Arslan, accompanied Toghril westwards at this time.

Over the following years, there was much discontent within the Saldjuk family over the idea of father-son descent from Caghri to Alp Arslan and then to Malik Şah. Already during Toghril's lifetime, Ibrāhīm Inal and two of his nephews had rebelled unsuccessfully against Toghril (451/1060). When Alp Arslan claimed the throne of the whole Saldjuk dominions in 455/1063, his uncle Kutlumuş revolted at Sāva [q.v.] in the next year, voicing the old Turkish idea of the seniorate, the right of the eldest suitable male relative to have the supreme leadership; and when Malik Şah succeeded to power in 455/1072, his uncle Ākwūrd rebelled, but was executed at the prompting of Niẓām al-Mulk. As some compensation for the rejection of Kutlumuş's claim, Alp Arslan deflected the latter's son Sulaṃyān, together with other Turkmen elements who were imbued with the spirit of plunder and ghazw and who were probably impatient of the increasingly centralised direction of the state, westwards into Anatolia, where grew new variants of earlier ideas in the wake of the Saldjuk victory over the Byzantines in 463/1071 of Malāczgird [q.v.]. In this way, there eventually came into being the Saldjuk sultanate of Rūm based on Konya (see below, section III, 5).

**Bibliography:** A good survey of both primary and secondary sources (to ca. 1960) is to be found in the Bōbī. to Cl. Cahen's art. ghuzz; especially to be noted is Cahen's further article Le Malik-bâk-ehn et l'empire des seldjoucs, in Oriens, ii (1949), 31-65, which brings together information from the lost Malik-nāma (which was probably written for the young prince Alp Arslan shortly after the death of his father Caghri Beg in 452/1060); see also Bosworth, The Ghaznavids, 219) preserved in ʻAdr al-Dīn al-ʻAluṣaynī, Ibn al-Athīr, Barhebraeus and Mīrakhāzīd. Of additional and/or subsequent secondary sources, see R. Grousset, L'empire des seldjoucs (1977); L. Ofar, in Tarkonian Studies of Turkish and Turkmen Studies (Kafesoglu); W. Barthold, Four studies on the history of Central Asia. iii. A history of the Turkish people, Leiden 1962, 99-102; C.E. Bosworth, in Camb. hist. of Iran, v, 15-23, 42 ff.; M.A. Köymen, Büyûk Seljûkî mahaverləri tarihi. i. Kurbulu deori, Ankara 1979; P.B. Golden, in Camb. hist. of early In-
over the local maliks in the nearby province of Sistan. When the childless Toghril died, Çağrı's son Alp Arslan, who had been governing the province of Khurasan since his father's death, succeeded to the Saldjuk sultanate and another brother, Sulaymān, the great commanders of the Saldjuk army, and certainly Alp Arslan's vizier Nizām al-Mulk, seem to have felt that the interests of the Saldjuk family and of their followers—and perhaps even the interests of the Saldjuk dominions, if such a sophisticated and prescient attitude may be attributed to their new ruling class—would best be served by a strong, unified rule; hence Alp Arslan became supreme sultan of all the Saldjuk lands. His ten years' reign (455-65/1063-73) and the twenty years' one of his son and successor Malik Şah (465/1073-92) mark the zenith of the Great Saldjuk sultanate. Both rulers kept control over their far-flung territories by living lives of ceaseless journeying through the lands and campaigning on their borders.

The threat of economic dislocation to the agricultural prosperity of Persia was alleviated by the deflection of the Turkmens and their herds westwards, against the Christian princes of the Caucasus and Anatolia, and Alp Arslan attached such importance to these projects that he fought in Georgia and Armenia personally in 456/1064 and 460/1068. Hence during their reigns, Persia and 'Irāk enjoyed considerable agricultural and commercial prosperity.

Behind the two sultans stood the vizier Nizām al-Mulk, whose influence was so marked and all-pervasive in the state that a later historian like Ibn al-Athīr calls his thirty years of office al-dawla al-Nizāmīyya. Alp Arslan never himself visited Baghādād, but the Saldjuk presence was upheld there by a shihna or military governor, usually one of the Turkish commanders in the Saldjuk army of slave origin. During his reign, relations with the caliph were on the whole more cordial than they had been in Toghril's time and the sultan was strong enough to exclude the Abbāsids caliph from secular affairs in 'Irāk, but day-to-day relations between the two powers were conducted through their respective viziers. The marriage alliance with the caliphate in 480/1087, when al-Muktaḍī married one of Malik Şah's daughters, did not bring about the expected harmony, and shortly before he died Malik Şah set about making Baghādād his winter capital and may even have toyed with the idea of deposing the caliph in order to replace him with his infant grandson, the offspring of the marriage just mentioned.

Externally, Malik Şah inherited his father's concern about the northeastern territories, the regions of special Turkmen concentration, Adharbājān and Arrān, which he placed under his cousin Iṣmā'īl b. Yaḳūt b. Çağrı's governorship, and he himself led campaigns against Georgia. But the policy of expansion into Anatolia by the sons of Quṭlumush b. Arslan Iṣrā'īl, Sulaymān and Mansasr, who by 474/1081 were raiding as far as Iznik and the shores of the Sea of Marmara, was not an official one by the Saldjuk sultanate but the result of private enterprise by these cousins of the sultan, acting outside his own sphere of control, an enterprise which he did not necessarily regard with any great approval. Of more pressing importance to Malik Şah was the upholding of Saldjuk authority in al-Djazira and Syria against the local Arab amirates there, some of which were Şīfī and therefore possibly pro-Fātimid in sentiment. From the Saldjuk bases in 'Irāk and Syria (the latter province dominated after 471/1078 by Malik Şah's brother Tutuḡ) the sultan towards the end of his life secured the muḥta for the 'Abbāsids from the
venal Sharifs of Mecca and set about extending Saljūq power down the west coast of Arabia into the Ḥijāz and to Yemen and down the east coast into al- Ḥāsh. projects permanently cut short his death. He was the other end of the empire. Malik Shāh had invaded Transoxania in 466/1073-4 in retaliation for a Karakhanid attack on Ṭūkhārīstān prompted by Alp Arslan's death. He now in 482/1090 intervened militarily again in Transoxania in order to uphold Saljūq overlordship, at a point when the Karakhanid realm was internally troubled, and he even received the homage of the eastern Karakhanid ruler of Khurasan on his own terms. An…

Muhammad, undisputed sultan 498-511/1105-18, succeeded in re-asserting a good measure of control over the empire, with action against the Assassins in Dībāl and Daylam, and in 501/1108 he overthrew the Shīʿī Mazyadīd amīr of Hilla in central ʿIrāq, Ṣadāka b. Mansūr [see MAZYAD, BANI], thereby gaining the preponderance in ʿIrāq. Muhammad was, indeed, the last Great Saljūq sultan to rule the whole western parts of the empire with any degree of firmness, having left his brother Sandjar in Khūrāsān as his viceroy, with the title of malik. When Muhammad died, Sandjar was the senior member of the dynasty, and although it had been the practice over some eighty years for the supreme sultanate to be held by the Saljūqs who controlled western Persia and ʿIrāk, Sandjar’s seniority gave him a kind of de facto calling rendering the Turkish tribal custom. He had first been appointed as governor of Khūrāsān by Berk-yaruk, and Sandjar’s coins minted up to 493/1100 acknowledge Berk-yaruk as his suzerain; but after that date, he had transferred his allegiance to Muhammad (see N.M. Lowick, Seljuq coins, in NC, 7th ser., vol. x [1970], 244-6). He now assumed the role of supreme sultan, a move which the weaker, quarrelling sons of Muhammad were unable to oppose, so that Sandjar’s name was generally placed on their coins before their own; thus a date minted early in his reign by Mahmūd (II) b. Muhammad, sultan in western Persia and ʿIrāk (511-25/1118-31), attribute to Sandjar the title al-Sulṭān al-Muʿazzam but simply give Mahmūd’s own name and patronymic.

Aḥmad Sandjar thus became ruler over northern Persia and Khūrāsān, whilst his nephew Mahmūd tried to maintain his authority in western Persia and ʿIrāk over his unruly brothers (see below, 2). Sandjar brought Mahmūd, who was reluctant to acknowledge his uncle’s supreme authority, to heel by defeating him in battle near Sāwa [q.v.] in 513/1119. Henceforth, Mahmūd, and then his successors Toghrill (II) (526-9/1132-4) and Masʿūd (529-47/1134-52), remained clearly his vassals, with the title of sultans but in reality with the status of maliks; only latterly, during the period of Sandjar’s preoccupation with affairs in Transoxania and Khuruṣān, did Masʿūd attain somewhat more freedom of action. Even so, the passage of time and the unprecedented length of Sandjar’s rule in the east, first as malik and then as supreme sultan, in general strengthened Sandjar’s moral authority within the dynasty.

Sandjar continued the policy of Berk-yaruk and Muhammad by launching attacks on the Ismāʿīlīs of both Daylam and Kuhistān after the death in 518/1124 of Ḥasan-i Ṣabbāb, but without seriously affecting these sectarians’ power in those localities. He also endeavoured, both as malik and then as sultan, to retain the Saljūq overlordship established beyond the northeastern borders of the Saljūq empire by his father Malik Shāh, who had made the Karakhanids of Transoxania his tributaries. He placed Arslan Khān Muhammad on the throne of Samarqand in 495/1092 and confirmed the religious leadership in Buhkharā of the šāhs of the Al-ī Burhān [see SADR AL-SUDUR], but at the end of Arslan Khān’s long reign, Sandjar once more appeared at Samarkand and placed a fresh nominee on the Karakhanid throne. In neighbouring Khürāzim, the Turkish Shāhs of the line of Anūṣh- tīqīn Qaraḫānī [see KHURAZM-SHĀH] ruled also as...
Sandjar's vassals; Khūt al-Dīn Muhammad b. Anūṣṭūgin always remained respectful towards the Saldjuk sultan, but his son Atsiz had his own ambitions and in 533/1138 rebelled openly against Sandjar's overlordship. The latter led expeditions against him on this and on subsequent occasions, but events were soon to prove that Saldjūk resources were overstretched in attempting to keep up any degree of military control beyond the Oxus. More lasting, however, was the assertion of Saldjūk suzerainty over, and the communication of a strong Saldjūk cultural influence within, the Ghaznavid sultanate in Afghanistan and northeastern India, when the sultan in 510/1117 placed his protégé Bahram Shāh on the throne of Ghazna.

The catalyst for the ending of Saldjūk influence beyond the Oxus was the appearance within the Islamic lands there of a new power, the pagan Kara Khitay [q.v.] from northern China, who moved against Transoxania, provoking Sandjar to intervene as suzerain of the threatened Karakhānids there. But in Khurasan b. Malik Shāh, but then the Kara Khitay (who soon showed that they had no ambitions south of the Oxus), were arising in the east, e.g. the Khārazm Shāhs and the Ghurids [q.v.] from central Afghanistan. But it was stresses and discontents within the Karakhānids which, despite Sandjar's attempts to stay attuned to Turkmen feeling there (see above, section II), brought his rule there to a dismal and painful end. Following the first attacks; but when it passed to his son Mahmud, they split up that unity and destroyed its cohesion. They claimed a share with him in the power, and left him only a bare subsistence*. He likewise asserts that, by the time of his death in 525/1131, Mahmud had got through the treasury of eighteen million dinars plus estates, jewels, clothing, etc., left by his father (al-Bundārī, 134-5, 155-6).

The general tendency during these years of civil strife between the sons of Muhammad was for the sultan to exercise authority in Irāk and southern Dībāl, but to have little beyond these regions; thus during Mahmud's reign (511-25/1118-31), Toghūrī held northern Dībāl and the Caspian provinces and Mahmud was never able to dislodge him, whilst Masʿūd held Ardharbāyjān, Mawsil and al-Djazira. Even within Irāk, Mahmūd's position was challenged by local powers there like the Mazyadids and ambitious commandors like Imād al-Dīn Zangī (see on this last, H.A.R. Gibb, Zengi and the fall of Edessa, in A history of the Crusades, i, 449-62), so that the Saldjūk hold on Irāk tended to be confined to the central part only. Anūṣṭūgin, again, noted how Sandjar had appropriated all the northern Persian provinces as iṣā's, most of Fārs and Khuzistān was held by Mahmūd's rival Saldjūk Shāh, and how the Mazyadid Dābūs b. Šadaḵ held much of southern and central Irāk, so that the sultan was left with only an exiguous amount of territory from which he could grant iṣā's to his supporters, and had to resort to arbitrary confiscations (al-Bundārī, 134-5). The preoccupations of the Saldjūks within their own territories allowed the Christian Georgians, under the great David “the Restorer”, to recover ground in eastern Transcaucasia [see al-Kūrjī]. A longer-term trend was that Saldjūk dissensions gave the ʿAbbāsids an opportunity to increase their military effectiveness and secular power during the course of the 6th/12th century, under the forceful rule of such figures as al-Mustaṣfārid (512-29/1118-35 [q.v.]), al-Muqtāfī (530-55/1136-63) and, above all, al-Muṣṭaṣfārī (575-622/1180-1225 [q.v.]). Their lengthy periods of rule contrasted with the frequent changes in the holders of power within the sultanate, and these caliphs were moreover served by capable viziers such as ʿAwn al-Dīn Ibn Hubayra and his son ʿIzz al-Dīn [see Ibn Hubayra] dedicated to raising the effectiveness of the

* The general tendency during these years of civil strife between the sons of Muhammad was for the sultan to exercise authority in Irāk and southern Dībāl, but to have little beyond these regions; thus during Mahmud’s reign (511-25/1118-31), Toghūrī held northern Dībāl and the Caspian provinces and Mahmud was never able to dislodge him, whilst Masʿūd held Ardharbāyjān, Mawsil and al-Djazira. The preoccupations of the Saldjūks within their own territories allowed the Christian Georgians, under the great David “the Restorer”, to recover ground in eastern Transcaucasia [see al-Kūrjī]. A longer-term trend was that Saldjūk dissensions gave the ʿAbbāsids an opportunity to increase their military effectiveness and secular power during the course of the 6th/12th century, under the forceful rule of such figures as al-Mustaṣfārid (512-29/1118-35 [q.v.]), al-Muqtāfī (530-55/1136-63) and, above all, al-Muṣṭaṣfārī (575-622/1180-1225 [q.v.]). Their lengthy periods of rule contrasted with the frequent changes in the holders of power within the sultanate, and these caliphs were moreover served by capable viziers such as ʿAwn al-Dīn Ibn Hubayra and his son ʿIzz al-Dīn [see Ibn Hubayra] dedicated to raising the effectiveness of the
caliphate in the politics of the age. Accordingly, it became more and more difficult for the Saldjûks to maintain what they had come to regard as their rights in Baghûsh by increasing the payment of tribute to them by the caliphs and the maintenance of a ṣibâna within the city. The high points of Saldjûk authority at this time were reached in 529/1135, when Mas'ûd b. Muhammad (529-47/1134-52) defeated the caliph al-Mustansîr outside Hamadân, soon after which the caliph was mysteriously killed in the sultan's camp; and in 530/1136, when Mas'ûd deposed al-Mustansîr's successor al-Râshid (529-30/1135-6) [q.v.]—who had assembled, but in the end unsuccessfully, a grand coalition of discontented Saldjûk princes and Turkish commanders against the sultan—and installed in his stead his uncle al-Muktafî. However, the new caliph soon began vigorously to assert his secular rights, to build up his army by purchasing Armenian and Greek slave soldiers and then to defy the sultan. When Mas'ûd died, al-Muktafî expelled from Baghdad the Saldjûk sultan's son al-Mustadîd b. Muhammad and appropriated the sultan's palace and lands; no representative of the Saldjûks were allowed there; no representative of the Saldjûks were allowed to allow Zangi after 521/1127 to achieve virtual independence in Persia and the Fars region. Trends which would once again reduce caliphal power.

The Turkish commanders were at variance over the choice of a successor, for the prestige of the Saldjûk caliphate had now accentuated. The northwest of Persia remained under the atabeg line of Eldiguz or Ildeniz [q.v.], which would once again reduce caliphal power. Trends which would once again reduce caliphal power.

Al-Muktafî, they brought out from his captivity in the citadel of Takrît Arslân b. Toghrîl (II), the future penultimate sultan of the dynasty, in order to insubordinate the army and the Turkmen princes [q.v.]...

The caliph al-Muktafî was now the chief power in 'Irâk, and after 575/1180, Al-Nâşir b. al-Mustadîd made himself a central figure in the politics and diplomacy of the central Islamic lands; but by now, the main threat to the 'Abbâsids came not from the Saldjûk sultans but from the vigorous and expanding Khârazm Shâhs.

Sultan Mas'ûd left no direct heir so that, as after his father Muhammad's death, there ensued a series of succession disputes amongst the Saldjûk princes with claims to the throne, including his brother Sulayman al-Shâh and various of his nephews, none of whom, with the exception of Muhammad (II) b. Mahmûd (548-54/1153-9), was of more than mediocre ability. They were all largely dependent on the support of the great Turkish commanders, who used Saldjûk claimants as shields for their own personal ambitions and who were often allied by marriage with the Saldjûk family; thus Arslân Shâh b. Toghrîl (II) (556-71/1161-76) was the stepson of the atabeg Eldigûz, since the latter had married Toghrîl's widow. The Saldjûk family still had a certain amount of baraka and prestige in its name, especially in the eyes of their Turkmen tribal followers. The Oghuz of Khurâsân treated the captive Sandjar in a contemptuous and humiliating fashion, but did not apparently ill-treat him, and when in 549/1154-5 the amîr of the Saldjûk army in 'Irâk were trying to rally their forces against the caliph al-Muktafî, they brought out from his captivity in the citadel of Takrît Arslân Shâh b. Toghrîl (II), the future penultimate sultan of the dynasty, in order to insubordinate the army and the Turkmen princes [q.v.].

During his six years or so as sultan, Muhammad (II) tried energetically to restore the Saldjûk position in 'Irâk, defeating his uncle and rival Sulaymân Shâh and besieging Baghûsh (551-2/1157) before illness and death overtook him with his task incomplished. The Turkish commanders were at variance over the choice of a successor; al-Muktafî had an amir who was the last of the Saldjûk princes with claims to the throne, including his stepson and alter-ego, the atabeg of Persia Eldiguz or Ildeniz [q.v.], who was a chief supporter of the caliph. The caliph al-Muktafî had started to move in the west, especially in the eyes of their Turkmen tribal followers. The Oghuz of Khurâsân treated the captive Sandjar in a contemptuous and humiliating fashion, but did not apparently ill-treat him, and when in 549/1154-5 the amîr of the Saldjûk army in 'Irâk was trying to rally their forces against the caliph al-Muktafî, they brought out from his captivity in the citadel of Takrît Arslân Shâh b. Toghrîl (II), the future penultimate sultan of the dynasty, in order to insubordinate the army and the Turkmen princes [q.v.].

With Mas'ûd's death in 547/1152, the Saldjûk sultanate of the west entered its final phase of decline; Ibn al-Aghîr writes that 'with him, the fortunes of the Saldjûk family died; after him there was no banner to depend upon or to rally round'. This juncture was also marked by two events, one the one of the senior member of the family, Sandjr, as coming embroiled with the Ghuzz in Khurâsân, hence could give no help to his kinsmen in the west. Trends discernible during the previous three decades were now accentuated. The northwest of Persia remained dominated by the Eldigûzids and Ahmadîlis; Armenia and Dîyâr Bâkî were disputed by the atabeg line of the Shâh Armanids of Akillâh and the Ayyûbids of Iberia [q.v.]; the northern Sûrîs and the territory of the Zangids; Turkmen governors controlled Khûzîstân; and the Saldjûk sultans of Persia, the child Toghrîl (III) b. Arslân (571-90/1176-94). Toghrîl was praised by contemporaries both for his learning and for his martial abilities. On reaching his maturity, Toghrîl attempted, with aid from the Turkish commander in Rayy,
Kutlugh Inanê Muhammad, to break away from Kizil Arslan Uthman's grip, but failed and was seized and jailed by the latter, who then claimed the sultanate for himself before he died mysteriously a year later. Toghril was released after two years' incarceration, gathered support in northern Persia and made himself master of Dibâb; but he was unable to prevail against the Khârazmian Shaikh Tekiân, and in a battle outside Rây in 590/1194 was defeated and killed. Since the line of Kâwûrd's descendants in Kirman had only a few years before (see below, 3), this marked the end of the Saljuqm dynasty in Persia and ‘Iraq. Sources note that this dynasty began with a Toghril and ended with a Toghril. The dynasty's demise does not seem to have stirred up any feelings of regret or nostalgia; for almost four decades the sultans had been only one element, and that an increasingly enfeebled one, in the complex pattern of Persian politics on the eve of the twin catastrophes of Khârazmian and then Mongol invasion.

Bibliography: The bibliography for a century and a half of the history of much of the central and eastern lands of Islam is immense. Detailed reference may be made to the bibls. to the articles on individual sultans, caliphs and atabegs. There are relevant sections in J. Sauvaget, Introdu, à l'histoire de l'Orient musulman, 140 ff., in Cl. Cahen's English reform and enlargement, Jean Sauvaget's Introduction to the history of the Muslim East, Berkeley and Los Angeles 1965, 151 ff., and Cahen's Introdu, à l'histoire du monde musulman médiéval VII-XV siècle, Paris 1982, 149-50. Kosuke Shimizu, Bibliography on Seljuk studies, Tokyo 1979, is based on a previous Turkish bib. The Index islamicus of J.D. Pearson et alii has items on Seljuk history in its sections on Turkey and Persia. Finally, there are extensive bibls. by Bosworth, in Camb. hist. of Iran, v, 683-9, and by Leiser, in A History of the Seljuqs, 190-6; see also the bibl. given above in section 1. Hence only some of the main sources specifically bearing on Seljuk history will be noted here summarily.

3. The Seljûqs of Kirmân. After his victory in Khurâsân, Toghrîl Beg sent an expedition in 433/1041 to conquer the province of Kirmân, in southeastern Persia, from its Buyid ruler, ‘Imad al-Dîn Abû Kâlidjîr Marzûbân (q.v.). This was repulsed, but Seljuk rule was imposed on Kirmân, and on the mountain peoples of the southern part of the province, the Kufs (q.v.) and Balûc [see BALÛÇTAN. A.], by Kâwûrd al-Kâwûrd, who was able to prevail against the Khârazmian Shaikh Tekiân and the slave and other professional soldiers in his forces were granted ikâs’s from the agricultural lands there. The detailed history of the Seljuk amirate which now came into being can be followed in Kirmân. History, and only a few general points will be made here. The compact geographical boundaries of the amirate seem to have allowed a greater degree of administrative centralisation within it as compared with the lands of the wider Seljuk sultanate in Persia and ‘Iraq. Muhammad Shah b. Malik Shah of Kirmân (537-51/1142-80) succeeded his father Muhammad Shah b. Ibrâhim, 29-30, a highly-developed espionage and intelligence system, both within Kirmân and outside, extending as far as Khurâsân and Isfahân. On the whole, and until the chaos of the last decade or so of the amirate’s existence, Kirmân enjoyed a period of peace and prosperity. This was helped by the province’s position on the trade routes which ran down from Kirmân and Central Asia to the Gulf shores, carrying commerce which the amirs themselves, since they drew a substantial income from transit taxes on merchants and from customs dues levied at ports like Tiz in Makrân (see below, section V, 1), encouraged considerably. Thus caravanserais were built and the roads protected against the brigandage of the Kufs and other lawless elements. During the long rule of Arslan Shah (I) b. Kirmân Shah (495-537/1101-42) and during that of Bahram Shah b. Toghrîl Shah (563-70/1170-51), foreign merchants, including Rûmîs and Indians, established trading colonies in the towns of Kirmân or Bardasîr (the amirs’ summer capital) and in Djîrûf (q.v.) (the winter capital) (Afdal al-Dîn Kirmânî, Idât al-sulâyîn, Tehran 1311/1932-3, 70-1; Muhammad b. Ibrâhim, 25-6, 49). It was Arslan Shah, one of the outstanding rulers of his family, who, according to Ibn al-Djawzî, ...
in 533/1138-9 sought the mediation of Sultan Mas'ud b. Muhammad in seeking the hand of the 'Abbāsid caliph al-Mustarshīd's widow; he had already contributed to the service of Bahram the Saldjuk by marrying one of Muhammad b. Malik Shah's daughters. Indeed, relations with the supreme sultans in western Persia and 'Irāk, and with Sanjar in the east, remained close; at the outset, Kawurd's coins had acknowledged the authority of the ruler of the east, his father Čaghri Beg, and in general, the Kirman amirs continued to express their subordination on their coins (see Lowick, Seljuq coins, 250-1, and Buljubasova, 'The relationship between Tughrīl Beg and Čaghri Beg', 290-1).

For most of the amirate's existence, its rulers were content to enjoy their own province, but on certain occasions the amirs endeavoured to extend their military power or their diplomatic activities beyond the boundaries of Kirman. It was Kawurd's army which in 454/1062 entered the neighbouring province of Fārs, on behalf of the Saldjuk amir, to crush the defected Kurdish chief Fadluya and his vassals; Fārs now became part of Toghrīl Beg's amirate, although Saldjuk control was not finally made firm until Fadluya was captured and killed in 461/1069. Kawurt's own claim to the Great Saldjuk sultanate, as senior member of the family after Alp Arslan's death, and his resultant bid for power, have been mentioned above in 1. Arslan Shah in 508/1114-15 invaded Fārs, then under the Turkish commander, on behalf of Muhammad b. Malik Shah, and also intervened at one point in a succession dispute at Yazd involving the vassal governor of the Saldjuk there, the Daylamī 'Alā' al-Dawla Gāshāp [see R. KAYVID].

Many of Kirman's historic contacts were with the lands further east; in previous times Kirmān had formed part of such military empires as those of the Saffarids (late 3rd/9th and early 4th/10th centuries) and of the Ghaznawids (early 5th/11th century). In the succession dispute of 510-12/1117-18 between the Ghaznawids Arslan Shah and his brother Bahram Shah, the latter appealed to Arslan Shah of Kirman for help; but Arslan Shah preferred to leave a situation which came more within Sanjar's sphere of interest (the dispute was in fact resolved by Sandjar's mediation). At some date unspecified by Muhammad b. Ibrahim, Kawurd sent his son Amīrān Shah with an army into Sīstān, although at this time Sīstān was attached, as a vassal state, to the Great Saldjuk's controlling Khurāsān, to Toghrīl's brother Mūṣa Bīghu or Payghū and shortly afterwards to Čaghri's son Yākūt, and then in the next century, to Sanjar.

The events of the last years of the Saldjuk amirate in Kirmān were in many ways a replica of what had already happened in the Saldjuk lands of western Persia and Khurāsān. In a period of short-reigning amirs, especially after 565/1170, the Saldjuk princes in Kirmān fell under the control of slave commander atabegs, such as Mū'ayyid-al-Dīn Rayhān, the former atabeg of Toghrīl Shah b. Muhammad (I) Shah b. Arslan Shah. The warfare which raged between the contenders for power devastated the countryside of Kirmān and imposed new financial burdens on its people. From 573/1178 onwards, Kirmān was afflicted by fresh bands of Qohruz tribemen deflected southwards from Khurāsān by the fighting there between the Khwārezm Shahs and the Ghūrids, and these bands brought further ruin to agriculture and trade, bringing about severe famine in towns like Bardasān. Finally, in 582/1186, the Oghuz leader Malik Dinār took over the province from the last Saldjuk amīr, Muhammad (II) Shah b. Bahram Shah, who fled and ultimately entered the service of the Ghurids. This event came eight years before the fall of the Saldjuk sultanate in Western Persia; only in Anatolia did the Saldjūks now remain as rulers.

Bibliography: In addition to the general primary sources for Saldjuk history listed in 2. above (Rāwandī, Bundārī, Husaynī, Ibn al-Athīr, etc.), Kirmān is especially well served for this period by its quite abundant local histories, in particular, by Abīa' al-Dīn Kirmanī's Ṣulṭānāt al-verbosity al-amīn fi waqāyī Kirman, but also by what is in effect a special history of the Saldjūks of Kirmān, Muhammad b. Ibrahimīm's Taḥārī Handbook yān-yān Kirman. For full details, see the Bibli. to Kirmān.

4. The Saldjūks of Syria (471-511/1078-1117)

The Turkmen bands which had come westwards with the Saldjuk brothers went mainly towards Armenia, the Caucasus and Anatolia, but others of them infiltrated the regions of Diyar Bakr and the upper part of al-Djazīrah. Already in the later part of Toghrīl's reign, Turkmen had reached Malāya. In the 1060s they were harassing the countryside around Edessa (Ūrfā or al-Rūḥā [g.v.]), and Alp Arslan, during the course of his campaign against the Byzantines, attacked the city in spring 453/1071, and it may have accepted the nominal suzerainty of the Saldjuk sultan; over the next three decades, until the arrival of the Frankish Crusaders, Edessa was to be attacked by various Turkmen commanders, including the Saldjuk prince Tutush and the Artuqīd Sukman of Ḥisān Kayfā and Mārdīn (see J.B. Segal, Edessa 'The Blessed City', Oxford 1970, 220 ff.).

The Saldjuk sultans came to attack importance to Syria as the westwards extension of the position which they had established for themselves since Toghrīl's time in Mawsīl and the southern parts of al-Djazīra, but most of all because it was a march province between themselves, the champions of Sunni orthodoxy as they saw themselves, and their Shi'a opponents and rivals, the Fātimids. Syria was a region of great fragmentation, politically, ethnically and confessionally, with a strong local strain of Shi'ism amongst the Muslim Arab tribes and principalities there; the First Crusade was shortly afterwards to take advantage of these political, tribal and sectarian divisions.

In the second half of the 5th/11th century, the Fātimids' hold on southern Syria and Palestine was progressively reduced, until by the time of appearance of the Franks, they held only some fortresses on the Palestinian and Lebanese coasts. This rolling-back of Fātimid control from inland Syria and Palestine was in part the work of various Turkmen commanders dispatched there by the Great Saldjûks, and in part that of Turkmen begms and their flocks, allowed to infiltrate Syria and act on their own initiative. This last was the case with the tribal beg Afsīz b. Uvāk [g.v.], who first, in 463/1071, entered southern Syria and Palestine at the invitation of the Fātimid caliph al-Mustansir [g.v.], who hoped to use him as a counter-force against the rebellious Bedouin Arab tribesmen
of the region. Atsiz tried to set up a Turkmen prin-
cipality of his own there but, having fallen out with
the Fatimids, whose army besieged him in Damascus,
he had to appeal for aid to the Saldjuk sultan Malik
Shah. The latter in fact decided to allot central and
southern Syria and Palestine as an appanage for his
brother Tutush [q.v.]; once Tutush arrived in Syria,
he lifted the siege of Damascus but executed his poten-
tial rival Atsiz (471/1078).

Tutush then began an amirate in Syria which lasted
for seventeen years (470-88/1078-95). Northern
Syria, with its strategically-placed centre of Aleppo,
had been controlled by the Arab Mirdasids [see MIR-
das, BANU] laterly in full decline, and replaced after
472/1080 by the Saldjuk's vassal, the 'Ukaylid
Muslim b. Kuraysh [see 'UKAYLIDS]. Disputes over
possession of Aleppo between Tutush and the Saldjuk
leader of raids into Rûm, Sulaymân b. Kutulmush
(see below, 5), which ended in Sulaymân's defeat and
death in battle in 478/1086, led to Malik Shah's com-
ing west from Iqshelfân personally with a large army in
defeat of the First Crusade, which injected a new
element into the already complex political and dynastic
rivalries in Syria.

Dukâk (488-97/1095-1104) remained for all of his
reign very much in the shadow of Tughtigin, who was
not only his atabeg but also his stepfather, since
Tutush had given Dukâk's mother in marriage to
Tughtigin. From the outset, Ridwan (488-507/1095-
1113) was at odds with his brother and with
Tughtigin, and in 489/1096 or the following year, the
two sides clashed in battle near Kinnasrin [q.v.]. Rid-
wan having secured troop reinforcements from the
Fatimids. Dukâk and Yaghî Siyân were decisively
defeated, and had to agree to placing Ridwan's name in
the khutbas of Damascus and Antioch before their
own. When the Crusaders besieged Yaghî Siyân in
Antioch, Dukâk and Tughtigin sent soldiers to rein-
force an army sent by the supreme sultan Berk-yaaruk,
but failed to save the city (henceforth the centre of the
Local Principality of Antioch), and Ridwan himself
was then against the Crusaders by the irreconcilable
division between Ridwan and Tughtigin had allowed
the Franks to continue their march southwards to
Jerusalem and beyond. Damascus, a firmly Sunnî city
and the bastion of orthodoxy in Syria, was, under the
skilful rule of Tughtigin, able to withstand pressure
from the Crusaders, and Tughtigin went on to found
his own short-lived Turkish dynasty there, the Bôrîds
[see BÔRÎDS]; before his death in 522/1126, he had in
509/1116 become the leader of all Syria under the Saldjuk
sultan's control, with Tutush's authority confined to
Syrain. He occupied Aleppo and central and
northern Syria, and the Turkmen beg Artuk in Jerusalem. Al-Djazira and Syria were thus firmly brought within the supreme
sultan's control, with Tutush's authority confined to
central and southern Syria. All these local governors and Tutush were ordered to conduct operations
against the coastal areas of the Levant, where petty
rulers like Ibn 'Ammar of Tripoli [see 'AMMAR, BANU]
still enjoyed virtually undisturbed power.

The death of Malik Shah in 485/1092 enabled Tutush to put forward his claim, as the most ex-
perienced of the surviving sons of Alp Arslan, to the
supreme Saldjuk sultanate. He proclaimed himself
sultan at Damascus, managed to kill Aceonkur and
Bozan, and extended his military power over all Syria
and Al-Djazira, preparing to march eastwards into
Persia against Malik Shah's successor Ber-yaaruk (see
above, 1). But a majority of the great Turkish
commanders—doubtless hoping to achieve a greater
role in the state under the youthful Berk-yaaruk than
under the mature Tutush—eventually rallied to Berk-
yaaruk, and Tutush was defeated and killed near Rayy
(Safar 488/February 1095).

Ridwan was however able to exert his authority in the lands west of Irak, and Tutush's two sons Ridwan and Dukâk, encouraged by the latter's
atabeg Tughtigin [q.v.], a former slave commander of
Tughtigin. From the outset, Ridwan and Tutush were ordered to conduct operations
against the coastal areas of the Levant, where petty
rulers like Ibn 'Ammar of Tripoli [see 'AMMAR, BANU]
still enjoyed virtually undisturbed power.

The death of Malik Shah in 485/1092 enabled Tutush to put forward his claim, as the most ex-
perienced of the surviving sons of Alp Arslan, to the

5. The Seljukus of Rum (ca. 483-707/ca. 1081-1307)

It is soon after Alp Arslan's victory at Malazgird (see above, section III. 1) that we hear of the activities in Anatolia of the four sons of Kutalmish: the Kutlumush b. Arslan Isrâ'il, and the descendants of one of these sons, Sulaymân, were to found in central Anatolia the Seljuk sultanate of Rum based on Iconium or Konya [q.v.]. As noted above (loc. cit.), and see the views of some modern Turkish nationalist historians, these activities seem to have been purely symbolic acts of individual enterprise, although later official historiography, e.g., by H. H. Brentjes and C. A. C. Schaller, of the Seljuk sultanate of Rum in the 7th/13th century insisted that the Great Seljuk sultan Malik Shâh had, on his accession, personally bestowed the land of Rum on his cousins, the sons of Kutalmînsh. In fact, these last seem earlier to have been present in Anatolia during the time of the Seljuk sultans of Rum. In fact, these last seem earlier to have been under official Seljuk supervision, and only managed to escape to the safety of the fluid, governmentally uncontrollable Anatolian frontiers after Alp Arslan's death. Official disapproval continued under Malik Shâh, who had Mansûr b. Kutalmînsh killed, and although Sulaymân escaped, he was later killed in battle, contending with his kinsman Tutish on control of Aleppo in 479/1086.

Meanwhile, Turkmen bands had been operating within Asia Minor, raiding as far as the shores of the Sea of Marmara and the Aegean, so that Sulaymân had reached Nicaea or Iznik in the far north-west of the land, and it is from this time that one may roughly date the beginnings of a Seljuk principality in Anatolia. After Malik Shâh's death in 485/1092, Sulaymân's son Kilîç Arslan I (485-500/1092-1107) managed to escape from captivity and was raised to the leadership of the Seljuk principality in Anatolia, only moving his capital to Konya after the Frankish armies of the First Crusade recaptured Nicaea in 1097. Malik Shâh had not had any definite plan for the overrunning of Anatolia. He did, however, hold himself as head of all the Turks, and wished to control the Turkmen, the most anarchyically-inclined of his people, and in pursuit of this had been prepared to make an agreement with the Byzantine Emperor Alexis Comnenus, whose empire was being threatened by the Turkmen's depredations.

The infant Seljuk principality in Konya was only one of several Turkmen beylikûs which now took shape in central and eastern Anatolia, such as the Saltukids [see Saltukids], the Erzerum, the Mengiçekids [see MengiçekÊ], in Erzincan and other towns of the east, the Shâh Armanids [q.v.] of Sôkmen's line in Akhîla to the west of Lake Van and the Artukids [q.v.] in Diyarbakr. The most serious rival, because geographically closest to the Saltukids, was the Dânîîshêmdîns [q.v.] of north-central Anatolia, who controlled the northerly route across the land via Sivas, Kayseri and Ankara, and who after 529/1134-5 enjoyed the title of Malik bestowed on them by the 'Abbasid caliph for their zeal in ghazzâm against the Byzantines.

When Kilîç Arslan I was killed in battle, there was a temporary division of the Saltukids lands. The appearance of the First Crusaders and a re-assertion of Byzantine power, plus the policy of containment of the Turkmen applied on their western frontier by the Great Seljuk sultans in Persia and 'Irâk, had meant that the various Turkish groups in Anatolia were confined to the interior of Asia Minor. There was often occasional cooperation between the Seljuk sultanate of Rûm and the Genoese, and the Dânîîshîmdîns against such foes as the Byzantines and the Armenians of Cilicia and Little Armenia, but after the death of the Dânîîshêmdîn Muhammad b. Gumîchqûn in 536/1142, the Seljukus gradually secured the preponderance in central Anatolia. Masûd fought off only with difficulty a Byzantine project for the recovery of Anatolia collaps-...
ports of Antalya (seized by Kay Khusraw I in 601/1207) and Alanya (named 'Ala'iyya after the sultan 'Ala' al-Din Kay Kubadh I, 616-34/1220-37). Also, towards the end of the 6th/12th century the Turkmen amir of Tokat captured Samsun [see Samsun], thus bringing Turkish arms to the Black Sea shores, and this was followed by the conquest of Sinope [see Sinope] by 'Izz al-Din Kay Kâwûs I (608-16/1211-20) from the Trebizond Commneni in 611/1214. Hence whereas the Turkish powers of Anatolia had been essentially landlocked and confined to the interior plateau, they now had access to the sea. For the Saljuks, the opening up of their position at the north-south trade routes of Anatolia and trade relations with the Venetians—enemies of the Byzantines—in Antalya, so that the sultanate benefited from Venetian trade with Alexandria. Commerce between the Black Sea ports and the great Crimean entremêt of Sughdâgh tended to be controlled by the Greek principality of Trebizond, but from 1225 to 1229, the date of the definitive conquest of Sinope by the Trebizond Commneni, the Golden Horde [see Bâtu], Kay Kubadh I was able, through Kastamonu and the Black Sea ports, to establish his suzerainty in Sughdâgh [q.v. and kîkîm]. Towardsthe end of his life, in one of the periodic recrudescences of the old Turkish principle of patrimonial division, Kîlîc Arslan II divided his kingdom amongst his ten sons and some other male relatives, allotting various towns to each of them. Not surprisingly, a period of successive disputes and weaknesses ensued over the next two decades. In 1190 the Emperor Frederick Barbarossa and his Crusading army plundered Konya whilst Kîlîc Arslan took refuge in the citadel. But the crisis in the state was surmounted by the opening of the 7th/13th century, and the first forty years of this century were to mark the apogee of the sultanate under such rulers as Kay Kâwûs I and Kay Kubadh I. For half a century there was peace with Byzantium, the result of an agreement between Kay Kâwûs I and Theodore Lascaris, and the Saljuks henceforth concentrated their military efforts on the eastern frontiers, in Cilicia, Syria, al-Djazîra, and against Trebizond. But these eastern fringes of Anatolia were now in fact becoming threatened by the expansionism of the Khârazm Shahs [q.v.]. The Khârazmians first appeared in eastern Anatolia in 1226/1227, Kay Kubadh I endeavored to ally with the Ayyûbîds of Syria and Diyarbakr, equally menaced. The Saljuq sultan was now at the height of his power, as undisputed master of most of Anatolia and suzerain of the surrounding smaller Christian Greek, Armenian and Georgian states; the financial and artistic resources which he could command for building purposes and the splendor of his manner of life are seen in the meralles which he constructed, such as the Kubâdîhâbîd palace on Lake Beysehir and the Kay Kubâdîhîyya one near Kayseri [q.v.], both only now being excavated properly. The Mongols appeared in eastern Anatolia in 640/1242-3 at a time when the Ghiyâth al-Din Kay Khusrâw II had only just with difficulty quelled the prolonged rebellion in eastern and northern Anatolia, which had started in 638/1240, of a Turkish popular holy man, Baba Ishaq, who claimed to be a prophetic messenger [rasûl] [see Sâxîlî, and below, section IV. 2]. Kay Khusrâw II (634-44/1237-46) was distinctly less capable than his predecessors, but he assembled an army which included, as well as his own troops, Armenians, Greeks and Franks; however, he was defeated by the Mongol commander Baydu in Kûse Dagh [q.v.] in the region of Sivas (641/1243). Although the Mongols allowed the sultan to retain his throne in Konya, it was as a vassal of the Mongols liable to heavy tribute. There was subsequently little within the client Saljuq state when the dead Kay Khusrâw II's throne was disputed by the officials and commanders supporting his minor sons. Only in 659/1261 did Rukn al-Din Kay Kâwûs II establish a certain measure of power in Konya. But until his execution in 676/1277 by the Il Khânâd Abâka after a Mongol defeat at the hands of the invading Mamûlî army of Baybars of Egypt and Syria, real power in the Saljuq state was exercised by the Pâwâna Mu'ûn al-Dîn Sulaîman, from a former vizier of the Saljuqs, who worked closely with the Mongols and endeavored to reduce tensions between incoming Turco-Mongol soldiers and the established Turkmen groups of Anatolia. His death marks the end of semi-independence for the sultans in Konya, for the Il Khânâds now resolved to direct rule through their own alien Persian and Turco-Mongol officials and commanders. The Saljuq military forces were disbanded, to swell the ranks of mercenaries and bandits throughout the Anatolian countryside. Specifically Perso-Mongol institutions and practices were now introduced into Anatolia, in particular, fiscal ones (see below, section V. 2). Mongol taxation in Anatolia was undoubtedly heavy, but there was nevertheless little perceptible adverse effect on the general economic and commercial well-being of the area, with agricultural production and external trade remaining buoyant and with a continued endowment and construction of public and charitable buildings (see below, sections V. 2, and VI. 2). The Il Khânâds led various expeditions into Anatolia to quell local rulers such as the Karâmân-OGHULLAR [see KARAMÂN-OGHULLAR] and Atrakids [see AŠRAF-OGHULLAR] and other unrest, and to reassert Mongol financial demands, such as the expedition of Gaykhâtû in 690-1/1291-2 which spread terror and devastation throughout southern Anatolia as far west as Menteşe [see MENTEŞE-ELI] and the Aegean Sea coasts. Various ambitious Turco-Mongol commanders within Anatolia also led revolts, contributing to a general atmosphere of disintegration and tyrannical rule. The Jâniât Saljuq sultan 'Alâ' al-Dîn Kay Kâbûdî III was executed by Alâ' al-Dîn Masûd Il Khân's [q.v.] forces in 702/1303, and the sultanate disappeared, in the same obscure circumstances, as the Il Khânâd ruler in 708/1310. It was a period of control by the Il Khânâds' commanders of the Çobanî family [see ÇOBANÎS] that Anatolia eventually emerged into the age of the beylûks, with a fragmentation of âwâdu'î or petty principalities comparable to those in 5th/11th-century Muslim Spain. Some descendants of the Rûm Saljuqs seem to have survived into later times. One Kîlîc Arslan b. Luftî b. Sawelî, possibly a Saljuq, governed Alanya in the 1460s before the Ottoman annexation of 876/1471; and a later Ottoman historian, 'Ali, says that after the deposition of the last Saljuq Ghiyâth al-Dîn Masûd Il Khân, Ghazan granted Sinope to a Saljuq prince, Çâzî Celebi, who became active from there against the Greeks of Trebizond and the Genoese in the Black Sea.

IV. Intellectual and religious history

1. In Persia and 'Irāk

The territories of the Great Seljuks and their successors here formed a mighty empire, of an extent not seen since the heyday of the 'Abbasid caliphate, that century between 750 and 850 A.D. As heads of this empire, the Seljuk rulers in the second half of the 5th/11th century came to a working arrangement with the caliphs of Baghdad. In the 6th/12th century Hanbalism enjoyed a resurgence in influence under the patronage of the Shafi'i vizier Nizâm al-Mulk, who was able cautiously to promote his own favoured party and to endeavour to redress the balance somewhat in favour of the Ashâris and Shâfîis (see for the effects of this policy in one place, R. W. Bulliet, The political-religious history of Nishapûr in the eleventh century, in D.S. Richards (ed.), Islamic civilization 950-1150, Oxford 1973, 85-8). Hanbalism during the Seljuk period was essentially centred on Baghdad and Damascus (the latter city, of course, only indirectly ruled by the Seljuk sultan, see above). The central point of the Ashârî movement during the Seljuk period was in the 6th/12th century Baghdad. It enjoyed a resurgence in influence under the patronage of caliphal officials like Ibn Awwâl; see also the example of the Sufi Shaykh 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]).

The orthodox Sunnî, which al-Ghazâlî represented, was thus the religious force behind the Seljuk ideal of government. Now that the Shi'is, see also the example of the Sufi Shaykh 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]).

The orthodox Sunnî, which al-Ghazâlî represented, was thus the religious force behind the Seljuk ideal of government. Now that the Shi'is, see also the example of the Sufi Shaykh 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]).

Now that the Shi'is, see also the example of the Sufi Shaykh 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]).

The orthodox Sunnî, which al-Ghazâlî represented, was thus the religious force behind the Seljuk ideal of government. Now that the Shi'is, see also the example of the Sufi Shaykh 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]), and the Sufi bayat, 'Abd al-Kadir al-Djalâni (d. 561/1165 [q. v.]).
of the Saljuq empire, from Baghdād to Ḥaratāt, mentioned below in section V.I, concerning the ʿażābīyāt (see in general on Sunnism at this time, W. Madelung, Religious trends in early Islamic Iran, Albany, 1988, 26-38). The dominant forms of Sunnī kalām just described likewise triumphed in the end over more speculative forms of Islamic thought, those of the faṭalīya or philosophers [see FAṬALĪYA; FAYLĀṢUF], with their Aristotelian or Neoplatonist forms of reasoning; al-Ghazālī’s exposé in his autobiographical al-Muḥākāt aṭ-tnāīl of the insufficiency of philosophy to pro- vide salvation, for example, was a polemic against his exponents, his Taḥāfūt al-faṭalīya, were only two of several attempted refutations. Nevertheless, the succession of the great Ibn Sinā (d. 428/1037 [q.v.]) continued in the Persian lands during the Saljuq period, and the scientist, philosopher and poet ʿUmar Khayyām (d. 526/1131 c.) continued in the Persian lands during the first half of the 5th/11th century and mosques were destroyed (see MADRASA). I. 4 and NIZĀM AL-MULK). Much light is shown on the distribution of Shiʿism during the Saljuq period by two Shiʿi works of the time, the Kitāb al-Nakāt of ʿAbd al-Djalāl Kāzawī Rāzī (mid-6th/12th century) and the Tabṣira al-sawāmīn of Sayyid Muṭṭādāt Rāzī from the opening of the 7th/13th century. They confirm the impression of the historical and biographical sources that Khurasan, Transoxania were strongholds of Sunnī orthodoxy, apart from communities of sayyids in places like Nīshāpūr, Tūs and Bayḥāq, but that Shiʿism had some strong groups in northwestern Persia, with the Zaydīs in the Caspian provinces (where the khība was still made in some places for the Zaydi imām), and the Dīṣarīs or Twelvers influential in the urban centres of Dībāl like Rayy, Kāzawīn, Kaft, Khurāsān and Kashān, among their own madrasas and khātānas [q.v.] or tombs in some of these centres. The establishment of Ismāʿīlism in Daylam, the region of Iṣfāhān and Kuftūstān has already been noted (above, section I, 1). The two great groups of the Sunnis and Shiʿis, although on occasion at odds with each other, and with the Shiʿa stimulated as Rawḍat al-Dīn [see RAṽNA] in Sunnī works like Niẓām al-Mulk’s Sayyāt-i-nāma, in practice mostly co-existed peacefully with each other, and Shiʿis were represented quite significantly in the ranks of Saljuq officials right up to the office of vizier; the common enemy of both was Ismāʿīlism (see A. Bausani, in Camb. hist. of Iran, v, 290-6; J. Calmard, Le chisme imanite en Iran à l’époque seldjoukide d’après le Kitāb al-Naqd, in Le monde iranien et l’Islam, sociétés et cultures, i [Geneva-Paris, 1971], 43-67). The Saljuq period was further important for the distribution of Sunnism in provinces like Khurāsān, Transoxania and the Tiraḵ, with a distinctive school of Sufism now emerging in the Persian lands. This was particularly the case with Kuṭrūsān, where Sufism was henceforth to benefit much from official Saljuq patronage, whereas, up to the opening of the 5th/11th century, zubd or asceticism there had been mainly the province of the Karamīya (on whom see below), with some adherents of the Malamātiyya [q.v.] in the towns (see J. Chabbi, Societes et cultures, i, 43-67). From the 5th/11th century generation or so were ʿAbd Allāh al-Ansārī (d. 481/1090 [q.v.] and Abu ʿKāsim al-Khujāyir (d. 465/1072 [q.v.]) who, together with Abu ʿHāmid al-Ghazālī (d. 505/1111 [q.v.]), did much to incorporate the moderate form of Sufi mysticism into the fabric of Sunni orthodoxy. A notable feature of Persian Sufism at this time came to be its grouping around the maḥālātāt [see MAḤRĀKH] or dervish convents, and the influence of ʿUmar Khayyām and his contemporaries spread westwards through the Saljuq lands; thus Chabbi has noted that the founders of the riḥāb [q.v.] or centres for devotion, study, preaching, etc., in Baghdād during the first half of the 5th/11th century were almost all Kuṭrūsānis (La fonction du rībaṭ à Baghdād du Ve siècle au début du VIIe siècle, in REI, xlii, 1988, 26-38). The patricians of Nishāpūr. A study in medieval Islamic social history, Cambridge, Mass. 1972, 1972, 73-5, 254-5, and, in general, MADRASA. I. 4 and NIZĀM AL-MULK).

Much light is shown on the distribution of Shiʿism during the Saljuq period by two Shiʿi works of the time, the Kitāb al-Nakāt of ʿAbd al-Djalāl Kāzawī Rāzī (mid-6th/12th century) and the Tabṣira al-sawāmīn of Sayyid Muṭṭādāt Rāzī from the opening of the 7th/13th century. They confirm the impression of the historical and biographical sources that Khurasan, Transoxania were strongholds of Sunnī orthodoxy, apart from communities of sayyids in places like Nīshāpūr, Tūs and Bayḥāq, but that Shiʿism had some strong groups in northwestern Persia, with the Zaydīs in the Caspian provinces (where the khība was still made in some places for the Zaydi imām), and the Dīṣarīs or Twelvers influential in the urban centres of Dībāl like Rayy, Kāzawīn, Kaft, Khurāsān and Kashān, among their own madrasas and khātānas [q.v.] or tombs in some of these centres. The establishment of Ismāʿīlism in Daylam, the region of Iṣfāhān and Kuftūstān has already been noted (above, section I, 1). The two great groups of the Sunnis and Shiʿis, although on occasion at odds with each other, and with the Shiʿa stimulated as Rawḍat al-Dīn [see RAṽNA] in Sunnī works like Niẓām al-Mulk’s Sayyāt-i-nāma, in practice mostly co-existed peacefully with each other, and Shiʿis were represented quite significantly in the ranks of Saljuq officials right up to the office of vizier; the common enemy of both was Ismāʿīlism (see A. Bausani, in Camb. hist. of Iran, v, 290-6; J. Calmard, Le chisme imanite en Iran à l’époque seldjoukide d’après le Kitāb al-Naqd, in Le monde iranien et l’Islam, sociétés et cultures, i [Geneva-Paris, 1971], 43-67). The Saljuq period was further important for the distribution of Sunnism in provinces like Khurāsān, Transoxania and the Tiraḵ, with a distinctive school of Sufism now emerging in the Persian lands. This was particularly the case with Kuṭrūsān, where Sufism was henceforth to benefit much from official Saljuq patronage, whereas, up to the opening of the 5th/11th century, zubd or asceticism there had been mainly the province of the Karamīya (on whom see below), with some adherents of the Malamātiyya [q.v.] in the towns (see J. Chabbi, Societes et cultures, i, 43-67). From the 5th/11th century generation or so were ʿAbd Allāh al-Ansārī (d. 481/1090 [q.v.] and Abu ʿKāsim al-Khujāyir (d. 465/1072 [q.v.]) who, together with Abu ʿHāmid al-Ghazālī (d. 505/1111 [q.v.]), did much to incorporate the moderate form of Sufi mysticism into the fabric of Sunni orthodoxy. A notable feature of Persian Sufism at this time came to be its grouping around the maḥālātāt [see MAḤRĀKH] or dervish convents, and the influence of ʿUmar Khayyām and his contemporaries spread westwards through the Saljuq lands; thus Chabbi has noted that the founders of the riḥāb [q.v.] or centres for devotion, study, preaching, etc., in Baghdād during the first half of the 5th/11th century were almost all Kuṭrūsānis (La fonction du rībaṭ à Baghdād du Ve siècle au début du VIIe siècle, in REI, xlii,
The next century, the 6th/12th one, was notable for the formation of several of the major dervish orders (fursk [see ṭarka]), including the Kadiri Tariqah of the Yasawis [see nādir yasawi], the Rifa’iyya, the Suhrawardiyya [q.v.], and the Kubrawiyya [see kubb, nāqīm al-dīn]. See further, J.S. Trimingham, The Sufi orders in Islam, Oxford, 1971, 31-60; Bausani, in Camb. hist. of Iran, v, 296-302; Madelung, op. cit., 49-53.

As just noted, the ascetic strain within Sufism originally had had its counterpart in eastern Persia in the form of the ascetic but activist movement of the Karramiyya [q.v.], especially vociferous in Nishapur and strong in the rural, mountainous, eastern fringes of the province, what is now western Afghanistan. In the early years of the 5th/11th century, the Karramiyya and their khānakāhs had enjoyed some patronage from the Ghaznavids; this favour disappeared with the advent of the Saldjūks and became an active disapproval on the part of the ruling authority, but the Karramiyya remained an assertive element in Nishapur and elsewhere all through that same century, as their mention as participants in the ʿasāṣīyya (of the time shows); it was only during the course of the succeeding 6th/12th century that they were pushed eastwards into regions less accessible to Saldjūk control such as Ghur and Ghur; thus the Karrāmī madrasa at Baybāk, founded in the opening years of the 5th/11th century, had disappeared when the local historian Ibn Funduk wrote (in 563/1168), although the Hanafi and Shafiʿī ones still survived (Ṭūrkiyya; Bayhāk, ed. Ahmad Bahmanvār, Tehran 1317/1938, 194, 220-1; and, in general on the Karrāmīyya, Madelung, op. cit., 39-46).

Bibliography: Given in the article; see especially Bausani’s ch. Religion in the Saljuq period, in Camb. hist. Iran, v, 283-302; and Madelung’s Religious trends in early Islamic Iran, which in part covers the Saldjūk period, notably chs. 3-4, 6-7.

2. In Anatolia

The Turkmen who entered Anatolia no doubt brought with them vestiges of the pre-Islamic, Inner Asian shamanistic past (survivals of which were explored by Fuad Köprülü in various of his works, such as his Influenz des chamanismus turko-mongol auf die ordres mystiques musulmans, Memes de l’Institut de Turcologie de l’Université de Stamboul, N.S. 1, Istanbul 1929), but the ascetics did not have more than a token presence in pagan towns, and even so, his Mirsād al-ʿibād (see below, section VII. 2) became very popular in Anatolia and was later translated into Turkish.

Such religious traditions and practices as those outlined above helped to consolidate what became the dominant, official Sunnism of Anatolia. But at a less exalted and articulate level were currents of belief which may well have gone back to the animistic past of the Turks, mentioned at the beginning of this section, especially amongst the Turkmen outside the towns, and there probably existed also ill-formed and emotionally-based pro-Shīʿī feelings such as were to be undoubtedly discernible amongst the ʿAlawī Turkmen of eastern Anatolia in the early Ottoman period. Only at times of particular political and social stress or upheaval did these somewhat inchoate trends of belief and thought come to the surface, assume tangible form and impinge on the wider political scene. Such was the case with the Bahaʾī movement, a religious one with social overtones, which disturbed much of Anatolia in the years just before the Mongol invasion there. Its leader, a popular, charismatic figure, Baba Išākh, defied the Saldjūk armies for some time, and his movement was never completely ex-
Finally, a word should be said about the possible interaction of the great faiths in Anatolia, specifically between Islam and the Christian substratum there. It is hard to reach firm conclusions on such an elusive matter, but it seems that certain sultans, such as Kay Kuvshâb, were enlightened and tolerant rulers, conscious of the mixture of faiths and ethnic over which they ruled. There were both Armenians and Greeks in the capital Konya, the latter with their monastery of St. Chariton and some Jews. Rûmî seems to have had harmonious relations with the local Dhimmi, whilst remaining convinced of his own divine mission to convert them. Throughout Anatolia there was at the popular level an interchange, or double veneration, of both faiths. Thus, in the 8th/14th-century Sufi biographer Aflaki, ‘Abd al-Qadir Bektash may have been a disciple of Baba Ishâk [see BABA芝; BETKASHTI].

Thus by Malik Shâh’s reign, the sultan came to exercise a delimited territorial authority, although it was one exerted with different degrees of intensity. Right to the end of the Saldjuk empire, there were whole stretches of territory which were substantially left, usually on payment of some taxation, to their indigenous tribal peoples, such as those of Kurdistân and Luristan in Dîjâbâl and much of Fârs, and the Kufs and Balûc in Kirmân and Mâruk, or to the Oghuz nomads in such areas as the Mukan steppes in Arrân [q. v.].

In any case, the early sultans, with their Central Asian tribal origins, did not at first conceive of themselves as territorial monarchs but as leaders of nomadic hordes who happened to range with their flocks in search of pasture over a particularly large stretch of territory within the Dâr al-Islâm. But these ideas soon became modified as, already by the end of Toghrîl’s reign and during that of Alp Arslân, the sultans settled down as rulers over a defined territory, even though the Saldjûks never, until the end of the dynasty, resided in one permanent, fixed capital. As rulers over an empire of vastly differing climatic and topographical zones, from the deserts and steppe lands of northern Syria and ‘Irâk to mountains and plateaus of Persia, they often moved between summer and winter capitals, echoing their nomadic past. Hence a more delimited territorial authority, although it was one exerted with different degrees of intensity. Right to the end of the Saldjuk empire, there were whole stretches of territory which were substantially left, usually on payment of some taxation, to their indigenous tribal peoples, such as those of Kurdistân and Luristan in Dîjâbâl and much of Fârs, and the Kufs and Balûc in Kirmân and Mâruk, or to the Oghuz nomads in such areas as the Mukan steppes in Arrân [q. v.].

Aspects of Saljuq-Ghuzz settlement in Persia, see Lambton concluded (op. cit., 124-5), that the additional nomads who came into Persia with the Saldjûk invasions did not cause widespread dislocation but may even have contributed to the general prosperity of the lands in that they now supplied the cities and towns with milk and meat products and may have contributed to the stock of transport animals available for trading purposes.

On the fringes of the empire, local princes were often allowed to remain as feudatories. In the northwest, the Shaddâdids [q. v.] of Dwîn and Gandja and the Marwânids [q. v.] of Dîyâb Bakr were left in power until Malik Shâh’s reign. In ‘Irâk, the ‘Ukaylids [q. v.] held Mawṣûl till the end of the 9th/11th century, with minor branches persisting in Diyar Mûdar till the advent of the Zangûs, whilst the Mazyâdids [see MAZYAD, BANU] of the upper Persian Gulf region (see further, below). But in general, the sultans deliberately eschewed this; Nizâm al-Mulk’s lament that the Saldjûk sultans showed no interest in settlements is well-known (Siyyašt-nâma, § 10), and Anâhiwrân b. Khâlid says that Alp Arslân’s abolition of the previously-existing bârid and khobar system, on the basis of what he calls a ‘whim’ (uwm) but which was more likely a deliberate choice, was a cause of the spread of Islam and of the terror in people’s minds which exaggerated, ill-informed accounts of the Assassins’ activities brought about (al-Bundârî, ed. Houtsma, 67).

In any case, the early sultans, with their Central Asian tribal origins, did not at first conceive of themselves as territorial monarchs but as leaders of nomadic hordes who happened to range with their flocks in search of pasture over a particularly large stretch of territory within the Dâr al-Islâm. But these ideas soon became modified as, already by the end of Toghrîl’s reign and during that of Alp Arslân, the sultans settled down as rulers over a defined territory, even though the Saldjûks never, until the end of the dynasty, resided in one permanent, fixed capital. As rulers over an empire of vastly differing climatic and topographical zones, from the deserts and steppe lands of northern Syria and ‘Irâk to mountains and plateaus of Persia, they often moved between summer and winter capitals, echoing their nomadic past. Hence a more delimited territorial authority, although it was one exerted with different degrees of intensity. Right to the end of the Saldjuk empire, there were whole stretches of territory which were substantially left, usually on payment of some taxation, to their indigenous tribal peoples, such as those of Kurdistân and Luristan in Dîjâbâl and much of Fârs, and the Kufs and Balûc in Kirmân and Mâruk, or to the Oghuz nomads in such areas as the Mukan steppes in Arrân [q. v.].

Aspects of Saljuq-Ghuzz settlement in Persia, see Lambton concluded (op. cit., 124-5), that the additional nomads who came into Persia with the Saldjûk invasions did not cause widespread dislocation but may even have contributed to the general prosperity of the lands in that they now supplied the cities and towns with milk and meat products and may have contributed to the stock of transport animals available for trading purposes.

On the fringes of the empire, local princes were often allowed to remain as feudatories. In the northwest, the Shaddâdids [q. v.] of Dwîn and Gandja and the Marwânids [q. v.] of Dîyâb Bakr were left in power until Malik Shâh’s reign. In ‘Irâk, the ‘Ukaylids [q. v.] held Mawṣûl till the end of the 9th/11th century, with minor branches persisting in Diyar Mûdar till the advent of the Zangûs, whilst the Mazyâdids [see MAZYAD, BANU] of the upper Persian Gulf region (see further, below). But in general, the sultans deliberately eschewed this; Nizâm al-Mulk’s lament that the Saldjûk sultans showed no interest in settlements is well-known (Siyyašt-nâmã, § 10), and Anûhiwrân b. Khâlid says that Alp Arslân’s abolition of the previously-existing bârid and khobar system, on the basis of what he calls a ‘whim’ (uwm) but which was more likely a deliberate choice, was a cause of the spread of Islam and of the terror in people’s minds which exaggerated, ill-informed accounts of the Assassins’ activities brought about (al-Bundârî, ed. Houtsma, 67).
their authority by military force into lands outside the empire, as happened with the Karakhanids in Transoxania on various occasions, the Ghaznavids in eastern Afghanistan (see above, section III. 1) and the Shirwanids in eastern Caucasus (see al-Bundari, 139-41), tribute would be exacted from those potentates, although this source of income was obviously sporadic.

Within the directly-administered areas of the empire, much land was, in the course of time, alienated by assignments of revenue on particular lands, ikhtisāds, a term which covered, however, a very wide variety of different types of grant (see Lambton, in Camb. Hist. of Iran, v, 233-4; and irdâr). The grants of the first Saljuq sultans were mainly as appanages for other members of the family who had claims, under tribal concepts, of a share-out of the total assets of the ruling family or the chiefs; these were especially to be found in northern Persia, Khurâsan and the upper Oxus lands (see above, sections II and III. 2). But grants were also made at an early date to the Turkish generals of the professional, standing army which Toghrîli in his later years, and then Alp Arslan and Malik Shâh, were compelled to recruit after the danger of sole reliance on the Oghuz tribal bands had been demonstrated by the latter's part in the revolts of disgruntled Saljuq princes, such as Ibrâhîm Înal and Kawurd (see above, section I). Such earlier grants were delegations of the sultan's authority, and did not imply any hierarchy of vassalage or a bestowal of permanent territorial or financial rights. These last only crept in during the 6th/12th century, when the warring Saljuq sultans and princes were desperate to acquire troops and had to alienate more and more lands to great commanders as the price of their military support. Eventually, the process was to lead to the formation of the autonomous atabeg principalities of northern and western Persia, of northern Syria and al-Djâzîrâ and of eastern Anatolia (see above, section II), but, from the legal aspect, these principalities rested upon an act of usurpation and not one of delegation or vassalage. All these trends were to have long-term effects upon land utilisation, the social and economic status of the cultivators and the ethnic complexion of the regions in question. For a fuller consideration of the trends, see Lambton, in Camb. Hist. of Iran, v, 231 ff.; edem, Camb. Hist. of Iran, v, 231 ff.; edem, Continuity and change in medieval Persia, London 1968, 97-115; Bosworth, in ibid., 82-4; and irdâr.

The heart of the sultans' power lay in their own court entourage, the dargâh, whose smooth functioning was ensured by a series of influential officials such as the waqil-i dâr or intendant, the hâjîqâs or chamberlains, the qâbâma-dâr or master of the sultans' wardrobe, the hâjîqâs-dâr or head of the royal stables, the kârân-sâdâr or master of the royal kitchens; the latter's function were especially important for the dispensing of general hospitality in accordance with steppe traditions and of feasts (şabêns) for the Saljuqs' tribal followers, the providing of which Nizâm al-Mulk, Siyâsat-nâmâ, 8-17; and, in general, for courts and court life during the Saljuq period, Bosworth, Etr. Art. Courts and courtesans. iii. In the Islamic period to the Mongol conquest).

The means by which this power of the sultans was exercised were, firstly, through the army and the coercive force which it could exert, and secondly, through the civil administration of the empire controlled by a series of diwâns, both of which were, of course, interconnected through the overriding need for the provision of finance for them. By Malik Shâh's time the army's main strength lay in its professional troops, in part supported by tâdâs but to a significant extent still paid directly in cash from the royal treasury (cf. Nizâm al-Mulk, Siyâsat-nâmâ, § 23). Its nucleus was the force of slave gâšâm and freedmen troops, a large proportion of whom, though not all, were Turks. Supplementing this were the free troops, and here, as with the slave core for an army, the Saljuqs were following in the steps of other Middle Eastern imperial powers like the Fâtimids and Ghaznavids by recruiting from a wide array of races. Nizâm al-Mulk recommended the employment of Daylamis, Khurâsânis, Georgians and Şabânâkârî Kurds (Siyâsat-nâmâ, § 24). This army was normally stationed in the capital with the sultan himself, and according to Râwandi, the number of cavalrymen was not allowed to fall below 46,000 (see M.F. Sanaullah, The decline of the Saljuq empire, Calcutta 1938, 18-35; Uzunçarshî, op. cit., 56-61; Bosworth, in Camb. Hist. of Iran, v, 80-1; Lambton, Continuity and change in medieval Persia, 4-14; Chulaman, ii; and Harb. v).

Complementing the court's role in the running of the state were the central administration, comprising essentially the diwân-i ašâ, presided over by the sultan's chief executive officer, the vizier. The vizier, and the personnel of his bureaux, were normally representatives of the Peri-Islamic secretarial class. It is possible that, in the Saljuq period, some of these had received an education and training in the madrasas (for which, see above, section IV. 1), although this point requires further research. The vizier headed a complex of diwân, his intermediary and link with the court being the waqil-i dâr (cf. al-Bundari, 93-4). The diwân-i ašâ was above all responsible for the provision of finance for the sultan and hence for the running of the empire, and had component diwâns as the chancery, for official and diplomatic correspondence (irtîfâ); the finance bureau, for the collection of revenue and its allocation (irtîfâ); the bureau for overseeing accounts and financial transactions (irtîfâ); and the department of the army (irtîfâ), responsible for the recruitment, payment and fighting calibre of the troops. The heads of these component bureaux were powerful officials in their own right, who not infrequently followed their own policies or had supporters at court who might be at odds with the vizier. Other high-ranking persons in the state, such as the sultans' consorts and the queen-mothers and Saljuq princes
allotted appanages in the provinces, might have their own households with miniature replicas of the central divāns (see Uzunçarşılı, op. cit., 42-51; Lambton, in Camb. hist. of Iran, v, 257 ff.).

Nevertheless, the vizier was a very powerful figure throughout the Saldjūk period, with his position buttressed by the patronage which he exercised and the opportunities which he had for self-enrichment through confiscations, etc. He normally had his own ikāt, and an outstanding figure like Nizām al-Mulk built up around himself what was in effect a private army of mamluks and other retainers, the Nizāmiyya [q.v.] being too powerful to play the significant role in politics well after their master’s death.

Justice and equity of an “administrative” or “secular” kind was exercised through the sultan’s own māzālim [q.v.] jurisdiction, both personally and by delegation to special māzālim courts. At the side of these, the local kādis dispensed justice according to the šarī‘a, and with the restatement of the relationship between ruler and retinue, the potency and the role of the kādi were heightened. He could with impunity ‘play’ the important role in politics well after their master’s death.

The cities and towns of Persia, Īrāq, al-Djazīra and Syria seem in general to have flourished during the 5th/11th century, doubless benefiting from the general internal peace in the years before Malik Šāh’s death and having a resilience and continuity of tradition which enabled them to function and to prosper to a fair extent in the more troubled decades of the 6th/12th century, when the Crusaders and Ismā‘īlīs destabilised Syria, when al-Djazīra and western Khurasan were devastated by the warfare among rival Saldjūk princes and the atabegs, and when the ascendency of anarchic Oghuz tribesmen in Khūrāsān and Kirmān led to widespread looting and devastation there, a foretaste of the worse disasters which the arrival of the Mongols was to bring.

Whether there was in the 6th/12th century a distinct decline in economic life, a deterioration of the status and richness of the town bourgeoisies, the better judges, theoretically the deputies of the caliph and deriving their spiritual jurisdiction from him, were in practice appointed by the sultan and were salaried servants of the sultanate, as were the khaṭibs [q.v.] or preachers of the Friday sermon and the muḥtasibs or market inspectors [see Ǧīṣa]. A chief judge of the empire, the kāddi-yi Ǧīṣa-yi māmlik, is mentioned under Alp Arslān, with oversight of the religious law, of religious buildings and of awkāf or pious trusts (which spread considerably within the Saldjūk empire as a result of benefactions from the great amīrs, the atabegs and the women in the ruling classes, see Lambton, Continuity and change in medieval Persia, 149-51), but the mass of judges were local officials in the towns of the empire and thus served as a link between the central government and the local urban communities (see eadem, in Camb. hist. of Iran, v, 269-72).

There were, of course, counterforces in the cities and towns and in their agricultural hinterlands working against this urban group solidarity in the face of external attackers or tyrannical government actions. The ʿabd b. Muhammad, a powerful group of sultan Masʿūd’s, particularly after the weakening of the sultan’s power from Berk-yaruk’s accession onwards, reduced the amount of lands from which taxation could be directly collected and drove the rulers into an increased reliance on non-canonical taxes, mukāb [see māks]. Yet as a counter to this, one may note that the Saldjūk government, for its part, had an enduring interest in fostering, as far as possible, the economic well-being of the cities and towns, with their roles as centres of craft production and of long-distance trading, from which they derived so much of the taxation needed to maintain an independent life, or autonomous life of its own within the concept of divinely-dispensed authority in Islam. But the local historians of cities and towns like Nīṣāhpūr, Bayhaḵ, Harāt, Iṣfahān and Shīrāz certainly demonstrate the vitality of urban life at this time and the cohesiveness and common interests of their oligarchies, whether these comprised Ḥanafīs, Shāfiʿis or Hanbalis (and also, in Kūrāsān, Karrāmīs). This class of ‘ālama’; merchants and other notables largely monopolised such offices as those of kādi, khaṭīb, etc. (see above). Above all, it was from their ranks that there came the raʿīs or mayor, the mouthpiece of the town notables vis-à-vis the provincial and central government; and, since the relations between the towns and the ruling authority were essentially financial, it was he who forwarded the taxation due from the town to the local diwān. See, in general, raʿīs-īs. 1. and 2.; Bosworth, The Ghaznavids, 171 ff.; Bulliet, op. cit., 66-9. For the duties of a raʿīs in Māzandarān and Gurgān in the second quarter of the 12th century A.D., Lambton, The administration of Sanjar’s empire as illustrated in the Atabat al-katatba, 383-7. For these institutions in Syria under Saldjūk rule, A. Havemann, Riʿāsa wa ḍaqaqa. Institutionen als Ausdruck wechselder Kräfteverhältnisse in syrischen Städten vom 10. bis zum 12. Jahrhundert, Freiburg-im Breisgau vom 10. bis zum 12. Jahrhundert, Freiburg-im Breisgau 1973, and idem, The vizier and the raʿīs in Saljuq Syria: the struggle for urban self-representation, in JIME, xx (1989), 233-42.
ing to Rawandl, internal factional feuding, rather than the ravages of the Oghuz, which really consumed the ruin of the city (cited in Bulliet, The political IV). But not long after this, both of the madhhabbs were uniting in Nishapur against the Karlāmiyya (see Ibn al-Athir, ed. Beirut, x, 251, year 488/1095).

Another divisive element in certain cities and towns of the Saldjuk empire at this time was that of the 'ayyars [q.v.] or mobsters. Baghdād, the Syrian towns and those of Khurāsān suffered especially badly, but there is reason to believe that towns elsewhere had similar problems, conceivably evidence of some underlying social-political malaise in them such as the exclusion of sections of the urban populace from participation in higher municipal affairs; but this is conjecture. Outbreaks of 'ayyars violence were a matter of concern for the urban authorities, who alone could take steps to curb it; hence when, at Bayhaq, 'ayyars took advantage of the relaxation of central authority in the state after Malik Shāh's death in 485/1092, one of the town's numerous and influential body of Sayyids organised, at his own expense, a police force of citizens and their slaves against unruly elements (Ibn Funduk, Ta'rikh-i Bayhaḵ, ed. Bahmanyār, 274-5; cf. J. Aubin, L'aristocratie urbain dans l'Iran seldjukide: l'exemple de Sābāzvār, in Mélanges René Crozet, Poitiers 1966, 328).

As the secular counterparts of the caliphs, the Sunni Saldjuk sultans had an obligation to further Islamic learning within their dominions. The role of them and their servants in the movement for founding madrasas, mosque- and shrine-colleges, etc., has been outlined above, in section IV. 1. The sultans of the first two or three generations were probably illiterate, and undoubtedly so in Persian and Arabic; it must be remembered that Malik Shāh was the first monarch not to grow up purely in the Oghuz tribal environment. Barthold (Turkestan dovon, p. 308) thought Sardarjâr remained illiterate all his life, but this requires further investigation. By the 6th/12th century, however, various of the sultans in western Persia and 'Irāk are praised in the sources for their culture and education. Thus Anāshirwān b. Khālid, who is severely condemnatory about Mahmūd b. Muhammad's policies, nevertheless praises him for his fine Arabic scholarship, his knowledge of poetry and adab, history and fīrs; and among the Saldjuk amirs of Kirmān of this century, Arslān Shāh and Muḥammad Shāh encouraged scholarship by providing bursaries for students, pensions for the fukahā, etc. (al-Bundarl, 156; Muḥammad b. Ibrāhīm, 25-6, 29).

Concerning the non-Muslim population of the empire, mentions of the dhimmis, Jews, Christians and Zoroastrians, become sparser in the Saldjuk period than for the preceding ones, e.g. the Būyid period. The Christians were still, however, strong in 'Irāk and Iranian provinces of Khūzestān and Fārs and the city of Isfahān, and the 'Abbāsids and the Saldjuk sultans in Baghdād used the services extensively of Jews and Christians for the traditional pursuits of these last, such as administration and the practice of medicine. Despite mention still of a metropolitan for the Christians of Fārs in the early Saldjuk period, the western Persian communities of Christians and of Zoroastrians (the latter of whom life was an important element in Būyid Fārs). It seems to have fallen into decline, the prelude to the eventual disappearance of the Christians, at least, there. The Christians of 'Irāk, on the other hand remained numerous and vigorous, and influential enough in public life to bring down on their heads sporadic Muslim persecution. Thus the caliph's vizier Abū Ḫubbād al-Rūḍāwarī [q.v.] in 484/1091 drastically enforced the discriminatory laws against dhimmis [q.v.], bringing about the conversion to Islam of the Christian head of the caliph's dīwān al-ʿināshāʾ, Abū Saʿīd b. Ibn al-Mawṣīlāyā and of his nephew, the sāḥib al-ḵabar Abū Nasr Ḥabīl Allāh (al-Bundārī, 78; Ibn al-Athir, x, 186). In the east, the metropolitan of Marw was still the most important dignitary of the Nestorian Church in Khurāsān, and a bishop of Tūs is mentioned as late as 1279; Abū Saʿīd b. Abī 'Iṯ̄̄khtyr of an important trade route from the Persian Gulf and the Gulf of Oman shores northwards through Khūzestān and Khūrsān, a trade which had international ramifications, since Hindus and Greeks are mentioned as amongst the merchants at the trading suburb of Kumāḏin (the Camadi of Marco Polo, through whose ruined site he passed in the later 7th/13th century, see Yule and Cordier, The book of Ser Marco Polo, London 1903, i, 97-9) outside Djīrūf in Khūzestān, where there were extensive warehouses storing goods in transit (Muḥammad b. Ibrāhīm, 49). At the northern end of this trade route, Nishāpūr was the great emporium of Khurasān, often with a special quarter of the town's numerous and influential body of madrasas, warehouses for storing goods in transit (Muhammad b. Ibrahim, 49).

It is hard to find concrete information on trade and economic activities within the Saldjuk empire. The rich geographical and travel literature in Arabic and Persian of the 3rd-4th/9th-10th centuries dwindles almost to nothing during the Saldjuk period, and there is a general paucity of information in the historical sources. One region about which we know a certain amount is Kirmān and eastern Persia, from items mentioned by the local historians of Kirman and noted above in section III. 3. They reveal the existence of an important trade route from the Persian Gulf and the Gulf of Oman shores northwards through Kirmān to Kuhistān and Khūrsān, a trade which had international ramifications, since Hindus and Greeks are mentioned as amongst the merchants at the trading suburb of Kumāḏin (the Camadi of Marco Polo, through whose ruined site he passed in the later 7th/13th century, see Yule and Cordier, The book of Ser Marco Polo, London 1903, i, 97-9) outside Djīrūf in Khūzestān, where there were extensive warehouses storing goods in transit (Muḥammad b. Ibrāhīm, 49). At the northern end of this trade route, Nishāpūr was the great emporium of Khūrsān at this time, certainly up to the Ghuzz sackings of the second half of the 6th/12th century. It was probably the main centre in the Great Saldjuk state for the minting of the Saldjūks' gold coinage, judging by the
number of extant dinârs which were minted there (see further, below, section VIII. 1), and although information is regrettably lacking, it must have continued, as it did in Sâmânîd and Ghâznavid times, to have commercial contacts with the Central Asian steppelands and beyond.

The southern end of the route, running down to the Gulf of Oman and across it, connected the eastern Persian world with the Arabian one. Al-Mukaddasi, 321, had noted that the name of ka‘în, in Kuhîstân, had a great renown in ʿUmân; at the beginning of the Sâldjûk period, the traveller Nâsîr-i Khusrâw [q. v.] found that transactions at Tabâs (al-Tamr) in the eastern part of the Great Desert, Abu ʿl-Ḥasan Gilâkî, had established perfect security in a region formerly terrorised by the Kufs who must, in any case, have been pushed back southwards by the incoming bands of Oghuz [see KUFS] seem to have been done in the dinârs of Nîshâpûr (Ṣafar-nâmâ, ed. Muhammad Dâbir-Sîyâkî, Tehran 1335/1956, 106, tr. W. M. Thackston, Nâsîr-e Khusrâw’s Book of Travels, Albany 1986, 85). The Kufs or Kûfiî bandits who had been such a menace to commerce and to travellers along the edges of the central Great Desert of Persia in the Bâyûd period [see KUFS] seem to have been mastered by Kâwûrûd, who also took over against a bribe the frontier region of the Bâlût; Nâsîr-i Khusrâw, again, found that the amûr of Tabâs (al-Tamr) had only a local commercial role to play, probably as a centre for pearl-fishing. The towns on or near the Gulf, such as Siraf [q. v.], had an international trade, as entrepôts for South and South-East Asian products destined for the central desert regions, but the late Il-Khânîd period writer Hamd Allâh [q. v.] capital, and now had only a small area enclosed by a wall against the Shâbânîkânâ and the Turkmen, with much of its former area ruinous; another fairly important town of Fârs, Kâzârûn, had suffered similarly (Ībn al-Balkhî, 132-4, 145-6, tr. 36-8, 55-6). It was only in the Il-Khânîd and Muṣaffârîd periods that Shîrûsân revived completely (see Aubin, op. cit., 297-9; q. v.).

We have virtually no information about trade along the great, historic highway across Persia from ʿIrâk either via the more northerly Hamadâtân route or the more southerly Isfahân one to Rây and Khûrûsân, although this must have continued to be a major commercial artery between the central Islamic lands and the northeastern fringes of the Islamic world, even after the comparative peace within the Sâldjûk empire up to Malik Shâh was destroyed by fairly continuous fighting in Dîjbûl, Khurûsân, and Lurûsân during the ensuing succession disputes. We do know, however, that the great cities along this route continued to thrive. Hamadâtân [q. v.] was a lively trade centre with a prosperous agricultural hinterland, and in the later decades of the 6th/12th century served as the sultans’ capital. Rây [q. v.] was taken over by Ṭoḡhrîl Beg in 434/1042-3 from the Turkmen leader ʿIrâbîm IÎnâl when the former came westwards from Khûrûsân, becoming its capital for a while, and the city flourished for the next half-century; fine dinârs were minted there by Ṭoḡhrîl, Alp Arslân and Malik Shâh. After 485/1092, however, the internecine warfare had deleterious effects on the city’s prosperity; from this date, the Sâldjûk coins minted there become scarcer and almost dry up, being of feeble quality, reflecting the degeneration of the coinage (see G. C. Miles, The numismatic history of Rây, New York 1938, 196-217. The standard of the coinage is, of course, concrete evidence of the health or otherwise of the economy in general; for a consideration of the Great Sâldjûk coins, see below, section VIII. 1). It is Isfahân [q. v.] that we are best informed about. It finally passed into Ṭoḡhrîl’s possession from the Kâkûyids in 443/1051, and the sultan immediately put in hand measures for its revival after the preceding years of economic stagnation. On his homeward journey in 444/1052, Nâsîr-i Khusrâw found it in a highly flourishing state, with busy markets, including a bazaar for the money-changers with 200 shops and fifty kâhûns in one street alone, whilst the caravan with which he travelled brought 300 assloads of goods (Ṣafar-nâmâ, 123, tr. 90). Ṭoḡhrîl moved thither his capital from Rây, and the city continued till the death of ʿIrâbîm IÎnâl in 485/1092, on the death of Malik Shâh to be a favoured centre for the sultans, directly administered by them and not granted out to one of their servants or commanders (Mâfarrukhî, K. Mâhâîm Isfahân, ed. Sayyid Djalâl al-Dîn Tîhrânî, Tehran 1312/1933, 101 ff.; and see, in general, on the cities of Persia at this time, Lambton, Aspects of Sâldjûq-Ghâzî settlement in Persia, 116-20).

One result of the general healthiness of the economy was the rapidity with which some of the cities in the areas of paper manufacture, such as Rayy, during the 5th/11th century at least seems to have been a buoyant revenue accruing from the lands of the empire, comparing favourably both with the preceding Bâyûd period and certainly with the succeeding Mongol and Il-Khânîd ones. We have no global figures stemming from the Sâldjûk period itself, but the late Il-Khânîd period writer Hamd Allâh...
MustawfT states, from a lost Risdla-yi Malik Shahi, that the total revenue of the empire was in that sultan’s time 215 million red gold dinārs, the equivalent of roughly 500 million of his own time but in fact a much higher figure than that during Il-Khānīd times (cited in Lambton, op. cit., 120-1).

Bibliography: Given in the article. There are no full-scale works devoted to Seljūk social and economic history, nor any chapters on them in Camb. hist. of Iran, v, but for administration, A. K.S. Lambton's magnum opus on the indivisible structure of the Seljūk empire, in ibid., 203-82, provides a detailed account, to be supplemented now by Carla L. Klausner, The Seljuk vezirate. A study of civil administration 1055-1194, Cambridge, Mass. 1973, and Bulliet's The patricians of Nishapur. Also, Lambton's Continuity and change in medieval Persia, whilst covering a wider expanse of Persian history than just the Seljūk period, nevertheless contains much important information and attention to land tenure and social conditions. The question of patronage, loyalty, clientelism, etc. in the Seljūk empire has recently been examined by A. Jurado Aceituno, La 'hidma' seljūqi: la red de relaciones de dependencia mutua, la dinámica del poder y las formas de obtención de los beneficios, diss. Universidad Autónoma de Madrid 1994, unpubl.

2. In Anatolia
The Seljūk administration in Anatolia was probably less developed and certainly less extensive in its sphere of operations than that of the Great Seljūks. The rulers depended on secretaries and officials from the Seljūk lands further east, essentially of Perso-Islamic culture, for any existing, pre-Seljūk Greek or Armenian officials would have been of little practical use, given their ignorance of Arabic and Persian and of the whole Islamic administrative tradition. Hence the administration, like the culture of the Rum Seljūks, became strongly Persian in ethos. In the formative, earlier period, however, the possibility of extraneous influences from the earlier, Byzantine civilisation should be considered, and the question whether the Seljūks and, after them, the Ottomans, made use of Byzantine models or worked purely with the Perso-Islamic and/or native Turkish traditions, has equivalency of other officials generally used Persian for correspondence, but Arabic was naturally of great importance e.g. for diplomatic relations with the Muslim powers of Syria, Egypt and 'ırāk; Ibn Bībī even mentions niyāt = notarī, who were presumably used for correspondence with Byzantine and other Christian powers and, possibly, for contacts with the indigenous Greek population of Anatolia. Also, Turkish must have been necessary for communicating with the increasing numbers of Turks amongst the Anatolian population, the towns and the countryside; and, in particular, with the army, whose payment was the responsibility of the central dīwān or one of its offshoots concerned with military affairs. When the Karamānīd Shams al-Dīn Muḥammad captured Konya in 675/1277, he is said to have ordered that Turkish only should be used in the chancery there
sisted, which suffered economic and social dislocation, whereas the sultans had an obvious interest in promoting the agricultural prosperity of their dominions. The taxes levied by the Saldjuk administration on the sultanate in the later 7th/13th century, however, taxation on all classes must have increased perceptibly. The sheer productivity of these centuries in the visual arts [see KHAZAF and MA'ADIN represents, in comparison with the output of earlier centuries, a quantum of pottery and coarse glazed ware reminiscent of folk art, elaborately inlaid metalwork to the arts of the book and architecture. It is important to note that this time frame begins well before the Saldjuk period and ends well after it, a reminder that the chronology of artistic styles is often out of phase with that of political history. A by-product of this is that the overlap between Saldjuk art and that of the Buyids, Ghaznawids, Ghurids, Karakhanids and Ghurids, and its nature is uncertain (e.g. in the western and central regions, the Saldjuk art is still either unavailable or inadequately contextualised. Thus the originality of Saldjuk art is apt to be exaggerated.

Despite these burdens, the lands of the sultanate continued in general to prosper. As noted above, during the first half of the 7th/13th century the sultans secured access to the Mediterranean and the Black Sea shores, and even made their presence felt as far away as the Crimea (see above, section III. 5). There was consequently a great fillip to internal trade and the transit trade across Anatolia, signalled by a perceptible building programme by the sultans, from Kilik Arslan II in the later 6th/12th century onwards, and by great men in the state, along the Anatolian caravan routes, seen in bridges, caravanserais, ‘emirets and other facilities for travellers and merchants (see below, section VI. 2). The first tentative trade agreements were made with European powers like the Venetians, specifically in this case concerning access to Mediterranean trade through Antalya (610/1213 and 613/1216). At the same time, urban life within the sultanate revived by the later 6th/12th century from its depressed state under the later Byzantines, and many towns received new or strengthened walls, visible now in the walls of Alanya (those of the walls of Konya only having disappeared in recent times). Although the Saldjuk towns, almost all of them corresponding to their Byzantine and/or classical forerunners, have largely died out, some important towns elsewhere in the Islamic world, they had a vigorous life, accentuated by the mélange of peoples and faiths within them. In the 7th/13th century we have mention of such groups of mixed parentage called ikdih ‘cross-breeds’, and of the akids [q.v.], whose importance in almost all the towns of Anatolia was later to strike the Moroccan traveller Ibn Battuta.

VI. Art and Architecture

1. In Persia

This article will confine itself to the output of the Saldjuk period in Persia, for that was the centre of Saldjuk art and power; and while some Saldjuk rulers extended their authority far to the west, and even to the north-east at times, their hold on this territory was much more tenuous. Moreover, the visual arts in Syria and ‘Iraq between ca. 1000 and ca. 1220 followed their own path, in which local traditions played a major role. For the art of the Saldjaks in Anatolia, see section 2 below.

The importance of Saldjuk art within the broader context of Islamic art as a whole lies in the way that it established the dominant position of Persia; one may compare the pivotal role of Italy in European art. It also determined the future development of art in the Persian world for centuries. In its own time its impact was felt, either through the agency of the Saldjaks themselves or through their successor states, from Syria to the Northern India. The period 1000-1200 set benchmarks for all sorts of fields, from pottery and metalwork to the arts of the book and architecture. It is important to note that this time frame begins well before the Saldjuk period and ends well after it, a reminder that the chronology of artistic styles is often out of phase with that of political history. A by-product of this is that the overlap between Saldjuk art and that of the Buyids, Ghaznawids, Ghurids, Karakhanids and Ghurids, and its nature is unclear (e.g. although the Saldjuk sources call the ‘Emir of Khusraw’ the ‘Emir of the World’. Moreover, was at its most vigorous in the years of Saldjuk decline and after the fall of the dynasty in 1194, and it owed much to the political unity imposed by the Saldjaks on eastern and western Persia. It is to this later period that the major technical advances of Saldjuk art can be attributed. The period from ca. 1150 (the pen case of 542/1148 in the Hermitage provides a convenient point of departure) saw an unprecedented expansion of figural decoration, whether in the form of narrative scenes (taken, for example, from the Shdh-nama of Firdawsi), pictures of courtiers, animals, zodiacal themes, and images from the so-called ‘princely cycle’ featuring hunting, banquetting, music-making and the like. Long benedictory inscriptions in Arabic now become the norm in the portable arts. Sculpture in stucco, ceramic and metal now takes on a new importance.

The sheer productivity of these centuries in the visual arts [see KHAZAF and MA’ADIN represents, in comparison with the output of earlier centuries, a quantum of pottery and coarse glazed ware reminiscent of folk art, elaborately inlaid metalwork and virtually plain cast pieces. One can identify numerous local schools, for example in architecture and ceramics. A natural by-product of this intensive activity was a wide range of technical and stylistic innovations. It must be remembered, however, that the picture is skewed, especially in the fields of pottery and metalwork, by the massive scale of illegal excavations in Persia over the last hundred years, for which there is no parallel in the rest of the Islamic world. In other countries most of the comparable material is still in the ground. And the paucity of detailed monographic studies of key objects and buildings means that much basic information is still either unavailable or inadequately contextualised.

Thus the originality of Saldjuk art is apt to be exag-
gerated. In many cases, the artists of the Saldjuk period (it is misleading to speak of “the Saldjuks” in this connection) consolidated, and indeed at times perfected, forms and ideas that had long been known. In architecture one may cite the 4-iwan plan, the dome chamber over the mihrab in the mosque, and the tomb tower; in Kutânic calligraphy, the apotheosis of the “New Style” of Kufic, now integrated with lavish illumination; in metalwork, the technique of inlay using several metals; and in painting, the development of the frontispiece. Above all, there is surprisingly little for which a source right outside the Persian world can be posited. Although the Saldjuks themselves were Turks, it is hard to point to any specifically Turkish elements in the art of Persia and its eastern provinces in the period under review. This seems to point to the dominance of Persian artisans in the visual arts. Parenthetically, one may note that the picture in Anatolia, where people of Turkish extraction formed a larger proportion of the population, is distinctively different; there, references to pagan 70s, religious beliefs, funerary customs and royal ceremonial are frequently encountered (see section 2. below).

What of patronage? Only two pieces of Saldjuk pottery made for a person of high rank, one an amir, the other a vizier, are known, and the situation is little better in the case of metalwork. The overwhelmingly rich and varied production in these fields ought presumably, therefore, to be attributed to patronage exercised at a lower level of society, such as merchants, members of the learned class and professional people. Most of it was presumably made for the market, though this would not exclude its use by those of high rank. Architecture, involving as it did much larger sums of money, is a different story altogether. Inscriptions in mosques and mausolea mention the Saldjuk sultans themselves (e.g. Malik Shâh and Mohammad), viziers (Nizâm al-Mulk, Tâdji al-Mulk), Turkish chieftains (the towers of Kharrâkân), army commanders (Urmiya) and numerous amirs (Marâgha, Mîhmandust, Kazvîn and Abârbûh).

Problems of provenance have bedevilled the study of the so-called “minor arts” in the Saldjuk period. These problems have been exaggerated by the fact that most of the known material has not been scientifically excavated and lacks inscriptions yielding solid information on its production. Conjectures about the areas of production there), and this luxury ware was widely traded, to judge by the sherding carried out by A. Williamson and others. But conversely, many other slightly less luxurious but still fine wares cannot be securely associated with any one city or area, and they might therefore have been produced in several places independently (like the Samâned epigraphic ware of the 10th century, which was produced in both Samarqand and Nîshâpûr, and apparently in Merv too). The same is true of the celebrated Bobrinski bucket and the Tîfis ewer both bear an inscription indicating that they were made in Harât indicates that fine inlaid metalwork was produced in that city, and the occurrence of craftsman’s nîbas indicating Khurâsânî cities—Harât, Marw, Nîshâpûr—con-firms the important role of this province in metalwork. But it is not enough to justify the wholesale attribution to Harât of wares that merely share some of the forms. A new light body known as stone-paste or fritware was devised; it was made largely from ground quartz, with
small quantities of ground glass and fine clay, presumably an attempt by Islamic potters to imitate the body of Chinese porcelain, though the necessary evidence of trade with China is missing. Such pieces were mostly moulded. Others belonged to categories known as silhouette or double-shell wares and in these, as in lakabi and other sgraffito wares, much of the decoration was incised with a knife or a pointed object. Such incised wares continued a fashion well established before the Saldjik period. Underglaze painting in blue and black was also popular, as was painting in blue and black was also popular, as was a type of translucent white ware, often pierced for decoration. In some of these, as in lakabi and other sgraffito wares and book painting, including Saldjik ceramics—handles, stepped feet, imitation chains, incising, gilding, flaming—derive from metalwork. Similarly, the ornamental sheen and decorative motifs of Saldjik metalwork reveal close familiarity with manuscript illumination. All this points both to the interdependence of the arts in this period and to the existence of hierarchies within the visual arts.

The recent demonstration (Bloom, Blair and Wardwell, in Ars Orientalis, xxii [1992]) that the majority of textiles once thought to be Buyid or Saldjuk are in fact of modern manufacture has made it imperative to submit all so-called Saldjuk silks to scientific tests, and renders premature any art-historical enquiry into them.

It is not possible to say much about book painting in Saldjik times, for the principal centre of production in this period was 'Irak, which was then under the control of the newly reasurated caliphate [see Tawir]. Thus 'Iraki painting, for all its stylistic affinities with Saldjuk art, cannot be brought into the present discussion. The most likely candidate to represent the largely vanished art of Saldjuk book painting is the verse romance effect. Many of the most expressive wares bear inscriptions that are not a part of the painting, and signed by the painter 'Abd al-Mu'min al-Khuyi. This suggests a provenance in north-west Persia, but Anatolia is a distinct possibility too. The manuscript (in the Topkapi Sarayi library in Istanbul) has 70 brightly coloured illustrations in strip format against a plain coloured or patterned ground, with figurative types of the kind familiar in many parts of the Islamic world. Manuscript illumination. All this points both to the interdependence of the arts in this period and to the existence of hierarchies within the visual arts.

A fragment of al-Suft's treatise with figural types of the kind familiar in Islamic manuscripts is the verse romance effect. Many of the most expressive wares bear inscription bands and geometric brick patterning—known from as early as the 1020s (Dkhle, Simn). Of the two standard types of Saldjuk manuscripts, the tomb tower perhaps reached its apogee in the Gunbad-i Kabus, dated 397/1006-7 [q.v.], while the other type, the domed square, is still brought to a pitch of perfection in the so-called "Tomb of the Salmâns" in Bukhâra, datable before 943. That building also exhibits a highly developed style of brick and terracotta ornament. Similarly, such standard features of Saldjuk architecture as the trilobed squinch and the and square, respectively, are already brought to a pitch of perfection in 1069 (mausoleum of Arab-Ata, Tim). Such a phenomenon can be detected in other art forms, for example in sgraffito pottery or the continuity of the zone and decoration from pre-Saldjuk to Saldjuk metalwork; and while the quantity and range of architectural tilework is indubitably a "Saldjuk" phenomenon, its roots in Islamic monuments lie as far back as Salmânsar.

The distinctive Saldjuk contribution lies rather in the final establishment of several of the classical forms of Persia architecture and in the capacity of Saldjuk artists to draw out the utmost variety from these types. Mosques with one, two, three or four minarets are known, and the 4-minaret plan receives its classic formulation in association with an open courtyard and a monumental domed chamber; a hierarchy of size distinguished major minarets from minor ones [see mausoleum of Arab-Ata]. The same phenomenon can be detected in other art forms, for example in sgraffito pottery or the continuity of the zone and decoration from pre-Saldjuk to Saldjuk metalwork; and while the quantity and range of architectural tilework is indubitably a "Saldjuk" phenomenon, its roots in Islamic monuments lie as far back as Salmânsar.

Several fine Saldjuk Kûr'âns have survived [see knatt]. They include dated examples in Msâhid (466/1073), Tehran (485/1092 and 606-8/1209-11), Philadelphia (559/1164; produced in Hamadân) and London (582/1186), as well as examples which slightly pre-date the advent of the Saldjûks (London, 427/1036 and Dublin, 428/1037). There are also numerous undated but probably Saldjuk examples in Dublin, Paris, Istanbul, Tehran and London, to say nothing of parts of Kûr'âns or individual leaves in dozens of collections throughout the world. Saldjûk Kûr'âns are notable for their magnificent full-page or double-page miniatures, inset or detached pieces and colophon pages, often of pronounced geometric character, with script in panels taking a prime role. They are known both in naskhi and in "New Style", otherwise known as "East Persian", Küf. There is a substantial variation in scale—from small one-volume Kûr'âns measuring 12 by 10 cm to large ones of 41 by 28 cm and there are some in 30 or 60 parts, large and small, each part with its own frontispiece. The discrepancy in size and layout extends to the number of pages per line, which varies from 2 to 20, and to the size, quantity and placing of illumination. The task of establishing dates and provenances for this am ample material, and devising working categories for it, has only just begun.

In architecture even more than in other fields the division line, so far as style is concerned, between what is definably Saldjûk and what precedes that period is very hard to draw, though the Mongol invasion and the architectural vacuum that followed it means that there is a distinct break in continuity after 1220. A few examples will make this clear. The characteristic minarets of Saldjuk type—lofty, cylindrical, set on a polygonal plinth and garnished with inscription bands and geometric brick patterning—are known from as early as the 1020s (Dâmghân, Simn). Of the two standard types of Saldjuk mausoleum, the tomb tower perhaps reached its apogee in the Gunbad-i Kabûs, datable before 943. That building also exhibits a highly developed style of brick and terracotta ornament. Similarly, such standard features of Saldjuk architecture as the trilobed squinch and the and square, respectively, are already brought to a pitch of perfection in 1069 (mausoleum of Arab-Ata, Tim). Such a phenomenon can be detected in other art forms, for example in sgraffito pottery or the continuity of the zone and decoration from pre-Saldjuk to Saldjuk metalwork; and while the quantity and range of architectural tilework is indubitably a "Saldjuk" phenomenon, its roots in Islamic monuments lie as far back as Salmânsar.

The distinctive Saldjuk contribution lies rather in the final establishment of several of the classical forms of Persia architecture and in the capacity of Saldjuk artists to draw out the utmost variety from these types. Mosques with one, two, three or four minarets are known, and the 4-minaret plan receives its classic formulation in association with an open courtyard and a monumental domed chamber; a hierarchy of size distinguished major minarets from minor ones [see mausoleum of Arab-Ata]. The same phenomenon can be detected in other art forms, for example in sgraffito pottery or the continuity of the zone and decoration from pre-Saldjuk to Saldjuk metalwork; and while the quantity and range of architectural tilework is indubitably a "Saldjuk" phenomenon, its roots in Islamic monuments lie as far back as Salmânsar.
arch) whose depth, energy and rhythmic movement has as its foil the austere, low-relief articulation vouchsafed to the lower walls and to the inner dome itself. But other Saldjuk mosque types, such as the free-standing domed chamber or the arcade hall, are also known.

In mausolea (see TURĀB), the pišghāk was developed from a simple salient porch to a great screen which conferred a grandiose façade on the building behind it (Tūs, Sarakhs). The original simply formal dome of the domed square underwent other major changes too, notably in the development of a gallery zone (Sangāstan), engaged corner columns (Takistān, Hamadān), and double dome (mausoleum of Sultan Sangārj, Marw). Lofty tomb towers proliferated across northern Persia, many of them built as secular memorials for amirs and others of high rank, though some have mihrābs and therefore served at least in part a religious purpose. Their form varied: some were square, cylindrical or flanged but most had 7, 8, or 10 or 12 sides, with inner domes crowned by conical or polychedral roofs. Their form was well suited to the development of brick ornament, for it ensured a constant change of plane and therefore much variety in the play of shadow. Here, too, some of the earliest uses of glazed tilework are to be found.

The impressive sequence of some 40 Saldjuk minarets (see MANĀRA. 1) comprises all manner of structural variations, including single or double staircases with or without a central column, flaring corbelled balconies, three-tiered differences, shafts articulated with or without a central column, flaring corbellings, minarets (see MANARA. 1) comprises all manner of structural variations, including single or double staircases, with or without a central column, flaring corbelled balconies, three-tiered elevations, shafts articulated with or without a central column, flaring corbellings, double or polychedral roofs. Their form was well suited to the development of brick ornament, for it ensured a constant change of plane and therefore much variety in the play of shadow. Here, too, some of the earliest uses of glazed tilework are to be found.

Here, too, some of the earliest uses of glazed tilework are to be found.

because, with exceptions like the Great Mosque and Hospital at Divriği and the foundation of Huant (Khânedâr) Hatun at Kayseri (Şawwâl 635*/May-June 1238); cf. Akok, 1968), mosques, madrasas and baths may have been adjacent but were not integrated structures, so that substantial parts could well have disappeared without damage to the rest. Funerary foundations, with the pyramidal or conical roof of a mausoleum clearly visible from the exterior, also appear to have been less common than in Ayyûbid Syria: among the exceptions are the Citadel Mosque at Konya (656*71221-91) replacing a mosque of Maqdûl I (550*1155) which once stood near the tombs of the Sultans of Rûm (Kaykâwûs I is buried, however, in the hospital he founded at Sivas [614*1217-8]); the hospital at Divriği (626*71228-9) and the complex of Huant (Khânedâr) Hatun at Kayseri (Şawwâl 635*/May-June 1238). The mosque of the vizier Fâkhâr al-Dîn ʿAlî (656*1258; cf. Meinecke, 1976, ii, no. 79) was augmented by a şâhâne (fâkhâr) on his death which was turned into a family mausoleum. Many other monuments contain provision for a mausoleum, even if they have no burials, but they are unmarked architecturally and may well have been afterthoughts.

Mausolea. The vast majority of mausolea are isolated tomb-towers. Despite marked local variation in decoration, their construction is basically standard, a pyramidal or conical drum with a pyramidal or conical roof on a raised square podium which houses the crypt. The interior often contains a mihrâb, not necessarily because prayers were to be said there but to orient the burial. These türbes or kümbets derive from the brick tomb-towers of later-12th-century Bändigâl, as at Nağçâwân [q.v.] and Marâğha [q.v.], though they are virtually all of cut stone without any tilework. Many are anonymous but those which bear inscriptions are generally of amirs or high-born ladies. In the cemeteries of Ahtal (Gabriel and Sauvaget, 1940; Karamâzarâh, 1972) they occur alongside conventional inhumations with a cenotaph and head- and foot-stones. Another monumental tomb-type is the so-called Gûmey, Hatun Tûrbe at Konya (late 13th century; cf. Meinecke, ii, no. 86), an open iwân built over a crypt and with traces of tile decoration on the façade. Such tombs remain quite common in the Kayseri area.

Fortifications. The building or restoration of fortifications by the Sâlûdûk sultans of Konya closely follows the unification of their territories, particularly in the reigns of Kaykâwûs I and Kaykûbât I as they subjugated the smaller Turcoman amirates and expanded into Byzantine territory. These include the walls of the city and Citadel of Konya (660*1263-4; 670*1273; 697*1281; 675*1279) and 693*1284-5; Sinop (Râbi’ II 612*July 1215), Antalya (Dûmûdâ 1 617*July 1220, 622*1225-6, 626*1229-9 and 642*1244-5) and the Citadel of Kayseri (621*1224-5). The walls and Citadel of Sivas were probably restored early in the reign of Kaykûbât I, and after his capture of Erzurum in 1230 its walls also were restored. The latest of his Turcoman rivals to build or restore their walls were the Mengûdûjkûks at Divriği (inscriptions of 654*1258-64, 660*1269-70, 670*1273-4; 655*1259-60; 684*1268-9; 693*1284-5, long after they had accepted Sâlûdûk suzerainty, and indeed when they had passed under Mongol overlordship. The most imposing structures were at Konya (Bombaci, 1969), but Sarre (1936; and cf. Laborde, 1836) pointed out that they were the walls not of the city but of Kaykûbât I’s palace-citadel, hence for show rather than defence. The most
important fortifications are therefore those of Alanya (Ala'iyya [q.v.]) (623-971; cf. Rice and Seton Lloyd, 1958) with a 5-bay naval dockyard (terstane), unique among extant Islamic naval installations. A break in the curtain wall to the principal tower, the Kizil Kule, which bears the signature of an engineer Abu 'l-'Ali b. 'Abi 'l-Radhā b. al-Kattāni al-Halabi, whose name also appears on the walls of Sinop, referred to in 1215*.

Palaces. Of the pavilion (köşk) on the Citadel at Konya, a brick construction with mud-brick core, nothing survives, but a photograph of 1895 shows its upper floor complete, now over a projecting rectangular tower of a line of inner walls and with an open arch showing the remains of a tile revetment on the exterior. This bore an inscription in the name of Küçük Arslan, in Sarre's view (1936) of the fourth ruler of that name (655-63/1257-63 [q.v.]). Tile remains from the inner rooms include minātā' tiles with human figures. Excavations are still continuing at the palace of Kübâbâd (q.v.) on Lake Beyşehir and have so far recovered a number of architectural elements and a fragment of a d'homme, a mosque (633-712/1235-6), baths, a quay and a small dockyard (terstane), and a game reserve.

Khan. One of the most striking features of Anatolian Seljuk architecture is the chains of caravansarays roughly 25 km/16 miles, one day's march, apart [see khan], linking the principal cities of the Sultanate of Rum, in particular Antalya, Eğri'dir and Konya; Konya and Abyon Karahisar, Konya and Denizli; Konya, Aş Saray and Kayseri; Kayseri and Sivas; Kayseri and Malatya; and Malatya, Sivas, Amasya and Sinop. No urban khan of the Seljuk period is preserved. Though the earliest caravansarays date to the late 12th century, the capture of Antalya (1207) and the annexation of Sinop (1215) by Kaykâwûs I were essential preliminaries to developing them as chains. Their principal function was evidently to service the north-south overland trade of strategic exports such as timber and Kîpçėl slaves from the Crimea to Antalya, whence they made their way by sea to the Ayyûbid states of Syria and Egypt, and to levy transit taxes on international trade. The peak period of foundations, 1230-45, follows hard upon the completion of the fortifications of Antalya. The Sultan Han near Aş Saray (Ragadîb 626* [June] 1229) and the contemporary Sultan Han near Kayseri (Frazer, 1929) have been purposefully built as halts for Kaykâbûd I on his progress from city to city, but these, like the smaller khan, were also convenient for pilgrims on the hadjî or for inter-urban trade, and in time of war could be used for garrisons or as refuges. Inexplicably, the east-west trade was much less favoured: despite the increasingly difficult terrain, the density of distribution cast of Sivas very markedly decreases. This may explain why the Mkhargrdzeli governors of Amasya and Sinop (Rogers, 1976) built their own chain of caravansarays to tap the trade along the Araxes.

The founders of these Anatolian caravansarays included the sultans and their ladies, viziers and amîrs. Their often well-preserved state suggests, moreover, that the specimen waṣfelîyyas of Seljuk caravansarays published by Turan (1947-8) are typical and that most of them had waṣf endowments. However, the Hekim Han near Malatya (615* [1218]; Erdmann, 1961, i, no. 18) founded by an archdeacon and doctor, which bears inscriptions in Arabic, Syriac and Armenian, showing it to have been a family investment, is evidence that not all Seljuk caravansarays need have been pious foundations.

With very few exceptions, for example the Evdir Han near Antalya (datable 1213-19; Erdmann, 1961, i, no. 55) which is built round an open courtyard, the nucleus of these caravansarays was a covered hall. This was the most appropriate to the Anatolian winter climate, though fireplaces and chimneys are generally absent. To the hall, as and when permitted, a courtyard would be added, often much larger because it was cheaper to build and because the peak season of trade was the summer when shelter was less important. With the courtyard came elaborations. Sixteen out of the surviving courtyard and hall caravansarays include mausûls and some of them, like the Sultan Han near Kayseri, placed a bath too. In the two Seljuk Hâns, mausûls take the form of richly decorated kiosks raised on a four-bay substructure. The Karatay Han (courtyard 638* [1240-1]; Erdmann, 1961, i, no. 32) also includes a spring housed in a turbe-like building.

Many of these mausûls are undecorated but practically all of them, though not built as fortresses, are fortress-like in their appearance, with stout buttresses and corner-towers. Many, however, have grand entrances, both to the courtyard and to the hall; although sometimes the hall porch is the richer, the decoration of the courtyard entrances is directly related to the elaborateness of the plan and the lavishness of the apertures. After the Sultan Hans, the richest decoration is that of the Karatay Han, the two porches of which (Erdmann, 1976, ii-ii, Plates 99-113) make use of ornamental bosses, elaborate mukarnas [q.v.] systems and angular interlacing strapwork, with animal friezes on the courtyard side of the main entrance and high-relief water spouts in the form of lions.

It is unclear how the considerable labour force employed at the peak building period of caravansarays (1230-45) was organised. The plans chosen must largely have depended on the terrain, so that variation is not necessarily significant; but the marked dissimilarities in buttresses and corner towers and the apparently random approach to the vaulting of halls and their lighting argue for an absence of centralised direction. The typology of decoration, which has little to do with, for example, tilework, is also difficult to reconstruct, not least because of the large proportion of undated buildings and because, as the work of Muhammad b. Kâhwîlân al-Dimaghî on the Sultan Han near Aş Sarây shows, a skilled decorator could vary his repertory to suit his employer. Neighbouring caravansarays tend to have somewhat similar decoration, which argues for the employment of local or provincial gangs of masons. Entrance-profiles were, however, probably largely standardised and analysis of these may well produce significant results.

Bridges. There has been no comprehensive survey of the bridges of Seljuk Anatolia, but Taeschner (i, 182 ff., 236 ff.) observes that for the most part they lie on the major Roman roads and that, for example, most of the Seljuk bridges in the neighbourhood of Sivas either incorporate or replace Roman structures (cf. Gabriel, 1934, 165-7). In the Seljuk period, re fortification and the construction of chains of caravansarays made bridge-building particularly important, not least because bridges offered another convenient way of levying transit taxes. Thus many, like the bridge over the Kızıl İrmak near Kayseri on the Kirşehir road (599* [1202-3]) built by Rukn al-Din Sulaymân b. Khâlid Arslân II, are royal foundations.

Structure. With the striking exception of the Great Mosque and Hospital at Divriği (Tükel-Yavuz, 1978), the vaulting systems of which include types of domical vault, as well as groined and elaborately ribbed vaults closely paralleled in the chapter-houses,
libraries and refectories of 12th-13th century Greater Armenian monasteries, as at Hagartsin (1248) and Saghmosavank (1255) (cf. Khal’pakhcian 1955, 1971), most Anatolian Saljuk architecture is structurally simple. Plans, moreover, are often stereotyped and much use is made of open courtyards with one, two or four iwans: despite the harsh winter climate, only mosques are regularly covered.

Building materials. Brick occupies a minor place in the architecture of Saljuk Anatolia (Bakirer, i-ii, 1981) and is most characteristic of immigrant or refugee craftsmen from Dibbâl or Persia, for example, the work of Ahmad b. Abü Bakr al-Marandi on the mausoleum of Kaykâwûs I in his Hospital at Sivas (4 Shawwâl 617*/2 December 1220). Though brick continues to be employed for domes, for example the Ince Minare and Bûyük Karatatay madrasas at Konya (latter 649*/1251-2), it generally gives way to stone and the only monument substantially of brick is the Great Mosque (Arik, 1969; Meinecke, 1976, ii, no. 96) at Malatya [q.v.]. The principal building material employed is volcanic tuff, carefully squared, with a rubble core. This was also widely used in 12th-13th century Greater Armenia, but though a few decorative features and, for example, the domed crossings of some of the larger caravansarays recall Armenian prototypes, the names of clearly Armenian craftsmen rarely occur and there are few or no obviously Armenian masons’ marks. On the contrary, it is the influence of Western Georgia (Tao-Klargeti) which is apparent in the 13th century architecture of Erzurum: and where “Saljûk” parallels with Armenian compositions on the facade of the Qifte Minare and the Gok Medrese at Sivas (670*/1270-1) and the west porch of the Buyûk Karatay madrasa is not apparent and the very marked differences between them, these diverse traditions are probably executed the entrance porch of the Buyûk Karatay madrasa at Konya, where to each side of the entrance a classical sarcophagus supports an ornamentally framed fountain and serves as a base for the whole composition.

Decoration. The different traditions of stoneworking, masonry, and tile-mosaic in Anatolian Saljuk architecture (Onew, 1978) place their decoration among the richest in Islam. The contrast between this lavish decoration and the relatively simple structural forms implies, moreover, that craftsmen’s inscriptions on buildings refer not to their architects but to their decorators, either masons or tile-mosaic specialists.

The decorative repertoire, which, strikingly, makes little use of monumental inscriptions, combines, in varying degrees, elements from the traditions of Western and North Syria and the Djazira: common elements include elaborately profiled entrance porches, and surface ornament of interiors and foliate arabesques (in Ottoman Turkish appropriately termed rûmî) punctuated by carved friezes or high-relief sculpture which very often are figural (Otto-Dorn, 1978-9), including both the traditional Muslim court repertory and animals and monsters—dragons, sphinxes, harpies, griffons and two-headed eagles, many of them shown as if they were heraldic, as on tiles and woodwork too. The only comparable repertoire on carved stone is to be found in 12th-century material from Ghazna [q.v.], though its treatment is stylistically unrelated.

In south-west and central Anatolia, at Konya, Kayseri, Niğde and Antalya and the caravansarays between them, these traditions are variously described as showing a remarkable rapid assimilation shows itself also on the grandest marble facade of all, the porch of the Gok Medrese (Ank, 1969; Meinecke, 1976, ii, no. 78), but not at Kaykubâd b. Khawânî, who is very probably executed the entrance porch of the Bûyük Karatatay madrasa at the same time), signs himself as al-Dîmaghî, not al-Halâbî. Reminisences of the Aleppo porch appear on later stone buildings at Konya, notably the Ince Minare madrasa (663/1264-5; Meinecke, 1976, ii, no. 78), but not at Kaykubâd b. Khawânî’s earlier work cannot have been entirely to the sultans’ taste, for when his signature recurs, on the Sultan Han near Ak Sarây (Ragdjab 626*/June 1229), the decoration and profiling are much closer to standard central Anatolian facade compositions. This rapid assimilation shows itself also on the grandest marble facade of all, the porch of the Gök Medrese, Sivas (670*/1271-2), signed by Kâlûyân al-Kûnâwî (the nizâr doubtless referring to his specialization in marble-work; see Sivas, A. Saray (1936) and Bombaci (1969) also attribute the collection of marbles outside the Citadel gates of Konya (Laborde, 1836) to Kaykubâd I’s own personal taste.

In addition to the marble re-used and re-carved in the above monuments, marble fragments were often incorporated unchanged. This is strikingly the case with the walls of the Zazadin Han (courtyard 634*/1236-7), which include a mass of fragments from Byzantine sarcophagi, including crosses. However, they could also be treated as part of the decoration, as on the façade of the mosque of Fâhîr al-Dîn 4Ali (Şâhîb Ata) at Konya, where to each side of the entrance a classical sarcophagus supports an ornamentally framed fountain and serves as a base for the whole composition.

The decorative repertory, which, strikingly, makes little use of monumental inscriptions, combines, in varying degrees, elements from the traditions of Western and North Syria and the Djazira: common elements include elaborately profiled entrance porches, and surface ornament of interiors and foliate arabesques (in Ottoman Turkish appropriately termed rûmî) punctuated by carved friezes or high-relief sculpture which very often are figural (Otto-Dorn, 1978-9), including both the traditional Muslim court repertory and animals and monsters—dragons, sphinxes, harpies, griffons and two-headed eagles, many of them shown as if they were heraldic, as on tiles and woodwork too. The only comparable repertoire on carved stone is to be found in 12th-century material from Ghazna [q.v.], though its treatment is stylistically unrelated.

In south-west and central Anatolia, at Konya, Kayseri, Niğde and Antalya and the caravansarays between them, these traditions are variously described as showing a remarkable
between the three Konya monuments testify rather to an inherent freakishly eclectic or "Baroque" tendency in Anatolian Seljuk architectural decoration.

Possibly the most remarkable feature of Seljuk monumental façades is the reproduction of entrance porches. A regrettably unpublished photogrammetric survey of the façades of the Çifte Minare madrasa at Erzurum (post-1230; Rogers, *Kunst des Orients*, 1974) and the Gök Medrese at Sivas (670*1271-2) by Alpay Özalıev of Middle East Technical University, Ankara, has demonstrated that the latter was copied to scale. Other copies (Ogul, 1966), smaller in size, include the Eşrefoğlu Camii at Beysehir (699*1299-1300) and the Hatuniye Medrese at Karaman (783*1381-2) [see LARANDA, 2. Monuments]. The reasons for the popularity of this façade remain unknown and, apart from the Gök Medrese at Sivas which records, probably, the marble-worker involved, none bears a craftsman's name. Their repeated duplication points, anyway, to the employment of techniques described by Byzantine writers on architecture (Downey, 1948) but ill-attested elsewhere in mediaeval Islam.

Patronage. Although in the light of the foundation inscriptions extant, the overwhelming majority of Seljuk buildings appears to have been the work of individual amirs (Rogers, 1976), the sultans may well have been indirectly involved in giving grants of land (tamlik) to found the foundations. Among individuals who were notably associated with buildings, the primacy is held by the vizier Fakhr al-Din ‘Ali (Sâhib Ata), whose attested foundations include a khân at Işkâh (647*1249-50); the Taş Medrese and a masjid at Aḡ Şehir (648*1250-1), with a khânâkh there (659*1260-1); a mosque at Konya (655*1258); the Sahabiye Medrese and a salât at Kaysery (663*1266-7 and 1267) (Akok, 1967); a thermal establishment and a khân at Iğûn (666*1267); the Gök Medrese at Sivas (670*1271-2); a khânâkh at Konya attached to his mosque there (668*1269-70) and which was later transformed into a family mausoleum (682*1283-4); and the Tahir or Zühre masjid at Konya (ca. 1280).

But another high official, the Pervâne Mu‘ûn al-Dîn Sulaymân [q.v.], was almost equally active in the Pontic provinces (Kaymaz, 1970, 187-88). At Sinop he built the Alaüeddin Medrese (664*1265-6, correcting ECEA 4505), a mosque (657*1258), a madrasa at Merzifon (663*1264-5) and the Duruk Han near the confluence of the Gök Irmak and the Kızıl Irmak (664*1265-6). There is also archival evidence that he founded a hospital at Tokat in 674*1275-6. Not surprisingly, Fâhîr al-Dîn ‘Ali and Mu‘ûn al-Dîn Sulaymân were prominent among the high officials of the Anatolian Seljuk sultans to profit from the decline of the central power and establish hereditary amirs (Rogers, 1976, ii, 35-45; ii, no. 71) strongly suggests, innovation owed much to refugee craftsmen from Khurasân or even Ghurid Harât. Al-Tûsî's workshop at Konya seems to have executed tile revetments from the Citadel Mosque, ca. 1235, up to the Büyük Karatay Medrese (649*1251-2; Meinecke, 1976, ii, no. 75).

This last houses by far the most elaborate decoration of any Anatolian Seljuk monument, including large areas of cut faience mosaic and mosaics of relief-carved elements in turquoise and manganese-purple, as well as dadoes of hexagonal turquoise tiles with fired gilt decoration. The last elaborate tile mosaic decoration at Konya is in the funerary khânkât, dated 678*1280 and restored in Muhabarr 682*1283 (Meinecke, ii, no. 79 and 89), which the vizier Fâhîr al-Dîn ‘Ali (Sâhib Ata) added to his mosque (656*1258). The revival of tile-mosaic in late 13th century Il-Khânid Persia is very probably indebted to Anatolian composite craftsmen conscripted by Il-Khân Khorâsân for the works he ordered at Tabriz, Isfahan, and elsewhere at Ani [q.v.].

An even more characteristic feature of Anatolian Seljuk architectural decoration is star and cross-tiles for the dadoes of palaces at Konya, Antalya, Kubadâbât, Kaykubâdiyâ and Diyarbekir [q.v.], for the bath built at Kaysery by Huant (Khând) Hatun, the wife of Kuybây Kânî in Şawwâl 635*May-June 1238 and in the Roman theatre at Aspendos. The Kubadâbât-Huant Hatun-Aspendos group is technically varied (Oney, 1975; 1976) including underglaze-painted, lustre-painted and sgraffito tiles, with a rich repertory of human figures, animals, birds, Zodiac and planet figures and monsters, many of them, as on Seljuk stonework, displayed in quasi- or pseudo-heraldic fashion: it has not been demonstrated that any of them were either personal or dynastic heraldic emblems (Rogers, 1977-8). Stylistically many of the tiles show closer similarities to underglaze-painted wares from Rakka [q.v.] and other Ephrates potteries than to 13th century Kâğân tilework. But the lustre-painted tiles from Kubadâbât and the tiles from Kaykubâdiyâ are sui generis (cf. Aslanapa, 1965, Plates 5-8).

Stucco. The most elaborate uses of carved and moulded stucco in architectural decoration are the figurual reliefs the Seljuk palaces. They include as fine friezes, dados, lion-slaier from Konya, TIEM 2831, and animal friezes and frames for windows, niches or wall-cupboards with phoenixes in the spandrels of their broken arches from Kubadâbât, now in the Konya Museum. In Sarre's view (1909, 22) the stone window hood in the TIEM (Kühnel, 1938, Pl. 7) was mistakenly attributed to Diyarbekir and is actually from Konya (or Kubadâbât). Very similar fragments, now in the Historical Museum, Erevan, were discovered at Ani [q.v.; cf. Marr, 1934], and phoenixes also decorate spandrels on the façades of the church of Tigran Honents (1215) there. This should, however, be seen in the context of the evident taste of the Mkhargdzeli governors of the city for Anatolian Seljuk decoration (Rogers, 1976).

In religious buildings, stucco was often used as a plain white ground for faience-mosaic inlay. The râbâ‘ of the Alì Sharif mosque or al-Ablâm mosque, Ankara (minbar dated 688*1290), however, brilliantly combines carved stucco inscriptions and pilasters with ceramic mosaic inlay, foreshadowing the elaborate carved stucco of early 14th century Il-Khânid Persia.

(b) The minor arts.

Woodwork. Anatolia has always been rich in
wood, and the wood-carving of the Anatolian Saljukids, often in solid walnut, is among the finest in Islam. It was used not only for minbars and other mosque furniture, doors and sets of window-shutters, but also for cenotaphs and folding Kurn stand-ups (table) ingeniously carved from a single plank (Çulpan, 1968). Techniques included lattices of turned wood (mashrabiyya [q. v.]) and tongue-and-groove panelling of polygons and stars set in a strapwork skeleton (küdançâr), as well as imitations of this worked on solid planks. On minbars, the names of scribes or calligraphers frequently appear alongside the craftsman’s name: the latter describe themselves variously as minâr, as on the cenotaph of Djalâl al-Dîn Rûmi at Konya (5 Dîjûmân 672*/12 December 1273; cf. Meinecke, 1976, ii, no. 84: the form of the original building is unknown), banaâ, and nadidjâr. Although on the earliest of the known series of Anatolian Saljuk minbars, from the Great Mosque at Âk Sarây, bearing the names of Masu'dî I and Kilij Arslân II and datable therefore pre-550/1155, a certain Khâlid Nûghûkî al-Djâmâlî is named as minâr al-madîj ass tûl minbâr, this must record not his workmanship but the official installation of the minbar which turned the madîjîd into a Great Mosque.

Other important Saljuk wooden minbars (Oral, 1962) include those from the Citadel mosque at Konya (Râdjaq 550*/September 1155); the Great Mosque at Siirt (611*/1214); the Great Mosque (Muharram 621*/January-February 1224 [Ark, 1969] and 638*/1240-1) at Malatya [q. v.]; and those from the Arslanhan Camii and the Kızı̇l Beg Camii at Ankara (689*/1290-1 and 699*/1299-1300, respectively) the work of a nadidjâr who also built the minbar of the Great Mosque at Çorum. The finest of the series is the minbar of the Great Mosque at Divriği (638*/1240-1), the work of Ahmad b. İbrahim al-Tiflîsî and a scribe Muhammad, with mashrabiyya balustrades, grandly designed inscriptions and heavily undercut foliate arabesques. Wooden window-shutters and remains of a “Royal Box” up in the rafters (Tükêl-Yavuz, 1978), though in rather different styles, are equally sumptuous. The occurrence of nisbas among the woodworkers’ names relating to Aklhâl and Tiflis/Tbilisi may or may not be significant. Even the Divriği minbar gives way, however, to the table for the mausoleum-shrine of Djalâl al-Dîn Butân (689*/1290-1), the work of Ahmad b. İbrahim, to the table of an inscription in the name of Sandjar Shah, Atabak of Djazirat Ibn Umar [q. v.] in 1208 (The Anatolian civilisations, iii, 1983, D. 95). Dragon-knockers, in varying sizes and for other buildings include that in Berlin, Museum für Islamische Kunst I. 2242.

Other metalwork well represented from finds in Anatolia includes zoomorphic padlocks of well-known mediaeval Persian or Syrian type, brass/bronze mirrors and cast brass dishrings-weights for steelyards. Types represented by single specimens are open-work mosque-lamp from the Esrefoglu Camii at Kayseri (699*/1299-1300, respectively), with rich carving on the outside and with painting inside of compositions of two-headed eagles and lions in scrolling arabesques under yellow varnish.

Ceramics and glass. Apart from finds of fritware at the Citadel in Konya (Akok, Alâeddîn Köskû, 1968), now in the Konya Museum, possibly made by craftsmen brought in from Rakka or other Euphrates potteries, most Anatolian Saljuk pottery belongs to the late family of polychrome-painted sgraffito wares manufactured in the Eastern Mediterranean from Cyprus to the Caucasus and Transcaucasia and the Black Sea. The Anatolian material is still undifferentiated and little, if anything, is known of where it was made; but, not surprisingly, figural decoration is conspicuous and close parallels to much of it have come from Diyarbekir, and a group of cast candlesticks sparingly inlaid with silver have been attributed to Siirt (Allan, 1978). Two large 12th or 13th century drums engraved with human-headed Kufic and fine scrolls (TIEM 2832-3) were also discovered at Diyarbekir. And although the doors made by al-Djazari (Hill, 1974, 191-5) for the palace of the Artukid ruler at Diyarbekir with cast brass plates inlaid with copper and silver and knockers of confronted dragons and knobs in the form of a lion’s head have not survived, they were much imitated. Knockers of this type and brass plaques from the doors of the Ulu Cami, Gize, bear the remains of an inscription in the name of Sandjar Shah, Atabak of Djazirat Ibn Umar [q. v.] in 1208 (The Anatolian civilisations, iii, 1983, D. 95). Dragon-knockers, in varying sizes and for other buildings include that in Berlin, Museum für Islamische Kunst I. 2242.

Other metalwork well represented from finds in Anatolia includes zoomorphic padlocks of well-known mediaeval Persian or Syrian type, brass/bronze mirrors and cast brass dish-rings-weights for steelyards. Types represented by single specimens are an open-work mosque-lamp from the Esrefoglu Camii at Beyequr (Ankara, Etnografya Müzesi 7591) made in 542-72/1152-76, a ring-dish and a censer of Siirt (Allan, 1978) also worked, though many categories of object are represented by single specimens. South-eastern Anatolia and the Djazira are particularly well represented. Significant numbers of mortars with cast and engraved decoration have come from Diyarbekir, and a group of cast candlesticks sparingly inlaid with silver have been attributed to Siirt (Allan, 1978). Two large 12th or 13th century drums engraved with human-headed Kufic and fine scrolls (TIEM 2832-3) were also discovered at Diyarbekir. And although the doors made by al-Djazari (Hill, 1974, 191-5) for the palace of the Artukid ruler at Diyarbekir with cast brass plates inlaid with copper and silver and knockers of confronted dragons and knobs in the form of a lion’s head have not survived, they were much imitated. Knockers of this type and brass plaques from the doors of the Ulu Cami, Gize, bear the remains of an inscription in the name of Sandjar Shah, Atabak of Djazirat Ibn Umar [q. v.] in 1208 (The Anatolian civilisations, iii, 1983, D. 95). Dragon-knockers, in varying sizes and for other buildings include that in Berlin, Museum für Islamische Kunst I. 2242.
Figure coinage. As with their neighbours, the Turcoman dynasties of northern Syria and the Qańzıра, issues of figural types are common in the
coinage of Saldıņı fresh Anatolia. The prototypes are similarly varied (cf. Brown, 1974), Hellenistic, Roman and Byzantine, but other types bear Zebruc or planet figures, animals and monsters, some perhaps heraldic, and, in particular, the Lion and the Sun (Şırı ½ Khrılş). This device is most characteristic of the coinage of Kaykhusraw II, but the claim, follow-
ing contemporary historians, that he adopted it at the behest of his Georgian wife, Rusudan (Güncı Hatun), has not been proved. For a fuller discussion of these
questions, see below, section VIII. 2.

Textiles. A silk with double-headed eagles and dragon-headed scrolls formerly in the church of St.
Shir u Khurshid). Her heraldic, and, in particular, the Lion and the Sun
behest of his Georgian wife, Rusudan (Güncı Hatun),

There is also copious literary evidence for the wide-
spread manufacture of floor-coverings by nomads,
perhaps, however, flat-weaves, not pile carpets. It is
difficult to say what they looked like, but varied and
undoubtedly ancient fragments from the Citadel
Mosque at Konya, the Eşrefoğlu Camii at Beyşehir
(Riefstahl, 1931) and the Great Mosque at Divrıği are
often accepted to be Saldıņı in date. Both relative and
absolute chronologies are, however, lacking. No
evidence, moreover, has been found that carpets were
yet being exported to the northern Mediterranean
countries.

1. In Persia and 'Irák
The Seljüks were important patrons of Persia, and to a lesser extent, also of Arabic belles-lettres. In this article we shall begin by looking at the panegyric poetry directed towards them (it is here that the relationship between patron and client is most immediately obvious) before taking a briefer look at the narrative and didactic poetry and the literary prose that were composed under their patronage.

Generally speaking, the great majority of the keşif dedicated to the Seljuk amirs are in Persian, while the contemporary Arabic language poets more commonly direct their panegyrics to the waqfīs and other educated members of the bureaucracy; this contrasts with the situation under the Buyids, whose knowledge of Arabic and whose appreciation of Arabic poetry were evidently superior to those of the Seljuk ruling family. The earliest major literary figure in the outpourage of the Seljūks was the bilingual writer 'Ali b. al-Hasan al-Bahlârî (died 467/1075) [q. v.]). He was closely attached to Toghril's minister al-Kunduri and is best known as the author of the Dumyat al-āṣr wa-arafat al-āṣr, an anthology of contemporary Arabic poets in the manner of and in continuation of al-Thâlibî's celebrated Yatimâr al-dâ'irî. His Arabic dīwān (see O. Rescher, in RSO, iv (1911-12), 726) but unpublished, though some of the poems are known from biographical sources. A few samples of his Persian verse, among them several rubâ'îyyât, are quoted by 'Awfi (Lubāb, i, 68-71).

Lâmi'î Gurgâni [q. v.] is the author of an extant dīwān in Persian. He began his career as a panegyrist of the Ziyârîd ruler of his native Gurgân, Anûshîrîwân b. Manûchîr, but then passed into the service of the Seljûks. His dīwān contains poems in praise of al-Kunduri and Nizâm al-Mulk, as well as of the amîr Alp Arslân.

Azârî Harâwî [q. v.] flourished under two Seljûk princes (the ruler of Harât Abû 'l-Fawâris Toğhân-shâh b. Alp Arslân and his cousin Abû 'l-Mu'azzar Amîrânshâh), and has left a Persian dīwān consisting largely of poems in praise of these two men. Nîzâmî 'Arûdi (Câhâr makâla, ed. Kazwîni, London-Leiden 1910, 43-4) singles out Toğhân-shâh as a particularly generous patron of poetry and lists another half-dozen poets who served at his court, but all their works are now lost apart from stray verses.

During the early part of the reign of Malik Shâh, the young poet Mu'izzî Nayşâbûrî [q. v.] inherited from his father, Burhânî, the position of "prince of the poets" (amîr al-šâr'ân); he was, in other words, the head of the bureaucratically organised hierarchy of professional panegyrists (or in any event of those who wrote in Persian who congregated at the Seljuq court. His extensive dīwān contains odes to the amîr from Malik Shâh down to Sandjar, to their ministers and various other persons. He lived perhaps until the middle of the 6th/12th century.

Among the Arabic panegyrists of Nîzâm al-Mulk we can mention Ahmad b. 'Abd al-Razâk al-
The extensive diwān of Ahmad b. Muhammad al-Arroydānī [q. v.] contains a few poems to Muhammad b. Muhammad al Bakhtayr, Malik Shāh and his brother Mahmūd, but the majority are dedicated to the wa'izs of the Saljūqs, especially to the sons of Nizām al-Mulk.

During the long reign of Sandjār, a large number of Persian poets frequented his court; we can restrict ourselves to those whose diwāns have actually survived. After the death of the already mentioned Mu‘izzī, Sandjār’s pre-eminent panegyrist appears to have been Awhad al-Dīn Anwarī [q. v.]. According to Dīwānī (ii, 8), he accompanied the amīr when, in 542/1147, the latter laid siege to the Kūh”ārazm Shāh Atsīz in Hazārazāp and participated in the campaign by writing poems mocking the enemy, which Sandjār’s archers shot into the besieged fortress. Atsīz retaliated by doing the same with verses of his court-poet and secretary, Raḥīd al-Dīn Watwat [q. v.] (who on other occasions also wrote poems in praise of Sandjār). Anwarī survived his master and went on to serve Sulaymān b. Muhammad and others. Another poet whose services to Sandjār went beyond the purely literary was Aḥād Sābir [q. v.] whom the Saljūq ruler sent as a spy to the court of the Mutanabbi. He has also left a number of books on alchemy.

The extensive diwān of Ahmad b. Muhammad al-Arroydānī [q. v.] contains a few poems to Muhammad b. Muhammad al Bakhtayr, Malik Shāh and his brother Mahmūd, but the majority are dedicated to the wa’izs of the Saljūqs, especially to the sons of Nizām al-Mulk.

The satirical poet Suzanī Samarkandī was attached to the court of the Bawandid prince Faramarz b. Rustam, also sent by the then elderly ʿAmīr al-shu‘ārā’ to write an elegy.

The Persian panegyrists of the Saljūqs of Western Persia after the time of Sandjār include Abū ‘l-Qāsim Shīrīnī, a native of Tus who fled his homeland at the time of the Mongol invasion and made his way (via India, Aden, the Holy Cities and Baghdad) to Anatolia, where he served the Hūm Shāh Kay Kūbād I and his successors Kay Khusrūw II and Kay Kāwūs II, to whom he dedicated a Persian versification of (once again) Kalīla wa-Dīmna in 659/1260. He is presumably identical with the malik al-shu‘ārā’ ʿamīr Bāḥā’ al-Dīn Kānī’ī of whom Allākī (Manākī, 1260), the teacher of Talshīm, speaks (559-60, 221, 322) says that he visited Mawlānā Djalāl al-Dīn Rūmī during his lifetime and, again (ibid., 595), that he was among those who paid their respects at Rūmī’s grave after he died in 672/1273. This produces at least an indirect link between the Saljūqs of Rūm and Rūmī, the most famous poet who lived in their domain.

The best-known work in Persian prose emanating from the Saljūq courts is doubtless the Siyāsāt-nāma (alias Siyar al-muluk) of Malik Shāh’s minister Nizām al-Mulk. Apart from this, a number of major Persian historical works were dedicated to the Saljūq rulers; these include the Fārs-nāma of Ibn al-Balḵī [q. v. in Suppl.] (dedicated to Muhammad b. Malik Shāh), the Persian history of Anushirwān b. Kāhli [q. v.], who was wa‘zīr to Mahmūd II and Mas‘ūd (not extant, but its contents are known from the Arabic version by al-Bundarsābī, the Siyar al-muluk of Zahhār al-Dīn Naysābūrī [see Siyāsāt-nāma and its continuation, the Rūhāl al-sūdār of Rāwandī [q. v.] (dedicated to the Rūm Shāh Kay Khusrūw I). A survey of Saljūq literature would hardly be complete without at least mentioning the celebrated astronomer and amateur poet in Arabic, ʿUmar Khayyām [q. v.], who flour-
ished at the court of Malik Şāh, although his claim to a place in the history of Saldjuk belles-lettres...Turkish, stemming from northwestern Anatolia, Yunus Emre (ca. 648-720/oz. 1250-1320 [q.v.], dates from the first half of the 8th/14th century, hence after the demise of the Saldjūks.

Arabic naturally retained supreme prestige as the language of dogmatic theology, law and science, and Anatolia became, in particular, a centre for the production, transmission and copying of Hanafi fiqh texts. But Arabic was also a language used for mystical theology, as seen in the prolific works of Ibn al-ʿArabi, some of these being composed during his years in Konya and other Anatolian towns during the early 7th/13th century (see above, IV. 2); thus his mystical poetic work the Tariqān al-ashūq was completed at Kayseri, and his disciple Ṣadr al-Din Kūnawi was the author of numerous works in Arabic, including commentaries on the ʿUrān, Ḥadith and the Ninety-Nine Most Beautiful Names of God, and works in the field of theoretical Sūfism.

All of these works emanated from learned or courtly circles in Rûm, but the day-to-day language of the Turkish masses, urban as well as rural, was course Turkish. Although the Karamānidsʿ introduction of Turkish as the official language for the diwân in Konya (see above, section V. 2) was only a brief interlude, it served to demonstrate the fact that an adoption of Turkish for public purposes was now a practical possibility. However, the literary use of Turkish in the Sultanate was for long at the popular, folk-literature level. Little from this has survived. An anonymous Şehrī Şarān efendişī of unknown date was handed down by Gûlşekhri (d. after 717/1317 [q.v.]), and a Șâlsal-نة in verse and prose by a poet Sheyây ʿIsā describes the caliph ʿAlīʿs struggle with the giant Şâsal. Such works reflected the contemporary spirit of ghaza evident also in the oldest-preserved work of the class of popular epics, the Saldjūk-نة, existing in both long and short versions, and the Dânishgâh-نة on the heroic deeds of Dânishgâh Ǧâzî composed by Ibn al-ʿAlâ at the command of sultan Kay Kâwûs II.

But when it came to literature of a more elevated, artistic order, Turkish had an uphill fight to establish itself, and for long authors writing in it excused themselves for not using Persian or Arabic, Turkish being still regarded as the tongue of ignorant peasants or nomads, the Atrak-i bi-idrâk. Rûm included a few Turkish verses in his work, and from his long stay in the Saldjūk capital must have been fully conversant with the language; but his son Sultan Walad can definitely be regarded as a significant Turkish author, for there are at least 367 Turkish verses scattered through these works, couched in a simple style and probably aimed at spreading Mawlawi ideas amongst the people. A contemporary of Rûmʿs was the Şûfi poet Ahmed Fakhl of Konya, whose mystical Čârâk-نة was a forerunner of Mawlānaʿs work; though brief, it constitutes the first complete work in Anatolian Turkish. In addition to a mahlavâwi on the Yûsuf and Zulâykhâ theme, Ahmed Fakhīʿs pupil Sheyây Hamza left examples of secular, court poetry apparently written for the Turco-Mongol official classes of his time and milieu, whilst the Khârâdâ Dâhânlâi mentioned above wrote both Persian and Turkish court poetry at the very end of the Saldjūk period. Finally, it was at this time, and in the years immediately after the disappearance of the sultans, that the greatest poet in early Turkish, stemming from northwestern Anatolia, Yûnus Ėmre (ca. 648-720/oz. 1250-1320 [q.v.]) produced his moving Şûfi
poetry. With this poet's later career, we enter the age
of the beyliks, when the formation of several provincial
capitals was to provide fresh opportunities for writers
in Turkish.

VIII. Numismatics

1. In Persia and Irâk

Coins were struck by all branches of the Seljuk
dynasty, but in widely varying quality and quantity.
They were all Sunni in character, acknowledging the
Abbasid caliphate, but were content
to adapt themselves to coinage patterns previously
established by the Buyahids, Kâkuyids or Kâkwayhids and Ghaznawids [q.v.]. Their coinage thus
tends to be strongly regional in character, reflecting
the general economic conditions in each of the major
areas under their control. In order to facilitate trade,
the alloy of regional coinages tended to be similar to
the currencies of neighbouring states, such as the
Fatimid in the west and the Karâkhânids and Ghaznawids in the east. The regional nature of the coinage
was emphasised by princes and governors who
struck coins in their own name whenever they were
permitted to, or when they felt their power was great
enough to seize this privilege.

The origin of the complexity stemmed from the
Seldjuk family's sudden coming to power fresh from
lands beyond the frontiers of the Dâr al-Islâm. Their
social organisation was that of central Asian nomads
where tribal sense was strong but whose experience of
oriental monarchy, imperial bureaucracy, or even
coinage itself, was almost non-existent. The Seljûks
had very little time to adapt themselves to their sud-
den good fortune, and their history reveals that behin
d a facade of Islamic kingship lay a deeply ingrained
deficient system of administration which could not
organise and sustain a sophisticated coinage.

Toghrîl was succeeded by his nephew Alp Arslân in 455/1063 who, as governor of Harât, after his accesa-
ion, struck coins on which he acknowledged his
father Çâghri as overlord. His coinage appears to have been somewhat less abundant than Toghrîl's.

Under Alp Arslân's son and successor Malik Shâh (465/1072-92), the plentiful coinage of dinârs con-
tinued on the same pattern as before, although the use
of electrum dinârs apparently declined in the eastern
mints, as it did with the contemporary Ghaznawids.

The succession struggles among Malik Shâh's sons
were reflected in their complex coinages, but the
decline in the quality and quantity of the coins them-
teams also revealed that the economy was gradually being ruined as a result of these conflicts. Našâr al-Dîn
Mahmûd's coins are rare because of the confusions
of his brief reign in Isfâhan, 485-87/1092-4. After the
death of his father, Rûkân al-Dîn Berqâryâr first
issued coinage at Rayy, and quickly established himself in power elsewhere because he was both older
and more experienced than his brothers. After a tur-
bulent reign, Berqâryâr was succeeded in 498/1105
by Ġhiyâth al-Dîn Muhammâd. The last Great
Seljuk was Malik Shâh's youngest son, Mu'izz al-
Dîn San'âr, governor of Khorâsân from 490/1097,
who was less able to maintain a facade of Islamic
monarchy, but who was deeply involved in the fam-
ily's decline and lost his throne in 522/1122. There were also parallel
lines of Seljuk rulers in Irâk, Persia, Kirmân and
Syria (see above, III.). The ruling members of these
families normally acknowledged the overlordship of the Great Seljuks on their coins.

The conspicuous decline in the quality of the cur-
cency during the 6th/12th century was due to struc-
tural problems within the Seljuk state, which had no
central bureaucratic structure that could impose stan-
dards for the coinage and oversee its production.
The Seljuk state did not govern the territories it ruled,
but through the agency of members of his family,
their Atabegs [q.v.], amirs of his army or locally
powerful semi-independent governors, many of whom
included their names on the coins they issued after
those of the caliph and their principal overlords. The
coinage of the later Seljuks was manufactured with a level of care that made many of the pieces so carelessly manufactured
that their legends are often mis-struck, or the margins
are missing from the flan. Thus it is often impossible
to read the mint names and dates of striking. The
coine of the later Seljuks leads on to that of their
successors, such as the revived Abbasid caliphate in Baghdad, the Zangids in Mosul, the Artuksids in Hamayn and Mardin, the Ildizids in Ardabil and the Saljûqsids in Fars.

Because the Saljûqs were champions of Sunnism, the legends on their coins reproduce the traditional 'Abbasid type, which had survived intact at Nîshâpur, the great mint for gold in Khurâsân under both the Sâmânîds and the Ghaznavids. The religious legends, therefore, show little variation in their texts. The obverse field contained the first statement of the kalima, lâ ilah illâ Allâh muhammadu lâ gÎwrî khâlu. Around this were two marginal legends, the inner containing the mint and date formula and the outer inscribed with parts of vv. 4 and 5 of sûra XXX, al-Rûm. The reverse field contained the second statement of the kalima, Muhammad nasîl Allâh, and the single marginal legend was an adaptation of v. 33 of sûra IX, al-Tauhîb.

Occasionally, the Saljûqs struck dinârs which were intended to have talismanic qualities, such as an issue of Alp Arslan from Marw dated 461 which inscribed the ninety-nine beautiful names of God in the obverse and reverse fields. A more common practice was to engrave v. 255 of sûra II, al-Bakara, the Throne Verse, in minute letters in the reverse field. This calligraphic tour de force is found on occasional issues from Isfâhan, 'Askar Mûmur and Marw. On rare occasions, the engravers included their own names on their best works in tiny letters in the outer margins.

The secular legends outside the mint and date formula were limited to names and titles. The reigning caliph's name was usually placed below the kalima in the obverse field, sometimes, if space permitted, with his title Amîr al-Mu'mînîn. On his own coinage in Mardin, the caliph was entitled al-'Imâm, and his heir's name also appeared vertically in either the obverse or reverse field. The rest of the space was devoted to the name and titles of the ruler who struck the coin and those of his secular overlords, if he was obliged to acknowledge any. In order of importance these were the ism, e.g. Toghrîl Beg, kunya, Abû-Ṭâlib; labak Mu'izz al-Din, Rukn al-İslâm, 'Adud al-Dawla; and 'alâm and 'unvânas, al-Amîr al-Adîjar/Shâhângâh, al-Sultân al-'A'zam or Mu'azzâm. Unlike the Sâmânîds, the Ghaznavids and Buwayhids, whose titulature was generally uniform in the latter half of the second millennium, the Saljûqs used labaks actually conferred by the caliph, the Saljûqs were often inconsistent in their royal styles. This may have been a result of their decentralised mint system or because of their preference for the grand effect rather than strict accuracy. For example, until 438/1046-7, Toghrîl was entitled al-Amîr al-Adîjar on the coinage of Nîshâpur, and al-Adîjar in Rayy. A look at any of the catalogues where Saljûq coinages are reproduced, or the catalogues themselves, will throw some light on the relationship between the caliph and the ruler. Throughout Toghrîl's rule, the caliph al-Kâ'îm [q.v.] accorded him a full set of titles, al-Sultân al-Mu'izz zam Shâhângâh Rukn al-Dîn Toghrîl Beg, but in the brief period of uncertainty after Toghrîl's death in 455/1063, the caliph seized the opportunity to strike coinage in his own name and that of his heir for the first time in nearly a century. On the coinage of 456 and 457 the ruler is described as Shâhângâh al-'A'zam 'Adud al-Dawla Abu Shu'ayb Malîk al-'Arab wa l-'Adîjar Abî Arsâlim, while on the dinârs of 456 and later he is simply styled 'Adud al-Dawla Abî Arsâlim. From then on it became the custom to name the Saljûq ruler on the caliph's coinage with only one or two titles, usually an imperial and a throne name. The caliph al-Mu'ktadî [q.v.] termed the ruler Djâlî al-Dawla Malîk Shâh. During the succession struggle after Malîk Shâh's death in 485/1092, the caliph once again struck dinârs in his own name. This was followed by an issue where the ruler was styled Mu'izz al-Dawla al-Kâhirâ Berkyaruk. In 489/1096 the caliph al-Mustâzîrî [q.v.], altered Berkyaruk's lakab to 'Adud al-Dawla, while in 491/1098 and 493/1100 the caliph again struck dinârs in his own name, under what circumstances is not clear. The caliph entitled his successor Ghiyâth al-Dunya wa l-'Dîn Muhammâd, and then when the state was divided after Muhammâd's death in 511/1118, the caliph al-Mustârshîd [q.v.], named the senior ruler as Mu'izz al-Dunya wa l-'Dîn Sandjar and the ruler of 'Irâq wa wa-'alî 'adhâhi Muğïîh al-Dunya wa l-'Dîn Mûhammâd. Finally, the caliph al-Mu'kalî [q.v.], retained no more than the lakab of Mu'izz al-Dunya wa l-'Dîn and Ghiyâth al-Dunya wa l-'Dîn, until the inclusion of Saljûq names on the caliph's coinage was dropped altogether after the death of Ghiyâth al-Din Mustârshîd in 547/1152.

A much larger body of numismatic evidence needs to be assembled before a comprehensive and analytical study of the Saljûq coinage can be made. This is particularly true of the post-Malîk Shâh period, when the continually changing political scene is chronicled by the frequent striking of coins in the names of two rulers, rebels and usurpers, local governors and Atabegs.

2. In Anatolia

The Rum Saljûq coinage is entirely separate in origin from that of their distant cousins the Great Saljûqids (see above VIII. 1). Their earliest coin is a crudely executed copper fals struck by Rukn al-Dîn Mas'ûd I b. Kîrîl Arsâlim (510-511/1166-56), which copies a contemporary Byzantine folis with a full-face imperial bust on the obverse, and the ruler's name on the reverse.
The earliest coinage of ʿIzz al-Dīn ʿAlī Arslān II (551-88/1156-92) was similar to that of his father Masʿūd I. This was followed by the well-known design of a mounted lancer galloping to the right on the obverse, borrowed from Christian iconography where it portrayed St. George the warrior saint of Cappadocia. In 571/1175-6 ʿAlī Arslān II introduced traditional Islamic gold dinārs and silver dirhams to Anatolia, at the same time as the Ẓānī Ṣafuḥ reintroduced silver coinage to Syria. There is a unique gold dinar of 573/1177-8, while the earliest silver is dated 571/1175-6. Both bear conventional legends, with the mint and dates inscribed in the margins. In the east, Ẓānī Arslān placed the caliph's name on the obverse, and the sultan's titles on the reverse. The table which summarises the available silver coinage only mentions Kilic Arslān II's silver dirham modelsled on those of his father.

After Sulaymān's death in 600/1203, the Ẓānī Kay Kāwūs continued to use the kalimat on the obverse. The auspicious sign of the sun in Leo was replaced with the laudation “Glory belongs to God!” in the obverse field with the mint and date in the margin. In the east, Kilic' Arslān ly from the mint of Konya.

When ʿAlī Arslān II abdicated in 588/1192 he divided his realm among his numerous sons and a daughter, and apparently granted them all the right of succession. His eldest son, Ghiyāth al-Dīn Kay Ḵosraw I, who ruled in Konya, 588-93/1192-7, struck coins modelled on those of his father. The most famous Rum Saldjuk coin bearing the device of the lion and sun rests on the backs of two lions rampant with their tails interlaced.

The Ẓānī Saldjūk dirham was struck at the traditional Islamic weight standard of 2.90:3.00 grs of virtually pure silver, with the kalimat and the caliph’s name on the obverse, and the sultan’s titles, name and patronymic on the reverse. They bear the names only of the three sons of Kay Khusraw II at Kose Dagh at the end of 639/1242 (see III, 5). Surprisingly, the Ẓānī Saldjūk coinage did not mention them as overlords until much later. However, the number of dirhams struck in 640 and 641 decreased, and the lion and sun type was abandoned in 641. Kay Ḵusraw II returned to a purely epigraphic style of coinage, and assumed the grandiloquent title Zill Ālāḥ fi l-ʿĀlām, “The Shadow of God in the World”. Before the Mongol victory, he restored the now extinct epigraphic style of coinage, and assumed the title Zill Ālāḥ fi l-ʿĀlām. He introduced the Ẓānī Saldjūk practice of dating coins with diwānī abbreviations of the Arabic names for the numbers, borrowed from accounting conventions, for the units and decades of the year. Al-Malik al-Kāmil Muhammad II, the Ayyūbid ruler of Mayāfārīkīn and Amīd, also struck a few undated copper coins naming Kay Kāwūs II as overlord.

In 646 Rukn al-Dīn Kay Kāwūs II challenged his brother Kay Kāwūs II, and demonstrated his sole power in Sivas by striking the last Saldjūk horsemanship coinage. Its artistic inspiration was Persian rather than Anatolian, replacing the warrior-saint of the Byzantines with an elaborately-dressed archer, drawing his bow on the back of a prancing horse. The Il Khan Hūlegū’s anger at the rivalry between Kay Kāwūs II and Kay Ḵusraw II in 655-60/1257-60 prompted a triumvirate among the three sons of Kay Ḵusraw II, and between 647 and 656 a conjoint coinage was issued in the names of ʿĪz al-Dīn Kay Kāwūs II, Rūk al-Dīn ʿAlī Arslān IV and Alī al-Dīn Kay Ḵubābīd II. Their silver is plentiful and a few gold coins are known, but there appears to be no copper. Most were struck in Sivas and Konya, but there were also minor mints in Kayseri, Malatya and Luṭlu′a. The latter, located in the Taurus mountains, appears to have been the Ẓānī Saldjūk’s first mining mint. The one sign of disunity amongst the brothers on their coinage is a dirham of 652 struck in Kayseri which names only ʿAlī Arslān IV and Kay Kāwūs II.

When coinage started on the death of Kay Kāwūs II, ʿĪz al-Dīn Kay Kāwūs II issued coins in his own name between 655 and 658/1257-60 at several western mints, the principal one being Kayseri and others in Goldara, Develu, Gümüşhane and Lulu′a. After the fall of the Baghdad ʿAbbasids in 656/1258 Kay Kāwūs continued to use the kalimat and the caliph’s name on his coins until 658/1260, when he replaced them with the laudation al-ʿĪz al-ʿĀlī “Glory belongs to God!” in the obverse field with the mint and date in the margin. In the east, ʿAlī Arslān

All ḥakabs include the phrase al-Dunya wa'l-Dīn.
IV struck coins during his second period of rule (655-63/1257-64), still in the name of the caliph al-Musta’mim until the year 662/1264, but in 663/1265 he issued dirhams in that of a fictive caliph al-Imam al-Ma’ṣūm Amīr al-Mu’mīnīn, “the Immaculate Imam, Commander of the Faithful”. Elsewhere he replaced the kalima and mention of the caliph with the laudation al-Minna il-lāh, “Grace be to God!”.

His principal mint was Sivas, but after the death of Kay Kāwūs II in 638 his coins were struck in Erzincan, Al'AỰiya, Antalya, Bazar, Demêli, Kayseri, Gümuspazarcı, Lu‘tu‘a, Ma‘dan, Shehir, Sarus and Malatya. Kılıçe Arslan IV was succeeded by his son Qiyāh al-Dīn Kay Khusraw III (663-81/1264-82), whose coinage from Erzincan, Erzurum, Antalya, Bazar, Sivas, Sarus, Sinop, Kastamunu, Konya, Kayseri, Gümuspazarcı, Lu‘tu‘a and Ma‘dan Shehir was distinguished by the laudation al-Mukhlī l-illāh, “Sovereignty belongs to God”.

Kay Khusraw III was succeeded by his nephew 'Ala‘ al-Dīn Kay Kubādh III b. Farāmūzır in 681/1282, who lost the eastern territories to his cousin Qiyāh al-Dīn Mas‘ūd II (first reign 681-97/1282-97). The coins of Mas‘ūd II, from Erzincan, Erzurum, Antalya, Sar Kavak, Samsun, Sivas, Konya, Gümuspazarcı, Ladiķ, Lu‘tu‘a, Ma‘dan Bayburt, Ma‘dan Shehir and Ma‘dan Samastur, occasionally used the laudation al-‘Uzma il-lillāh, “Power belongs to God”.

The end of the Rūm Saldjūk coinage is obscure. Sovereignty alternated between Kay Kubādh III, Mas‘ūd II and his son Mas‘ūd III in the last decade of the seventh century and the first years of the eighth, but their crudely struck coins make it difficult to establish an accurate chronology based on numismatic evidence. Kay Kubādh III did occasionally place a lion passant or a lion and sun on his coins, some of which, struck in Erzincan, Sivas and Konya in 698, acknowledged the II Khānīd rulers Mahmūd Ghazan and as overlord. Other mints for Kay Kubādh III are Antalya, Sulaymān Shehir, Sar Kavak, and perhaps Borlu.

During the last quarter of the seventh century, most coins were struck in silver, and gold became extremely rare. The internal coherence of the state had collapsed, and local governors often used the names of the Salghur or Salur Atabegs for their own coinage. The coins of Kay Kubādh III largely disregarded the weight standard of the Islamic silver dirham, and their weight fell to 2.00-2.50 gr. Thus began the transition to the irregular, low weight Anatolian silver issued by the Beylik successors to the Rūm Saldjūk, first in the name of the II Khānīds, and later in their own names, which resulted in the introduction of the small silver skēte as the unit of account in Anatolia by the second quarter of the 8th/14th century.

Bibliography: Rūm Saldjūk coinage has been extensively published, having been a particular favourite of Ottoman and modern Turkish numismatists. The Istanbul Mint Museum, the Yapı ve Kredi Kültür Merkezi, American Numismatic Society and Tübingen University have large collections of Rūm Saldjūk coins, as do the museums whose catalogues are listed below: I. and C. A. Rankov, The first century of the Saldjuk sultanate, stikkerler katalogu, Istanbul 1971; Isma‘il Ghalib Edhem, Tekvimi-i meşkikāt-i ʿulāmāniyeye, Istanbul 1307/1889-90; G. Hennequin, Catalogue des monnaies musulmanes de la Bibliothèque Nationale, iv, Asele pré-mongole. Les Seljouqs et leurs successeurs, Paris 1985; S. Lane Poole, Catalogue of oriental coins in the British Museum, London 1875-90, iii; Ahmed Tewhid, Mürş-i Hamûyan mesâṣ-kât-i İslâmîye kataloghâr, Istanbul 1321/1903 (R. E. Darley-Boran). Saldjukids — Saldjursids, a line of Atabegs which ruled in Fārs during the second half of the 6th/12th century and for much of the 7th/13th one (543-681/1148-1282).

They were of Türkmen origin, and Mahmūd Kāshghārī considered them as a clan of the Oghūz tribe [see qızıq], giving their particular taghna (Duwān lugāt-i Türk, T Garrison tr. Atalay, i, 56, iii, 141, 414), later in the 7th and 8th century by the Saldjūkids of Fārs, and the Atabegs of Kūshīpa, Ma‘dan Shehir, and Ma‘dan Shehir, Ma‘dan Salmast, occasional citation of the Atabegs with the laudation kalima il-lillāh, “Sovereignty belongs to God!”.

The Saljuk clan played a role in the Türkmen’s overrunning of Anatolia in the late 5th/11th century. Muzaffar al-Dīn Sonkūr b. Mawūdūd took advantage of the weakening power of the Great Saldjūk sultans and in 543/1148 established himself in Fārs after the death of the province’s ruler Buz-āba (who himself may have been connected with the Saljugh clan). After Sonkūr’s death in 556/1161, he was succeeded by his brother Mu‘azzaf al-Dīn Zangī and then in 570/1175 by the latter’s son Tekēl or Dekēl, so that the hereditary rule of the Saljughids in Fārs became established, whilst at the same time they acknowledged, until 590/1194, the overlordship of the last Great Saldjūkīd. Tekēl had eliminated his rival for power, Sonkūr’s son Kuṭb al-Dīn Toghrīl, in 577/1181-2, according to the Niṣām al-tawsīrīkh of al-Baydāwī who was a contemporary in Fārs of the Saljughids of the 7th/13th century; his account is accordingly followed by Merçil, see Bib., and here), and he probably reigned until 594/1198, when his brother ‘Izz al-Dīn Sa‘d (I) b. Zangī [q.v.] came to power. (It therefore seems probable that we should eliminate Toghrīl from the list of Saljughids who actually ruled in Fārs, although he thus figures in much of the secondary literature, and in the E. F. art., as being still alive and ruling in Fārs in the later 11th and the 13th century; there are significant differences in the information of the historians on the events of these years).

Sa‘d, like his predecessors, campaigned against the local Shabānkārāt, the local Shabankara of the local Shabankara, and in the affairs of the neighbouring province of Kūrmān [q.v.], and in 600/1203-4 captured 1ṣfahān; but he came up against the growing power in Persia of the Khārāżm-Shāhs, was captured by ‘Ala‘ al-Dīn Muhammad Shāh [q.v.] in 614/1217-18 and only released on payment of the payment of the tribute formerly paid to the Saldjūks and the cession of certain districts in Fārs as ikhtā‘īs or land-grants for Khārāzmiyān commanders. The triumph of the Mongols released the Saljughids from this dependence on the Khārāżm-Shāhs but substituted another yoke. Sa‘d’s son Abū Bakr (succeeded on his father’s death, more probably in 625/1228-26 than 628/1231) was the vassal of the Great Khān Ögedei and then of the Il-Khan Hūgūl [q.v.], and was the former ruler who conferred on Abū Bakr the title of Kutlugh Khān in return for an annual tribute of 30,000 Rukni dinārs and the admission of a Mongol šāhna to his principality.

The years after Abū Bakr’s death in 658/1260 were filled with a succession of short-rulled Saljughid Atabegs: Mu‘azzaf al-Dīn Sa‘d (II), ‘Adud al-Dīn,...

Muhammad, Muzaffar al-Din Muhammad Shah, Muzaffar al-Din Salghur Shah, closing with Muzaffar al-Din Saldjuk Shah, and the historian Wasafâ [q.v.]. The poet Sa’dî [q.v.] was the panegyrist of the Atabegs, deriving his takhallus from Abû Bakr b. Sa’d (I); it was to this last that he dedicated his Bustân and to his son, the short-reigned Sa’d (II), that he dedicated the Gulistân (cf. J. Ryppa et alii; History of Iranian literature, Dordrecht 1968, 250). Coins were minted by most of the Atabegs up to and including Abîh Khatûn, with the exception possibly of the ephemeral rulers preceding her.

**SALHÎN,** also Salliin, the name of the royal palace of the Sabaean kings in their capital Mârib [q.v.]. The house of Salhîn (byun slhn; e.g. CII 373) is the building of ancient South Arabia which is most frequently mentioned in the Sabaic inscriptions of the first three centuries A.D. Its name is also attested in the forms Salhîn and Salîn in the title of the Abyssinian king Ezânâ in Ethiopian and Greek inscriptions of the fourth century A.D. from Aksum. Owing to the lack of excavations, the original site of the palace of Sallîn in the area of the ancient town of Mârib has not yet been discovered. Arab tradition enumerates Sallîn in Mârib among the most famous castles of pre-Islamic Yemen, which are praised by the Arabs in their poems and proverbs (al-Hamdânî, Sîfî, ed. Müllcr, 203, 11-15). Sallîn is the foremost of the three castles of ancient Mârib (idem, Ikîl, viii, ed. M. al-Akwâ’î al-Hiwâlî, Damascus 1979, 99, 10), and it is supposed to have been the palace of Bîksî [q.v.] (ibid., viii, 103, 2). It held the high rank of being the royal residence of the Himyarite kings (Nashwan, Shams, 50, 9), and it was an important castle in the country of Yemen, which belonged to the Tabbâsh al-Nebî or Tabba’s [q.v.], the kings of Yemen (Yûkût, Muṣ’âmî, iii, 115, 11). On the authority of Muhammad b. Khalîd, it is reported that the Sabaean kings lived in Mârib and in Sânî’â alternately, and whenever they resided in Mârib they stayed in Sallîn (al-Hamdânî, Ikîl, viii, 106, 11-13).

It is said that the palace was built by order of Bîksî, the Queen of Sheba, the daughter of al-Hadhad, and that in it her throne stood, as mentioned in Kur’an, XXVII, 23 (Nashwan, Shams, 50, 9-11); it is said as well that Solomon commanded the ǧînn to build the palace for Bîksî (al-Tha’labî, Kitâb al-anbîyā’î, Cairo 1889, 201). According to other traditions, the palace was named Tabbâsh’a [see TUBBA] gave orders to construct Sallîn (Yûkût, Muṣ’âmî, i, 535, 13), or else the demons built it for Dhu Bata’, the king of Hamdân, when he arranged the marriage of Bîksî to Solomon (ibid., iii, 115, 12), or when Dhu Bata’ himself married Bîksî at the behest of Solomon respectively (Ibn al-Athîr, i, 238, 1-2). It is said that demons had written in a Himyarite inscription in Yemen: “We built Sallîn, working on it continuously for seventy-seven years” (al-Tabarî, i, 585, 15-16; al-Hamdânî, Ikîl, vii, 104, 4-5). In other sources, the duration of the building of Sallîn is supposed to have lasted seventy years (Yûkût, Muṣ’âmî, iii, 115, 18) or eighty years respectively (ibid., i, 535, 13-14; Tâḏî al-sarîs, s.v. Sallîn). Al-Hamdânî, however, doubts whether the ǧînn could have written this for two reasons. In the first place, they say that the demons built Sallîn in seventy-seven years, but between the visit of Bîksî to Solomon and his death there were at most seven years, and after Solomon’s death the ǧînn refused to continue their work. In the second place, there is a saying of ʿAlkama b. Dhi Ḍadân, mentioning that human beings built Sallîn and not the ǧînn, when he composed: “and men built houses (henceforth) after Salhîn (has been destroyed)” (Ikîl, viii, 105, 3-9; for the variant of this verse, as it is rendered here, cf. Ibn Hisân, Sînâ, 26, 12; al-Tabarî, i, 928, 13; Yûkût, iii, 115, 17; Tâḏî al-sarîs, loc. cit.).

When the Abyssinians under their commander Aryât conquered Yemen, they destroyed Salhîn, Shumdân [q.v.] and Baynûn [q.v.], castles which...
were without equals among men (Ibn Hisham, Sira, 26, 13-14; al-Tabari, i, 928, 9-11); they were considered to be palaces of exceptional beauty and splendour, which people had never seen before (al-Tha‘labi, Kijar, 201). It seems that none of those castles were left in the Islamic period, since reportedly no traces of Salhín can be seen any more (Yākūt, iii, 115, 19).

From the no longer existent diwân of the previously-mentioned ‘Alkâma, who was a descendant of the famous Ḥimyarite noble family Dāhā Ḥzādan, belonging to the maḥsamān [q.v.], verses are quoted, in which the fate of Salhín is deplored, because the castle has been destroyed, so that now foxes bark in it, and because it has become deserted, it is as if it had never been inhabited (al-Hamdānī, Ikṭīl, viii, 103, 3-13). Yemenite nostalgia for times long passed is expressed by the verse “Inquire about Salhín and its days, the days when the kingdom belonged to Ḥimyar” (Nashwān, Qamām, 30, 12).

Faris, The antiquities of South Arabia, being a translation of the eighth book of Al-Hamdānī’s al-Ikṭīl, Princeton 1938; W.W. Müller, Ancient castles mentioned in the eighth volume of Al-Hamdānī’s Ikṭīl and evidence of them in pre-Islamic inscriptions, in Al-Hamdānī, a great Yemeni scholar. Studies on the occasion of his millennial anniversary, Šanâ’il 1986, 139-57; (W.W. MÜLLER) AL-ŠALĪB (A.) pls. sulub, sulbān, a cross, and, particularly, the object of Christian veneration. The term is used for cross-shaped marks e.g. brands on camels and designs woven into cloth, and in legal contexts for the instrument of execution.

The Ḥurād refers in six places to the act of crucifying as a punishment. Four of these are set in ancient Egypt: in sūra XII, 41. Yūsuf predicts that one of the men jailed with him will be crucified and birds will eat from his head; in VII, 124, XX, 71, and XXVI, 49, Pharaoh vows to crucify the magicians who have disobeyed him by believing in Muṣa’s God, with XX, 71, including the detail that he will use trunks of palm trees in doing this. In fact, according to Ibn ʿAbbās (al-Tabari, Taṭārīt, ad VII, 124), Pharaoh was the first to employ this means of execution.

The fifth occurrence, in V, 33, refers to crucifixion as the punishment for those who fight against God and the Prophet and spread evil in the land. This verse gave rise to the different views of legal experts concerning the execution of highway robbers: Mālik and Abū Ḥanīfā said they should be hung on a cross, tree or pole and torn apart with spears; while Ibn Ḥanbal said their bodies should be exposed on one of these after their execution [see NADD; KÂTL, ii; SALB; SARĀKIR].

This verse is also the legal basis for the penalty against those guilty of heresy, zandaka [q.v.]: the crucifixion of al-Husayn b. Manṣūr al-Halldj [q.v.] for his uninhibited ecstatic utterances is a well-documented example (L. Massignon, La passion de Ḥusayn Ibn Manṣūr al-Halldj, nouvelle édition, Paris 1975, i, 496 ff., 655 ff.).

The sixth occurrence in IV, 157, the denial that the Jews crucified Ḥisā [see Ḥisā], agrees well with the attitude to these verses that execution is reserved for the disobedient and criminal. This denial occasioned a long tradition of Muslim exegetical elucidations (see N. Robinson, Christ in Islam and Christianity, London 1991, 127-41) and may have contributed towards the lack of interest in the atonement among Muslim polemical authors.

The rejection of the cross as the symbol of Christianity is attested in a number of Ḥadīth: on the last day, Ḥisā will break the cross into pieces (al-Bukhārī, Ankhā, ii, 129; Ibn Ḥanbal, Musnad, vi, 240, 272, etc.); at the final judgement Christians, “the companions of the cross”, will be condemned to hell on their confession that they worshipped Ḥisā (al-Bukhārī, Taawīl, bāb 24); the cross is the sign of the Rūm [q.v.], the enemies of Islam (Ibn Hanbal, Musnad, iv, 91, v, 372, v, 409); the Prophet had objects bearing cross designs removed from his dwelling (al-Bukhārī, Ṣalīl, bāb 15; Ibn Ḥanbal, Musnad, vi, 52, 140, 237, etc.), and reported on the authority of ʿAbbās). Restrictions were imposed upon public display of crosses from early times. According to Abū Yūsuf the Ḥanafī lawyer, Abū ʿUbaydah Ibn al-Djarrā [q.v.], acting on the advice of the caliph ʿUmar, permitted Christians in Syria to carry their crosses in procession on one day a year, but only outside towns and away from Muslim habitations and mosques (Kitāb al-Khārij, Cairo 1973/155–7, 152, tr. E. Fagnan, Le livre de l’impôt fondé sur la loi islamique, Paris 1921, 218-19); Khālid b. al-Walid imposed the same limitation upon the Christians of Hira and neighbouring towns (ibid., 154, 158, tr. Fagnan, 222, 227).

Crosses in public places caused obvious offence. In Palestine, ʿUmar found it necessary to place crosses under protection, stipulating that in Jerusalem, Lyd-da and other towns they would not be violated (al-Tabari, i, 2405 ff.). ʿAbbās al-Mālik and other Umayyad caliphs ordered their destruction on the outside of churches (see A. Fattal, Le statut légal des non-Musulmans en pays d’Islam, Beirut 1958, 183), and, on their imitations of Byzantine coins, had the symbol of the cross on the reverse subtly altered into a pillar by removing the bar (see W.E. Kaegi, Byzantium and the early Islamic conquests, Cambridge 1992, 223-7 and Pis. 1-11 at 207-8). The ʿAbbāsīd caliph al-Mutawakkil forbade their display in processions (al-Tabari, iii, 1390). Under later caliphs, Christians continued to exercise their restricted rights on feast days except when repression prevented them (Fattal, 207 ff.). It is not surprising that crosses were the immediate targets of religious riots in Muslim cities, or that at the time of the Crusades they were erected on mosques by invading Europeans and removed by Muslims. Curiously, the Fātimid caliph al-Ḥākîm incorporated crosses into his coins, but in a way that non-Muslims would not be led to think that Christians should wear crosses as distinctive signs [see al-Ḥākîm bi-Amr Allâh and its bibl.]

Many of these prohibitions against Christians were based on the precedent of the so-called “Covenant of ʿUmar”, a formulation of the dhimmī status which though of uncertain date reflects the attitudes of early centuries (Fattal, 60 ff. discusses views concerning its origin). According to the earliest version of this document, Christians agree not to display their crosses on streets and markets frequented by Muslims (al-Turqūṣī, Sinâq al-mulâsh, Cairo 1289/1872, 135 ff.).

The cross and its significance does not feature prominently in Muslim polemical literature, which focusses rather on the two themes which challenged Muslim sensibilities, the Trinity and divinity of Jesus Christ, with no interest in doctrines of the atonement. In the early 3rd/9th century the Ṣa‘idī imām al-Ḳāsim b. ʿAbū l-Musṭafā ‘Abd Allāh explains the crucifixion briefly as a ransom to God (I. di Matteo, Confutazione contro i Cristiani dello Zaydito al-Qāsim b. ʿAbīrāhīm, in RSO, ix [1922] 317) but does not discuss it further; while later in the same century, the independently-minded Muṣṭafā Abū Ḥisā al-Warrāq [q.v.], whose refutation of Christianity is the most elaborate to survive from the early period, gives a concise description (D.
Thomas, Anti-Christian polemic in early Islam, Cambridge 1992, 68-9, 72-7), but only mentions the crucifixion incident and the ineptitudes of explanations of the Incarnation (see E. Platti (ed. and tr.), Abū Ḫādi al-Warrāq, Yahyā Ibn Alī, de l'incarnation, Louvain 1987 (CSCO, 490-1) e.g. §§ 63 ff.). Later polemicists follow Abū Ḫādi’s example and often refer to the crucifixion only in the course of questioning whether the divine nature in Christ could suffer death (e.g. al-Nasib al-Akbar [q.v.], in J. van Es, Frühe mu'tazilische Härriphrase, Beirut 1971, 83-4; al-Bakili, Kithā al-Tambil, ed. R. McCarthy, Beirut 1957, 97-8; Ibn Taymiyya, al-Daqīq al-ṣallīb is-mān baddala dīn al-Masih, Cairo 1905, iii, 42 ff.).

Two exceptions to this indifferent attitude are Abū Ḧamād b. Ahmad and Ibn Hazm [q.v.], who each attempt to show that the crucifixion need not have involved the person of Isā, and so could have happened in conformity with the understood teaching of Isā. Ibn Hazm states that the witnesses to the events of the crucifixion are not necessarily reliable (K. al-Fīsli fī 'l-mīlañ wa 'l-aḥdī la wa 'l-nāhal, Cairo [1317, i, 58 ff.], while Abū Ḧamād b. Ḫabbār employs a previously unknown account of the Passion, in which the individual crucified is not explicitly identified as Jesus, as the factual basis for his argument that Isā was not killed on the cross (K. Taḥbīt da‘ārī al-nawāwī, ed. A.-K. Uhmān, Beirut 1966, 137 ff.; see S.M. Stern, Quotations from apocryphal gospels in Abū Ḫabbār, in Journal of Theological Studies, N.S. xviii [1967], 34-57).

Attempts were made by Christians who wrote in Arabic to explain the significance of the crucifixion, but with little if any success (see M. Swanson, The Cross of Christ in the earliest Arabic Melkite apologies, in Christian Arabic apologetics during the Abbasid period, ed. J. Nielsen and K. Samir, Leiden 1994, 115-45, and the bibliography cited there). In more recent times, Christian teaching about the cross has received close attention from some Muslims, notably K. Hussein, Karya zdlima (K. Tathbit daldīl al-Maṣūm, ed. A. Guillaume, New York 1982, i, 37-51; S. Griffith, A. T. Khoury, D. Sourdel, Altenberge 1982, 121 ff.). It is practically certain that Sallḥ penetrated the Byzantine frontier from the region of Wādi Sirhān. Ptolemy in his Geography speaks of a toponym, Ṣalḥā, in northern Arabia, identifiable with the Arabic Sallḥīd name, Duġjum/Duḏjum, and one of the affluents of Wādi Sirhān is called Hidridj/Hidraj, also identifiable with another Sallḥīd figure, al-Hidrijān. Precisely where in Byzantine Orients/Bilād al-Shām they settled as foedera is not known, but it was in the southern half of it, mainly in the provinces Arabia, and in the two Palestines, Secunda and Tertia.

Within federate tribal Sallḥ, the Duḏjum (pl. of Duḏjum) were the royal house. The eponym Duḏjum/Duḏjum is attested in the Greek sources, Sozomen, as Ζωσόμους, the tribal chief who converted to Christianity after a monk cured his wife of her sterility. Most of the historical figures among the Duḏjum/Zokomids, mentioned by the genealogists, are shadowy figures with the exception of two: Dāwūd and Ziyād, both with the same patronymic, Ibn al-Habūlā. The first was the Sallḥīd king whose name is associated with Duḏjum. The second says that his involvement in Christianity and the religious life weakened his warlike spirit and he was finally killed in the Gōlān in an encounter with a tribal coalition that formed against him. The second, Ziyād, is known as the Sallḥīd figure who fought the Kinda under the leadership of their king Ḥuḍr, but was vanquished by them at the battle of Yawm al-Baradān (see below).

As the principal foederati of Byzantium in the 5th century, their main assignment was the protection of the Roman frontier facing the Arabian Peninsula from the raids of the pastoralists, the Saracens [q.v.] of the Greek and Latin sources. Legally, they were not Roman citizens but allies, whose relationship with Rome-Byzantium was governed by the foedus, the treaty. In return for their services as watchmen over the frontier, they were granted the privilege of settling on Roman territory, and received the usual subsidies, either in money or in kind. Their chiefs were called phylarchs, and the term became technical in the Byzantine military system, meaning Arab chiefs in treaty relationship to Byzantium. In addition to protecting the Roman frontier, they took part in the two Persian Wars of the reign of Theodosius II, in 421-2
and 440-2, and possibly in the Vandal War of the Emperor Leo, who in 468 dispatched an expeditionary force against the Vandals in Africa. 4 Byzantines lost the battle of Cape Bon against the Vandals, and the Sallhids probably lost heavily in that battle, which thus must have contributed to their eventual downfall in the Orient. Participation in the Persian and Vandal Wars relieves Sallhīd history of its marginality in fighting only the pastoralists of the Arabian Peninsula.

The conversion of their eponym, Duqlum/Zakomo, to Christianity set the tone of their involvement in religion, especially monastic Christianity. The one structure that is definitively associated with them is a monastery, Dayr Dāwūd, in present-day al-Turkumāniyya in northern Syria. It was built by the Sallhīd King Dāwūd, whose name, David, speaks for itself. He was nicknamed al-Lathik "the bedraggled" because he insisted on carrying water and mortar on his own back while building his monastery, as an act of penance.

More is known about their important contribution to poetry in Bilād al-Shām in the 5th century. While Epinician odes were composed in Arabic for the victories of the Arab Queen Mavia over the Byzantine Emperor Valens, the poets of these victory odes have remained anonymous. But in the case of the Sallhīds, their court poet is known by name, ʿAbd al-ʿAs, of the tribe of Iyād, who became the court poet of the Sallhīd king Dāwūd. The poet-laureate of author of Abū ʿAs makes certain that the tradition of court poetry in Bilād al-Shām started some hundreds years before it was attested for the Ghassānīds, the Arab allies of Byzantium in the 6th century. Attractive is the fact that not only did Dāwūd have a court poet but also that he had a daughter, left anonymous in the sources who, too, was a poetess. Of her poetry, one solitary verse has survived in which she laments the death of her father Dāwūd at the hands of two tribesmen. The verse is redolent of contempt for the two "wolves" who killed the king of Sallīh and the two regicides are not left anonymous: Ibn ʿAмир and Mashdja, from the tribe of Kalb and al-Namir respectively. The Sallhīds clearly remained federates of Byzantium, not left anonymous: Ibn Durayd, a collector, refused the sword of the Ghassānīd Sabīt, that finally overturned them and superseded them as the dominant foederati of Byzantium in the 6th century, and thereby hangs a tale. The Sallhīd tax-collector, Sabīt, refused the sword of the Ghassānīd Dījjah's pawn, whose family occupied the same position in Byzantium for generations. But in the latter that finally overturned them and superseded them as the dominant foederati of Byzantium in the 6th century, and thereby hangs a tale. The Sallhīd tax-collector, Sabīt, refused the sword of the Ghassānīd Dījjah's pawn, whereupon the Ghassānīd unheathed his sword and cut off Sabīt's head, a circumstance that gave rise to the saying "From Dījjah what Dījjah chooses to give you". Dījjah min Dījjah ma aṣiṣa.

Throughout this century, the Sallhīds lived in partial eclipse overtaken by the Ghassānīds, who dominated the scene of Arab-Byzantine relations. But one of their phylarchs, who had the same name as the eponym, Zargūs appears in 586 in the Byzantine army, fighting the Persians at the siege of Mārdīn, after the suspension of the Ghassānīd phylarchate for some five years in the eighties of the 6th century. The Sallhīds clearly remained federates of Byzantium, since they appear in the period of the conquest of Bilād al-Shām, fighting the Muslim Arabs with other federate tribes at Dūmat al-Dījjand and in Zīzā in Trans-Jordan. After being worsted in the southern part of Orients by the Muslim armies, they apparently moved to the north of Syria where ʿAbu ʿUbayda found them with the Tanūkh in the baḏir (military encampment) of Kinnasrin. When asked to accept Islam, they refused conversion and remained Christians.

Unlike the Tanūkh and the Ghassānīds, these foederati of the 5th century did not prosper in Islamic times, presumably because they remained staunchly Christian and, so, isolated within the new Islamic order, with the exception of one Sallīhīd, namely, Usāma b. Zayd. This scion of the old tribe served four Umayyad caliphs: al-Walīd and Sulaymān, who put him over the Ḫabdāt of Egypt, and Yazīd b. ʿAbd al-Malik and Ibrāhīm b. Dījam, his grandson, whose kālīb Usāma was.

In addition to political and social obscurity in the Muslim period, the Sallhīds were dispersed physically in various parts of the Fertile Crescent and in Egypt. They are represented in the 20th century best in Trans-Jordan, where traces of them have survived in a village called al-Salīhī, which lies some 20 km/12 miles to the northwest of Ammān, in a village called Wāḍī al-Salīhī in the valley called Wāḍī al-Salīhī. And not far from these toponyms still live the descendants of the Salīhīs.

The adjective generally meaning "righteous", "virtuous", "incorrupt", used in the science of hadīth [q.v.] criticism as a technical term indicating a transmitter who, although otherwise praised for his upright conduct, is known to have brought into circulation one or more traditions spurious to the Prophet Muḥammad. It is the contents of such traditions, as well as their underlying meaning, that characterise their recognised inventor as salīh rather than as wawdāt, i.e. "forger", or qawaddāt, "liar". Transmitters labelled salīh, or its presumably slightly denigrating dimin-

982 SALIH — SALIH
tractive, are those who are held responsible for certain traditions of an, on the whole, pleasant tenor, as long as they are harmless and do not give rise to confusion, for example because of gross exaggeration. This accusation results in the qualifier ṣāliḥ, or that of the ṣāliḥun, lit. "reliable person", is, like sadūk and ṣudāk, not to be taken at face value, for it is more often than not merely a non-committal term conveying, if anything, the ignorance of the user as to the true merits or demerits of the transmitter scrutinised. This can amply be substantiated in multi-volume ṭikāt collections, e.g. the Kitāb al-Thāqāf of Ibn Hibbān al-Busti (d. 354/965 [q.v.]), in which countless transmitters thus qualified are at the same time maghāhib, i.e. "anonymous".

Transmitters who are labelled ṣāliḥ are commonly described as overly pious through the observation of various, mostly supererogatory, ritual practices. Other, quasi-technical, terms for this class of transmitters are: nāṣik, sāhid, zāhid, and the like. Their godly behaviour, as well as the generally pleasing and edifying contents of the ṣāliḥ material transmitted by them, earns them the qualification ṣāliḥ. In the context of ṣāliḥ traditions, the label ṣāliḥ, "fabricated", "forged", can be summarised as falling under the headings of ṭaqrīb wa-ta'rīhib, "arousing desire and inspiring awe", ma'ūna, "pious harangues", and rīkāk or rākāt, "subtle, elegant, ornate sayings". These tradition rubrics are replete with descriptions of the Day of Judgement, Heaven and Hell, the rewards or punishment therein, how to attain the one by performing salutary acts and how, by eschewing crimes and sins, to attain the one attributed to Ibn Hibbān al-Busti (d. 354/965), Kitāb al-Maghrīḥin, Haydārābād 1970, i, 48-74. Furthermore, Ibn Abī Ḥātim al-Rāzī, Kitāb al-Dharr wa 'l-tā'īdīl, Haydārābād 1952, i, 37 f.; idem, Ta'dīmat al-ma'rūfa li-kitāb al-dharr wa 'l-tā'īdīl, Haydārābād 1952, 10; al-Khāṭib al-Baghdādī, Kitāb al-kifāya fi 'ilm al-risāya, Haydārābād 1357, 133-4, 138-61; Ibn Rādāj, Shārī ʿalā tirmājī, ed. Muḥāsin al-isṭihāl of Sīrāj al-Dīn ʿUmar al-Bulkīnī, by ʿAṣira ʿAbd al-Raḥmān Bīn ʿAbd al-Wahhāb, Cairo 1974, 104, 212-9; Nawawī, Ṭāḥīr, tr. W. Marçais (using the term "fraudes pieuses" for traditions of ṣāliḥun) in JA, 9, séries, xxvii (1981), 121-25; ʿUṭālal al-Dīn al-Suyūṭī, al-Nafṣ al-Sayliqī, tr. I. Ṣaqqārī, ed. ʿAbd al-Wahhāb ʿAbd al-Lāṭīf, Cairo 1966, 1, 274-90. For the contemporary Muslim view, see e.g. Nūr al-Dīn ʿIrī, Manḥāq al-ma∫alḥah fi 'ulūm al-ḥadīth, Damascus 1972, 524, 284-5; idem, Muḥāsan al-ma∫alḥahāt al-ḥadīthiyah, Damascus 1977, 55; Subbā al-Ṣāliḥī, Ulūm al-ḥadīth wa-ma∫alḥahāh, Damascus 1959, 289-90. For a survey of ṣāliḥ against the

SALIH, a prophet who, according to the Kurz an, was sent to the people Thamud [q.v.]. He is mentioned by name nine times in the Kurz an, with the fullest versions of the story being told in VII, 73-9, XI, 61-8, XXVI, 141-59, and XXVII, 45-53; nineteen additional references to Thamud by name, including extensive passages in LIV, 23-32 and XCII, 11-5, provide parallel accounts and specific details without mentioning the name Salih. The story of Salih follows the standard Kurz anic pattern of commission, mission, rejection and punishment (see kurz an. 6.d; J. Wansbrough, Quranic studies, Oxford 1977, 21-5). Sent as a "sign" and a "warning", the prophet demanded that his people turn to him and pray to God alone, from whom they had received blessings. The people rejected Salih abruptly, calling him "bewitched" (mubah), a man like themselves, one whose claim to revelation was false; they would not give up the religion of their fathers and they doubted the idea of a day of judgement. The focal point and distinctive element of the story of Salih comes in the account of the camel (naka) sent as a "sign" (zira, VII, 73, XI, 64, XXVI, 154), "test" (fana, LIV, 27) or "proof" (musiba, XVII, 59) by God. Salih told his people that the camel must be left alone to feed unmanned and drink unhindered. However, the people (or one person according to LIV, 29) hamstrung it and killed it. They then contemptuously asked Salih to bring about the punishment which he had threatened. He told them to stay in their houses for three days; then a storm broke out (L, 44, LXIX, 5), perhaps an earthquake (VII, 78), and on the following morning they lay dead in their houses.

Thamud, as a name of a historical people, is known from other sources, and thus the story of Salih is often thought to have a basis in history. The dwellings which the Thamudic people had hewn out of the rocks according to the Kurz an (VII, 74, XXVI, 149, LXXXIX, 9), the remains of which were still visible (XXIX, 38), are connected in folklore with the tombs of the time of Muhammad himself, from the root s-l-h (vowelling unknown) twice attested in Safaitic [q.v.].

In the story of Salih the camel is clearly a very rare name, not attested in e.g. Nabataean, Palmyrene or Hatran. The story of the camel came from a conclusive commission, as with many known past story types, although J.M. Rosenow, in his Kurz an translation, suggested in it a possible reminiscence of the story of the milch-camel of al-Basus [q.v.], the killing of which sparked off the famous pre-Islamic war in Arabia (The Koran, London 1909, 300-1).

The name itself Salih may well be a formation from the time of Muhammad himself, from the root r-i-h with the connotation of "to be pious, upright". Its only appearance in pre-Islamic North Arabian may be in the form S.l.h (vowelling unknown) twice attested in Safaitic [q.v.] inscriptions (F.V. Winnett and G. Lankester Harding, Inscriptions from fifty Safaitic cairns, Toronto 1978, nos. 2048, 2095; it is also found very occasionally in Sabae and Hatran), and it was clearly a very rare name, not attested in e.g. Nabataean, Palmyrene or Hatran. The story of the camel came from a conclusive commission, as with many known past story types, although J.M. Rosenow, in his Kurz an translation, suggested in it a possible reminiscence of the story of the milch-camel of al-Basus [q.v.], the killing of which sparked off the famous pre-Islamic war in Arabia (The Koran, London 1909, 300-1).

References to Salih's poetry abound in the literature, but little concrete detail is known about his life. He was a mawla of Asad or al-Azd. His father Abul-Abd al-Kudus, a famous poet of the 2nd/8th century, and one of the first victims of the official inquisition inaugurated by the Abbassid Caliph al-Mahdi, died in 167/783. In this year Bashshar b. Burd [q.v.] and Salih were accused of zandaka [q.v.] and executed.

The focal point and distinctive element of the story of Salih comes in the account of the camel (naka) sent as a "sign" (zira, VII, 73, XI, 64, XXVI, 154), "test" (fana, LIV, 27) or "proof" (musiba, XVII, 59) by God. Salih told his people that the camel must be left alone to feed unmanned and drink unhindered. However, the people (or one person according to LIV, 29) hamstrung it and killed it. They then contemptuously asked Salih to bring about the punishment which he had threatened. He told them to stay in their houses for three days; then a storm broke out (L, 44, LXIX, 5), perhaps an earthquake (VII, 78), and on the following morning they lay dead in their houses.

Thamud, as a name of a historical people, is known from other sources, and thus the story of Salih is often thought to have a basis in history. (Mohsen Zakari)

SALIH b. 'ALI b. 'ABD ALLAH b. al-'ABBĀS, 
member of the 'Abbasid family (92-152/711-69), 
who played an important part in the success of the 
'Abbasid revolution in Syria, assisting his brother 
'sAbd Allâh in the assault on Damascus and, with Abu 
'Awān 'Abd al-Malik b. Yazid al-Atakî leading the 
pursuit of the last Umayyad caliph, Murâwân b. 
Muhammad to Egypt.

He was appointed governor of Egypt on 1 Muharr am, 133/9 August 750 and remained there for a year, 
establishing 'Abbasid power. On 1 Shawābān 1, 133/4 
March 1516 he was moved to Palestine and in the same 
year sent Sa'id b. 'Abd Allâh to lead the first jārīy 
[quadir] or summer raid of 'Abbasid times against the 
Byzantines. After another short spell as governor of 
Egypt (5 Rabî' II 136/8 October/753 to 4 Ramadan 
137/2 February 755), he spent the rest of his career in 
Syria and Palestine and on the Byzantine frontier. 
He seems to have enjoyed the confidence of his great-
nephews, the caliphs al-Saffâh and al-Mansûr, and, 
after the rebellion of his brother 'Abd Allâh in 
137/754, which he shrewdly refused to support, he 
was the senior 'Abbasid in Syria. He took over most 
of the Umayyad properties in the area, including the 
famed Dâr al-Sabbâghîn at Ramla, at Aleppo and 
Salamiya, where his family were still living in al-
Balâdîrî's time. He played an important role in 
strengthening the defences of the Byzantine frontier 
with the rebuilding of Malatya, Mal'akâsh and 
al-Maṣṣîţa. He died in Syria in 152/769, but his sons al-
Fadl and 'Abd al-Malik remained powerful in Syria 
until the end of al-Rashîd's reign.

SALIH b. MIRDAS [see Mirdas, bani 'un]

SALIH b. 'ARIF, a personage mentioned for 
the first time in the 4th/10th century in the text of Ibn 
Hawkal, Sūrat al-and, as having lived 200 years before 
and having been the alleged prophet of the 
Barghawâtîs, a Berber confederation of the 
Masûma group, installed in the region of Taṣmâna, 
between Sâli and Aṣzmûr in Morocco.

Salih's father, Tarîf b. Sâma'mûn b. Ya'qûb b. 
Isâhâk, perhaps of Jewish origin, had been a 
companion of Maysara al-Masghârî, who had led a rising 
in 1227/740 in northern Morocco at the time of the 
Khâridjîne revolt; Tarîf was then recognised as the 
chief of the Taṣmâna tribe. His son Salih succeeded 
him ca. 131/748-9. According to the narrative of the 
"Great Prayer Leader", sâhib jaštâbî, Abu Salih 
Zammûr al-Barghawâtî, sent as an ambassador to 
Cordova in 352/963, whom al-Bakrî (Masûlik, mid-
5th/11th century) mentions, Salih had taken part in the 
war led by Maysara together with his father, and 
then is said to have taught his people a religious doc-
trine revealed to him and to have proclaimed himself 
a prophet. He is then said to have left for the East, in-
structing his son al-Yasâa'i/Ilïsâa', who succeeded 
in ca. 178/794-5, to keep this new religion secret. He 
himself would return in the time of his seventh suc-
cessor. According to several sources, Salih allegedly 
lived, like his son also, as a good Muslim, and it was 
his grandson, Yûnus, who proclaimed that his grand-
father was a prophet, Salih al-Mu'mînin, and to have 
proclaimed publicly the secret doctrine, with a Kur'an 
in Beirut. There are various obscurities regarding 
Salih b. Tarîf. Did he really leave for the East, or was 
it just Yûnus who took the road, as Ibn 'Uthmân b.
ibn 'Abî Hârîrî (Sunna), i) seems to assert, together with another tradition 
given by al-Bakrî? Yûnus allegedly invented, for his 
own purposes, by declaring himself a prophet, this 
new "Berber" religion suffused with Suфиr 
Khâridjîsm, by attributing it to his grandfather, who 
was supposed to have charged him with the task of 
revealing it; this latter explanation seems more 
plausible.

(Chantal de la Veronne)

SALIH b. YAHYA, Salih b. Husayn b. Khâdir 
(d. 839/1436), amîr of the Druze family of the 
Banû Búhtür whose family divided up, amongst 
brothers and cousins, the coastal region and mountain 
of the Shûf in present-day Lebanon, the area lying be-
tween Beirut and Sidôn, with its chef-lieu as the 
little town of 'Abay, from the 5th/11th century to the end 
of the 9th/15th one.

Salih b. Yahya is above all known for having writ-
ten a history of his family, published for the first time, 
published by the B.N. unicum (fonds arabe 1670), in 
the journal al-Machriq (1898-9), and then issued in book 
form at Beirut by the Imprimerie Catholique in 1902 
and 1928. A new edition, taking into account the 
critical remarks of J. Sauvaget (BEO, v-viii [1937-8], 
65-81) and respecting better the text's integralness, 
also preserving its dialectical style, has been published 
by F. Hours S.J. and Kamal Sâlih as Tarîh Baytî. 
Récits des anciens de la famille de Bûhtûr b. 'Alî, émir du 
Charb de Beyrouth, Beirut 1969 (Coll. Recherches, Dar 
el-Machreq).

Written in a distinctly unclassical language, it 
 begins with topographical and historico-archaeo-
logical aspects of the town of Beirut, and then 
 passes, for the greater part of the work, to the complete 
chronicle of members of the family, from the ancestor 
Bûhtûr (6th/12th century) up to the author's own 
time, setting forth its subject in three chronological 
divisions (tabakât), the third one revolving round 
Nâşir al-Dîn al-Husayn (d. 751/1350), the author's great-
grandfather and most remarkable of the amîrs of the 
Charb.

The work's considerable interest lies in the fact 
that it is one of the rare documents which allow us to 
come to some conclusion about the daily life of a small rural 
fiefdom, administratively attached to Damas, or 
even to Byzantium and Mamlûk times. It gives, by means of personalised 
accounts and archival documents, a very lively idea of 
the life of the peoples living to the south of Beirut 
and their relations with the Mamlûk occupiers.

The Druze historian Ḥamza b. Ahmad b. "Umâr b.

SALIH b. 'ABD AL-KUDDUS — SALIH b. YAHYA
Salih, called Ibn Asbāt al-Qarba (d. 926/1520) made use of Salih b. Yahya's text in his Ta'rikh, and this was in turn made use of by the amir Haydar al-Shahabi (d. 1250/1835) in his al-Qawar al-haidi fi ta'rikh hawalid al-salih, ed. Na'im Mughabhagb, Cairo 1900.

Bibliography: Given in the article, to which should be added Brockelmann, II, 36 and II, 47, and Ziriki, A'dam, II, 276, iii, 198.

(L. Pouzet)

Al-Malik al-Salih, the regnal title of four Mamluk sultans:

2. Al-Salih Ismail, son of al-Nasir Muhammad b. Kalawun [q.v.], was raised to the sultanate by his father's senior amirs on 22 Muharram 740/20 July 1341. In the name of the Kalawun sultan. Al-Salih Ismail's rule was upheld first by Arghun al-`Ala'i, his step-father, and Aksunkur al-Sallari, who held the offices of nizam and mamluk al-salama respectively. With Aksunkur's subsequent elimination, Arghun al-`Ala'i held the reins of power while al-Hadjadi Ali Malik became na`ib al-salama. As the Kalawun sultan's rule was nominal only, the amirs never cut off, and even encouraged their connections with the harem which al-Nasir Muhammad had left behind. Before long, the influence the harem exerted was enormous. During Isma'il's reign e.g. the involvement in government affairs of harem women and servants increased to such extent that taka'it and land allowances could be obtained only through them. Owing to the influence of the chief eunuch, 'Anbar al-Sakharti, who had been Isma'il's tutor, servants and eunuchs attained a status of such importance that they freely appropriated Mamluk ways, while Al-Sakharti surrounded himself with the ceremonial usually reserved for senior amirs. Servants and eunuchs, moreover, were involved in an abortive attempt in 744/1343 of a group of amirs to re-install Ahmad in the sultanate. For all his piety and modesty, Isma'il soon indulged himself in the pleasures of the harem and married Ittifsak, a slave-girl singer, lavishing on her expensive gifts from the royal treasuries. Soon the sultan's household expenditures (hakimiyat al-`ahd) exceeded his father's already exorbitant practices. Even when in 745/1345 the sultanate was beset by a deep economic crisis (an annual budget deficit standing at 30 million dirhams with revenues at only 15 million dirhams), mere cosmetic measures were taken to diminish expenditure.

A particularly heavy burden on the treasury during Isma'il's rule were the costly campaigns of the ruling amirs against Ahmad, still entrenched at al-Karak — after seven abortive campaigns they were forced to borrow money from merchants to finance a final attempt. Even then the city fell only when the Bedouin who had sided with Ahmad deserted him for the reward of taka'it and lands. Ahmad was subsequently executed (745/1344). Taking advantage of the government's obvious weakness, the Bedouin both in Egypt and Syria revolted. The rivalry between the Al-Muhannan and the Al Faḍl over the leadership of the Bedouin in Syria on behalf of the government, imrat al-`arab, erupted into open conflict. Other tribes in Syria, al-`alaj, soon took the law into their own hands. Intermittent warfare between the Bedouin tribes of Lower and Upper Egypt disrupted travel on the roads, damaged the irrigation system and prevented officials from levying taxes in their districts; expeditions despatched to subdue the Bedouin proved inadequate.

To this chaotic situation, the market reacted with increasing inflation and sharp monetary devaluation. Some relief came when in 745/1345 al-Salih Isma'il granted the Venetian commercial concessions. Thereafter, Europeans were increasingly offered such commercial concessions as the revenues for the government from taxation on foreign trade offset the dwindling revenues from agriculture and local commerce. That commercial ties between the Mamluk sultanate and Europe could be renewed stemmed from changes outside the sultanate. The Papal trade embargo against the sultanate which had been in force since the fall of Acre in 690/1291 was revoked because of pressure exerted by the European trading powers, who wanted to shift their trade back to the Levant after political changes hampered trade in the Black Sea region. After only a short reign, al-Salih Isma'il died in Rabii' I 746/July 1345, from illness. Anxious to remain in power, Arghun al-`Ala'i, through a will Ismail made under his guidance, guaranteed the succession of Sha`ban [q.v.], Isma'il's brother.

2. Al-Salih Salih, lived 738-61/1337-60) was the son of al-Nasir Muhammad b. Kalawun [q.v.] by Kutulumalik, the daughter of the amir Tankiz al-Husami, al-Nasir's nabi in Syria. Al-Salih was installed on the throne on 28 Djamada II 752/2 August 1351 after the senior amirs of his father's Mamluk household who held power at the time had deposed his brother al-Nasir Hasan [q.v.]. Four days later, an open power struggle broke out between them and a triumvirate, of Amirs Shaykhun (or Shaykhun), Sarghatmush and Taz, came out victorious. Wanting to avoid concentration of power in one hand, the three carefully shared control over the treasury from that over the army. Thus Shaykhun held the sultan's treasury (al-`arib) while Sarghatmush was responsible for the distribution of takis and the Mamluk's promotion in the army. Suspicions, however, simmered and in Rabii' I 753/May-June 1352 Taz accused Sarghatmush of attempting to restore al-Nasir Hasan. Later in Radjab/October, disgruntled erstwhile associates such as Baybughra Urus, the nabi of Hamat, his brother Mandjak al-Yusufi and others, led an abortive coup in Syria. The rebels, together with Turkman and Bedouin tribes, looted Damascus and its suburbs before the Mamluk army, nominated by al-Salih Salih, defeated them. When Shaykhun and Sarghatmush learned that Taz was plotting against them with al-Salih Salih, they did away with him, and on 2 Shawwāl 755/20 October 1354, deposed al-Salih Salih and restored al-Nasir Hasan to the throne.

With the ruling amirs preoccupied with power
struggles, the Bedouin who had been under the patronage of al-Nasir Muhammad and had accumulated power during his rule and after his death, took the law into their own hands. Intermingled wars by brigands and Al Fadl over the thank al-Sarab again rendered highways in Syria unsafe, compelling the government in 753/1352 to award the inmar to both of them jointly. As in 752/1351, Upper Egypt was under the de facto control of Muhammad b. Wajil al-Ahdab, chief of the ʿArak tribe. Attacks on the Bedouin throughout Egypt in 754/1353 ended a period of some fifteen years during which the country's resources had been exhausted by the further destruction which the Bedouin wrought on commerce and agriculture and by the enormous government expenditure on efforts to contain them.

It was during al-Salih Salih's reign that the impact on the sultanate's economy of the Black Death, which had ravaged Egypt during 748-50/1347-9, became most obvious. The Mamluk army was decimated, and ʿaḏka soldiers who had survived the epidemic were reduced to such miserable conditions that they resorted to leasing their āḏka to civilians, which in turn led to the further decline of the army. Shortage in manpower caused large parts of the cultivated lands in Egypt to lie waste sharply reducing the treasury's revenues from agriculture. The state's deficit now reached such proportions that no one could be found willing to take responsibility for the treasury. Even the vizierate was an office no longer much desired. In order to reduce the deficit, the salaries of almost all officials in the sultan's household and governmental administration were cut down by half or two-thirds. The ruling amīrs further increased revenues by compelling the population to purchase products which the government owned or manufactured (tarh) or through the confiscation of property (muṣādara [q.v.], notably of rich officials. In 755/1354 new attacks against Coptic scribes enveloped throughout Egypt. Yielding to the rioting mob's demands, al-Salih Salih allowed them to destroy churches, while 25,000 ʿaddān of land belonging to the church as āʿawfā were confiscated and redistributed mainly as īktaʾūt to Mamluks. Under pressure from the ʿulamāʾ and the masses, al-Salih Salih re-enacted the discriminating laws against the dhimmis [q.v.] and decreed that no dhimmī could be employed anywhere in Egypt. With their church's source of revenues destroyed and the way for personal advancement blocked, the Copts reacted with massive waves of conversion to Islam, thereby hastening Egypt's religious transformation.

3. AL-SALIH SALAH AL-DIN HADJDJI, son of al-Ashraf Shaʾbān [q.v.] and great-grandson of al-Nasir Muhammad b. Kālāwūn [q.v.], was placed on the throne at the age of ten, on 24 Safar 783/21 May 1381, after the death of his brother, al-Mansūr ʿAli. Since Rabīʿ I 782/June 1380, the amir Barkūk al-Uṯmānī al-Yalbughāʾī [q.v.] had become āḏka al-ʿawfi [q.v.], gaining the title āḏka, and was sultan in all but name. Barkūk used his position to his advantage and bought large numbers of Mamluks whom he lodged in Cairo's Citadel. Not having to rely on an alliance of amīrs, he freely bestowed āḏka rates on an alliance of amīrs, and appointed trusted followers to key positions in government. Barkūk's rule won such wide support that he became the first amir kābir to mint coins bearing his emblem, rank [q.v.], as sultans customarily did on their ascent to power. With his supremacy fixed, Barkūk moved to bring Kalāwūn rule to an end, and, on 19 Ramadān 784/27 November 1382, deposed al-Salih Ḥādjiḏji, a date conventionally considered as the beginning of the Circassian Mamluk sultanate.

Symptoms of the decline of the Mamluk economy, evident as early as the 1340s, were common during al-Salih Ḥādjiḏji's brief reign. Decline in revenues pushed the government to issue new copper coins of heavy weight and rate to replace the silver dirham further weakened the economy.

Ḥādjiḏji was briefly restored to the throne when in 6 Dijmādā II 791/2 June 1389 Barkūk's rivals, the amīrs Timurbughāʾī al-Afdālī, called Mintāṭ, and Yalbughāʾī al-Nasīrī, led a revolt against him and succeeded in temporarily exiling him from Egypt. According to one version, Ḥādjiḏji was again put on the throne simply because he had been overthrown by Barkūk. Ascending a second time, he took the regnal title of al-Malik al-Manṣūr (Ibn al-Fūrat, ib., 94); but as with most Kalāwūn princes, Ḥādjiḏji was sultan in name only and his authority was severely restricted. On 16 Shaʿbān/10 August civil strife broke out between the two partners of the coalition behind Ḥādjiḏji's rule. Mintāṭ came out the winner, and as amir kābir he became the real holder of power. Despite Mintāṭ's claim that with his struggle against Yalbughāʾī he had, among other things, aimed at re-introducing independent sultanic rule, al-Manṣūr Ḥādjiḏji was again put under harsh restrictions. His nominal reign came to an end when opposition to Mintāṭ's ruling faction lent its support to Barkūk and thus enabled him to re-enter Cairo triumphantly on 14 Safar 792/1 February 1390. Once again removed to confinement in the Citadel, al-Manṣūr Ḥādjiḏji spent the last 22 years of his life in the harem. He died on 19 Shāwwal 814/4 February 1412.

4. AL-SALIH NASIR AL-DIN MUHAMMAD b. AL-ZAHIR TATAR was the ten-year-old son and ephemeral successor in 824/1421 of Sayf al-Dīn Tatar, but was himself replaced by al-Malik al-ʿAṣraf Barsbay [q.v.] after a five-months' reign.

AL-MALIK AL-SALIH ʿIMĀD AL-DIN ISMĀʿIL b. al-Malik al-ʿĀdil, an ʿAyyūbīd prince, who was twice sultan of Damascus for short periods. One of the many sons of al-ʿAdil Abū Bakr [q.v.], he was probably born just before ca. 600/1203-4, although no precise date has been recorded. His father assigned him Bosra and al-Sawād (the area east of Lake Tiberias) as an āḏka. He continued to hold these lands under his brother al-Muʿazzam ʿĪsā [q.v.], although in 622/1225 he was brought to Damascus, temporarily under a cloud, because of his possible involvement in a plot by a local magnate, Ibn al-Kaʾkī, to give him control of the city. After al-Muʿazzam's
death in 624/1227 he maintained his position subject to al-Nāṣir Dāwūd [q.v.]. When Ismāʿīl's brothers al-Kāmil [q.v.] and al-Āshraf Mūsā had, jointly deprived of al-Nāṣir of Damascus, Ismāʿīl was confirmed in his area of control in Ṛaddjād 626/May-June 1229. With other Ayyūbid princes, Ismāʿīl was in this same year sent by al-Kāmil to recover Ḥamā for al-Muẓaffar Ḍāhīmūd, and he commanded the ṣarkār of Damaskus which gained Baalbek for al-Āshraf. Siḥṭ Ibn al-Ḍqawṣ [see Ibn al-Ḍqawṣ, ... sīr] mentions Ismāʿīl as lieutenant of al-Āshraf Mūsā in Damaskus in Ṛaddjād 627/July-August 1231, and he took part in al-Kāmil's campaign against the Ṣalduḳs of Rum in 631/1234-4.

In Muharram 635/September 1237 he became ruler of Damaskus after the death of al-Āshraf Mūsā, who had no sons and had designated Ismāʿīl as his successor. He also took over Baalbek, and was recognised as suzerain by al-Mudḥijād Shīrūk of Ḥimṣ and by the ruler in Aleppo. In Dīmārāḍa 635/February 1238 Ismāʿīl surrendered Damaskus to the greater power of al-Kāmil, but was allowed to retain Baalbek, which gained Baalbek for al-Āshraf. Sibt Ibn al-Ḍqawṣ mentions Ismāʿīl as his successor.

AL-SALIH NADJM AL-DIN AYYUB — AL-SALIHIYYA

They entered the city on 26 Safar 637/27 September 1239 and imprisoned Ayyub’s son, al-Mughith. Deserted by most of his troops, Ayyub was taken to al-Karak by al-Nasir Dawud, already dissatisfied with his alliance with al-Adîl, and held there for six months (from Rabi’ I to Ramadan 637/October 1239-April 1240). Although both al-Adîl and Isma’il demanded the person of Ayyub, al-Nasir released him on the basis of promises that Ayyub later claimed were forced, and they planned joint action. As both al-Adîl and Isma’il moved to crush Ayyub between them, in Dhu ‘l-Ka‘da 637/23 June 1240 al-Adîl was deposed at Bilbays by his emirs who then invited Ayyub to become sultan in Egypt.

Ayyub entered the Cairo citadel on Sunday 25 Dhu ‘l-Ka‘da 637/17 June 1240. Material for the inner affairs of Egypt in this period is exceedingly sparse and little is known about his government. For the next few years, he strengthened his position by purging the Egyptian army, increasing and promoting his own service, and forthrightly rewarding himself and the so-called Bahriyya [q.v.] on the island of Rawda [q.v.] (work began Shab‘an 638/February 1241).

A general Ayyubid settlement, again at the expense of al-Nasir, was all but concluded in 641/1243. Isma’il in Damascus recognised Ayyub as suzerain (in Rabi’ I/September), and was to release al-Mughith. Umar. However, intercepted letters to Ayyub’s Khârâz-mian allies and general lack of trust once more brought about a collapse. Al-Mughith died in prison (Rabi’ I 642/August 1244) and Isma’il was suspected of his murder. Ayyub was subsequently faced by an alliance of Syrian princes and Franks, the latter recruited by significant concessions of land. In response Ayyub’s troops, joined by the Khârâzmiyya, inflicted a major defeat on the Syrian coalition at the village of La Forbie or Farbiya (Yakut, iii, s.v.) between Ascalon and Gaza (12 Dzúmâda I 642/17 October 1244). Damascus was besieged, and surrendered in Dzúmâda I 643/October 1245. To Ayyub’s fury in Egypt, the terms made allowed Isma’il his other possessions, but he then joined the Khârâzmiyya, who had changed sides, to attack Damascus. However, the power of the Khârâzmiyya was broken in Mu‘azzam 644/May 1246 by the armies of Ayyub and his son, al-Mughith, the former forming to curtail their depredations. Ayyub’s forces then took the rest of Isma’il’s lands, and Ayyub himself, now at the peak of his power, came to Damascus in Dhu ‘l-Ka‘da 644/March 1247 to organise his new possessions. Isma’il had taken refuge with al-Nasir Yusuf [q.v.] at Aleppo.

During 645-6/1247-9 there were gains from the Franks (Ascalon and Tiberias), arrests of former associates of Isma’il, including the lord of Salâkh ‘izz al-Dîn Aybak, and anxieties about Aleppo’s intentions. In 646/1248 al-Nasir Yusuf took Hims, but caliphal envoys, as ever worried by the Mongol threat, made a peace and both sides retired. Ayyub’s last success was to acquire al-Karak and the remnants of al-Nasir Dawud’s principality in Dzúmâda II 647/September 1248. In Muharram 647/1249 Ayyub had returned to Egypt, carried in a litter as he was ill, and troubled by news of the crusade of Louis IX. After the early loss of Damietta (Safar/June), a total collapse threatened to follow Ayyub’s death at the age of 49.

This took place in camp at al-Mansûra on the eve of Sunday, 14 Shab‘an 647/21 November 1249. Shadjar al-Durr [q.v.] and the senior amîn tried to conceal his death and managed affairs while summoning Tûrân-shâh, for whom Ayyub had written his political testament (see Cl. Cahen and I. Chabbouh, Le testament d’al-Malik al-Salih Ayyûb, in Actes d’Oran 2, 97-114). The nature of Ayyub’s fatal complaint has been discussed by F. Klein-Franke (What was the fatal disease of Al-Malik al-Salih ... , in Studies in Islamic history and civilization in honour of Professor David Ayalon, ed. M. Sharon, Jerusalem 1986, 153-7).

Ibn WâsÎl [q.v.] gives a penetrating pen-portrait, stressing Ayyub’s mixture of forbidding authority and diffident and introspective solitariness. He was taciturn and sparing talker. Unlike his father, he had no special taste for reading and scholarship. Even his hours of relaxation with his few special companions, in his magâlih al-shârîb, were sombre and undemonstrative.

Building was a passion. In addition to the residence on Rawda Island, he built palaces on the Nile bank at al-Lûk, the pavilions known as Manâzîr al-Kalîh (see M.G. Sarton, Études sur la topographie du Caire, in MIFAO, Cairo 1902, vii/2, 77-95), and the new town development, called after him al-Salîhiyya. Very important was the madrasa which he founded in Bayl al-Kasrayn for the four orthodox mudhâhbih. Site clearing started in Dhu ‘l-Hijja 639/June 1240 and teaching began in 641/1243-4 (al-Maârifî, Kajîlît, iii, 374). His mausoleum near the madrasa, to which his corpse was rendered in Ijâmada I 643/October 1245. To许久, the name of various places in the Middle East. These include:

1. A settlement of Diyar Muşar in al-Djayzra, placed by Yâkût in the district of al-Ruha and Edessa and said to have been laid out by the Abbasîd governor of Syria ʿAbd al-Malik b. Sâlih. He also quotes a (now lost) history of Mawṣîl by the Khârâzmiyya, and states that the caliph al-Mahdi began the work of fortification there.

2. A settlement to the north of the old city of Damascus, on the slopes of Mount Kâsiyûn [q.v.]. Yâkût describes it as a large village with markets and
a Friday mosque, containing many saints' tombs and residences of holy men. Most of the inhabitants were immigrants from Jerusalem and were Ḥanbalī in madhhab. From the 6th/12th century, it became one of the strongholds of this school [see ḤANABIYYA, at III, 161]. It is now a well-to-do suburb of the modern conurbation of Damascus.

**ṢALĪHIYYA,** a Sūfī ṭarīqa [q.v.] from within the tradition established by the Moroccan Sūfī and teacher Ahmad b. ʿĪdrīs (d. 1837). The exact origin and, indeed, the reason for the name of the Ṣalīhiyya is unclear. It appears to be an offshoot of the Raḥšādiyya, the name given to ʿārifa founded by the Sudanese ʿĪbrāhīm al-Raḥšād al-Dūwayhī (d. 1874, [q.v. in Suppl.], a student of Ibn ʿĪdrīs. After his death in Mecca, ʿĪbrāhīm al-Raḥšādīs ʿārifa was taken over by his nephew Shaykh b. Muḥammad b. ʿAlī (d. 1919), who moved there from the Sudan. Some time in about 1887, the Meccan-based branch became known as the Ṣalīhiyya, while the Sudanese branch continued to be known as the Raḥšādiyya. It is, in fact, very difficult to disentangle the various Sūfī traditions associated with the Raḥšādiyya, Ṣalīhiyya, ʿIrāqūndiyya and Dāndarāwīyya [q.v. in Suppl.]. The Shaykh was succeeded as head of the order by his three sons in turn, al-Raḥšād, ʿĀbd al-Ḥamīd and ʿĪbrāhīm, the last of whom died in 1976. The Ṣalīhiyya was taken to Somalia and other regions of eastern Africa by pilgrims from the region who were initiated by the Shaykh or his sons in the Hijāz. Communities (Somali, ʿāmara'a), dedicated to prayer and agriculture, were established throughout Somalia; by the 1930s, Cerulli estimated that there were 53 Ṣalīhiyya ʿamara'a there. These communities attracted ex-slaves or other marginal groups and opened up hitherto unutilised land.

The most famous Ṣalīhiyya leader in Somalia, and his people's greatest poet, was Muḥammad b. ʿAbd Allāh (Somali, Ṣalīmid Abdi) Ḥassān (1864-1920). He was born in Istanbul in 1864. The following year he returned to Somalia and thereafter worked to spread the order, attacking the use of tobacco and the prevalence of saint-worship among his fellow countrymen. Four years later, in 1899, he began his ḥijāh against imperialist encroachment.

**ṢAṽAMI,** nom-de-plume (makhṭāṣ) of Mirzā-žāde Muhemed Emīn (1099-1150/1688-1743), an Ottoman author of a published biography of poets, a šaykh and, in his later years, a scholar of mysticism, a dictionary and an Ottoman translation of a Persian history, all of which are in manuscript form. Many of the details concerning his life are to be found in an autobiography included in his *Taḥrīr-yi ʿūšāra,* which is the work that qualifies him for inclusion in this encyclopaedia.

The seventh child of Shaykh al-ʿĪlām Mirzā Muḥajīf Efendī, ʿṢālim was born in Istanbul in Ḥijrīyya II 1099/June 1688. His father's professional pursuits became his own: he had a career in the šīʿīyya class in which the highest rank he reached was that of kādī ʿasker of Rumeli. There is some disagreement on the date of his death. While all sources that mention it cite the month of Muḥarrar, some give the year as 1152/1739 and others as 1156/1743. The place where it occurred is also debated; it could have been either in Istanbul where he was buried near his father, or in the town of Maḥmūdīyya, near to Rumeli, *Taḥrīr-yi ʿūšāra,* ms. Miller Kütüphanesi: Ali Emiri, Tarīḥ, no. 762, fol. 135; Thureyya, iii, 3; Mustakîmzade, 454).

In his autobiography (*Taḥrīr-yi Ṣālim,* ms., B.L. Or. 7068, fols. 95a-97a; ibid., ed. Ahmed Djewdet, 337-44), ʿṢālim provides rather detailed information about his own life, education and career up to the year

---

The 73 into which, according to a hadīth, the umma or community will be divided (see H. Laoust, *La profession de foi de Ibn Baṭṭa,* Damascus 1958, 17 n.). This hadīth is to be set by the side of Kur'ān, LXXII, 11, 11, “And that some of us are upright, and some of us not so; we have become [groups following] diverse ways”.

**Bibliography:** Given in the article. (S. ORY)

**ṢĀLĪM** (A.), intact, sound, i.e. free of damage or blemish, thus “well” as opposed to “ill,” and therefore a synonym of ṣakhī. The word is used as a technical term in various fields: 1. Applied to money, some so-called unclipped coins of full weight, or a sum of money free from charges and deductions. 2. In grammar, it denotes two things: in ṣarf (morphology) a “sound” root, i.e., one in which none of the radicals is a “weak” letter (harf ʿafīf, see ṣURD), nor a hamza, nor a geminate; in nābū (syntax) a word with a “sound” ending, no matter whether the preceding radicals are weak or not. Thus the root ʿir-r-i is ṣālim, while the root ʿal-ḥ-i is not, both for the ṣarfīyya and the nābū. However, ṣālim is only for the nābū, whereas ṣanākā is only for the ṣarfīyya, the latter because the root is ʿal-ḥ-i, thus sound, and only the ending ʿal, which is part of the pattern iḥanā is “weak” (al-Sharīf al-Djurđani, Ṣalāhīhā, ed. Abd al-Rahmān Umayra, Beirut 1408/1987, 154 [read ṣanākā for ṣaṭīkā]).—The term ṣālim is also used to denote the “sound” plural (al-ṭamām-i ʿal-ṣālim) as opposed to the “broken” plural (al-ṭamām-i al-ṣālim) [see ʿaṣma]. 3. In prosody, the term denotes a regular foot, which has not undergone any of the changes called zihāfūt or šīl [see š-RQ], or a line of poetry consisting of such feet. It is, therefore, particularly common in Persian prosody, where ʿūṭāfī may not change from one line to the next as they do in Arabic. The lines will thus be ṣālim throughout the whole poem.

1133/1720. He began his studies when he was about seven years old with Yeni-Bağcöeli Feydullah Efendi. In 1104/1692 he was appointed muğdarris at the madrasa of Siileymaniye. In 1107/1695, he married Nadja al-Sanhuri al-Misri, a Malikî jurisconsult. He became kadi asker of Anadolu and two years after that kadi asker of Rumeli, but he never became Shaykh al-Islâm like his father.

Mirzâ-zade Mehmed Emin’s principal contribution to the Ottoman literary arts is his Tedhkire-yi shârâni,22 which contains details, as known to and described by the author, concerning the lives and works of over 400 Ottoman poets who were alive and active sometime between the years 1099/1688 and 1134/1722. Sâlim may be regarded as an innovator in the art of compiling biographies of poets: his type of biography does not seem to be intended to simply praise the poets. He appears to have been very much aware of the uninterrupted flow in the production of this literary genre that had been present in the Ottoman society in the 10th/16th century. We must assume that he knew that he was operating within a well-established tradition, but this did not stop him from making adjustments in the way in which each poet and poem were treated. This is reflected in the very critical approach he adopted in his appraisal of both the poets and their poems. His attitude could be the result of the changed way of assessing literature that had begun to develop among some Ottomans in the early decades of the 11th/18th century with Nedin’s (d. 1143/1730 [q.v.]) successful efforts to relate his art more closely to local developments and everyday life.

There was, at the same time, growing interest in European literatures that must have had some impact on the Ottoman litterateurs. In this respect, one may consider Sâlim’s Tedhkire as a valuable contribution, not only to the genre but also to the literature in general. His Tedhkire is in two parts. The first is devoted to the usual eulogies which are in this case addressed to the reigning Sultan Ahmed III (1115-43/1703-30), followed by Sultan Mustafâ I (1106-15/1695-1703) who preceded him, the Grand Vizier Dâmâd İbrahîm Paşa and the Shaykh al-Islâm. Then follow the author’s introductory remarks in which he reviews previous tedhkires leading up to his own and then expresses his thoughts on the state of literature in his own day. The rest of the work is devoted to the biographies of the poets. Each biography ends with samples of the poet’s poems, some in their entirety, others in the form of a verse or two. The work finishes with a temmet (“It is completed”) in which the author asks to be excused for his errors, but does not apologise for the tediously verbose and ornate style he uses. The Tedhkire carries a date in the form of a chronogram which adds up to 1134/1722. Sâlim’s Tedhkire-yi Sâlim, ed. Ahmed Djeuwet, Dâr-i Şââdiet 1315; Tedhkire-yi Sâlim, ms. Sâlim, Muhammed Küli, an Indo-Persian poet of the 11th/17th century, died 1057/1647-8.

He originated from the Şamlû tribe of the Turks and was a native of Tehran, but details regarding his life are scanty. In Persia he served under Mirzâ ʿAbd Allah Khân, governor of Lâhlgân [q.v.] in Gilân. During this time he married and had a son. Among the eminent personalities to whom he addressed his poems in the beginning were the xxiv and xxv rulers Shâh ʿAbbâs I (r. 996-1038/1588-1629) and his successor Shâh Şâfiî I (r. 1038-52/1629-42). Perhaps his failure to find the desired patronage in his country led him to try his fortune in India. He set out by sea, reaching Gujûrât around 1041/1631, coinciding with the early period of Shâh Djiân’s reign (1037-68/1628-59). It is likely that he sought access to the imperial court but was unsuccessful; Wâlî Dâhjîstânî, author of the Roydî al-ṣârâni,32 reports that the poet-laureate Kâfîm [see Kâfîm, ʿAbd Küli], when asked by Shah Djiân to give his opinion about the poet, told the emperor that Sâlim was poetically ill-provided since one of his muthânasî, which he said was written in praise of Kâhîrî, had been composed by him originally in praise of Gilân and he had merely changed its title. This accusation supposedly prevented Sâlim from
winning royal patronage. Thereupon he attached himself to Mir Abdul Salam Mashhadi, called Islam Khan, a prominent nobleman of the period, who succeeded him in governmental positions, ending as governor of the Deccan. Salim stayed in his service until the latter's death on 14 Shawwal 1057/12 November 1647. In the same year the poet also passed away, and his body was laid to rest in Kashmīr.

In his character, Salim has been described as a gross person indulging in improper jokes. He would display his wit indiscriminately without regard for the social status of the individual towards whom it was directed. On a certain occasion, while being entertained by the governor of Fars, Imām Kuli Khan (d. 1032/1622-3), the poet came out with an improvised couplet, displeasing to the host, who felt slighted by the allusion in it regarding his farness.

Salim's divān comprises poems representing kasīda, ghazal, kifā, rubd and mathnawi. Estimates vary regarding the total number of verses in the divān, but Dhabl Allah Ṣafta places the total around 9,000 couplets. Salim's poetry is praised by writers in several plays in the literary language in prose and verse. Despite vehement criticism, he included women actresses in his troupe, and his version of 'A'da (Beirut 1875), to which he had added popular Arab airs. He performed his uncle Mārun's [q.v.] al-Ḳabīl and Abu 'l-Hasan al-Mughefīl el Hārin el-Ḳabīl, and his own Musa wa-Ḥurās in Beirut. Though cholera initially prevented them from travelling, in 1876 he led the first Lebanese troupe to Egypt.

Joining the Damascene Adib Iṣbāk [q.v.], the troupe, al-Ṭīṣārāt al-ʿArabi, performed at the Zizinia theatre in Alexandria Mārun's Abu 'l-Hasan al-Mughefīl and al-Ḥāṣid al-Salīf, and Salim's Musa wa-Ḥurās, al-Ḳabīl and al-Ẓālām, in a season extending from December 1876 to February 1877. The répertoire is said to have included also al-Ḳabīl, an adaptation of Racine's Phèdre, and his Mithridate, Meyerbeer's opera L'Africaine, 'A'da, and Gharib al-Sudaf el Salīm el-ʿArabi (in versions all attributed to Salim), Racine's Andromaque, al-Bāṭiriyya al-ḥasān (La Belle Époque by the Comptesse Dham), and Charlemagne (from the highly successful play of Henri de Bornier) (all adapted by Adib), and Zohib of l'abbé d'Aubignac. Al-Ḳabīl (Alexandria 1913) was an adaptation of Comédie's comedy Le Menestrel made by Habib Musk and revised by Salim. The tragicomedy Hīf al-Wuddāl al-Zalām (Alexandria 1891), said to be a translation, is about intrigue and romance in an Arab setting. Though audience response had been very supportive, and Salim did his utmost to keep his company alive, he eventually ceded control to one of his actors, Yusuf al-Ḳhayyāt's troupe in 1879, because the Khedive thought it alluded to him and his government disparagingly. Gharib al-Sudaf (Alexandria n.d.) is a story of love and anti-colonial struggles in India. An anthology of Salim's plays, al-Marāb al-ʿArabi - dirāsāt wa-nuṣūṣ. 5. Salīm el-Nakkāsh, ed. Muḥammad Yūsūf Ṣagīr, Alexandria 1965, includes 'A'da, Musa wa-Ḥurās, al-Ḳabīl, Gharib al-Sudaf and al-Ẓālām. Though audience response had been very supportive, and Salim helped edit it. The pair of them founded a daily al-Tidjārī in May 1873 in Alexandria; some of the best writers, al-ʿAfnānī, Muḥammad 'Abduh [q.v.], 'Abd Allāh Nadim [q.v.], Ibrāhīm al-Lakkānī and Amin Shumayyil, were to write for it. Both papers, strongly

MUNIBUR RAHMAN

SALIM b. KHAṬĪB AL-NĀKKĀSH, Syrian Maronite journalist, historian, and pioneer of Arab theatre. Born 1850 in Beirut, he died in Alexandria on 25 November 1884. He studied Arabic, French and Italian. He worked on his uncle Nikūlā's al-Mishāb newspaper in Beirut and wrote for al-Nadīgh and al-Zāhira. He was employed in the customs in Beirut in 1876. In the family tradition he became involved with the theatre with an adaptation, Musa wa-Ḥurās (Beirut 1868), of Corneille's tragedy Horace, to which he had added poetry and songs. Seeking material support for a theatrical venture, he went to Egypt. The Khedive Ismāʿīl [q.v.] agreed to grant him use of a theatre, scenery, and costumes and financial support. Salim began rehearsing his troupe in the summer of 1875, writing for it several plays in the literary language in prose and verse. Despite vehement criticism, he included women actresses in his troupe, and his version of 'A'da (Beirut 1875), to which he had added popular Arab airs. He performed his uncle Mārun's [q.v.] al-Ḳabīl and Abu 'l-Hasan al-Mughefīl el Hārin el-Ḳabīl, and his own Musa wa-Ḥurās in Beirut. Though cholera initially prevented them from travelling, in 1876 he led the first Lebanese troupe to Egypt.
nationalist, were suspended in November 1879 for their criticism of the government of Riyād Pagla and of foreign interference in Egyptian affairs. Salim is said to have been a member of the radical nationalist Miṣr al-Fatā'ī/Jeune Égypte. After Adīb travelled to Paris, Salim started publishing a daily al-Mabrūsā and a weekly al-ʿAṣr al-Djawālī in Alexandria in January 1880; Salim followed a more moderate line with these papers. When in 1881 Salim was ill, ʿAbd Allāh Nadīm took over the running of both papers. With the return of Adīb and the reissue by him of Miṣr in December 1881, al-ʿAṣr al-Djawālī ceased to appear. al-Mabrūsā, opposing the nationalist policies of Colonel al-Mahrūsa, was suspended in June 1882 for its loyalty to the Khedive. After the riots of 11 June, Salim was forced to flee; his press was destroyed. Salim tried to restart al-Mabrūsā in September 1882, but it was not till the beginning of 1884 that he got compensation for the destruction of his press, and al-Mabrūsā reappeared as a weekly till his death.

The first three volumes of his lengthy Miṣr li ʿl-Mistriyyin aw ḥawādith al-fīta al-Urdjia, Alexandria 1884-6, describing Egypt from the time of Muḥammad ʿAlī to Ismāʿīl, are said to have been printed, but then destroyed on government orders; volume iv covers Tawfik’s early reign; v, ʿUrābī; vi, the British occupation; and vii–ix, the ʿUrābī trials. Riṣūd al-ʿIntikām aw al-ḥudūd al-ṣalāhī (Alexandria 1876) is a free translation by him and Adīb of the novel Le dernier rendez-vous by the French writer Pierre Zacccone.

AL-SALĪMĪ, Abū Muḥammad ʿAbd Allāh b. Ḥumayd b. Sullām al-Salīmī, Nūr al-Dīn (ca. 1286-1332/1289-1346), generally known in the West as ʿUmān, the name of a mystical-theological school in Baṣra, based on the teachings of Muhammad b. ʿAbd Allāh b. Sullām (d. 297/909) and his son ʿAbd Allāh b. Muḥammad b. ʿAbd Allāh b. Sullām (d. 356/967). In the sources, father and son are often confused. Both were pupils of the famous mystic Sahī b. ʿAbd Allāh al-Tustarī (d. 282/897) and his son ʿAbd Allāh b. ʿAbd Allāh al-Tustarī (d. 282/897) and his son ʿAbd Allāh al-Tustarī (d. 282/897) and his son ʿAbd Allāh b. ʿAbd Allāh al-Tustarī (d. 282/897), and in the stories of his teaching and work, he is also similarly opposed such dubious financial predecessors, and so impassioned did the issue become that early in 1914 al-Salīmī went to see him at al-Hamra'. On the way, he was killed when his donkey stumbled; he was buried at Taṇūf. It is against this background that the nature of his history of the Imāmate, Tuhfat al-ʿānīn bi-sīrat allāh ʿUmān, should be viewed. Finished ca. 1910, the story is continued down to the death in 1954 of the Imām Muḥammad b. ʿAbd Allāh al-Qāhirī by his son, Muḥammad (Ṣhayba), in the Nahdat al-ʿānīn bi-hurriyyat ʿUmān (Cairo n.d.), this contains a lengthy biography of his father which is the main source for this article. Amongst twenty-two works of his listed in it, attention should be drawn to such studies of major Ibnādī scholarship as his edition of al-Rābī b. Ḥabīb, also to his close cooperation with the great Mzābi scholar and activist, Muḥammad b. Yūsuf Atfāyīsh (1236-1332/1820-1914). It was Muḥammad’s son Abū ʿĪsā b. Ibrāhīm Atfāyīsh, who edited for publication the Tuhfa (first ed. 2 vols., Cairo 1347 and 1350), as also another remarkable work of his, the Dākhīn al-ṣawāfī wa ʿumān, a distillation in an urduyya of guidelines and judgements written as a sort of aide-mémoire for kāfīdī. His Talākīn al-sīyāsā became the standard book of instruction for Ibnādī children.

are known, even by title, the Kut al-kulub of al-Makki must be considered as the main source for the doctrine of the Sāliḥyya. The compilation of Sāḥib al-Tustari’s commentary on the Kitāb al-Kunūj does not stem from the Sāliḥyya but from other pupils of al-Tustari.

The existence of a tradition of the Sāliḥî school and doctrine in the 4th/10th century is attested by the Sufi Ibn Khāṣıf al-Širāzī (d. 371/982 [q.v.]), whose work against it, the al-Raḍd ‘alāl Ibn Sāḥib (i.e. Ahmad b. Muhammad), has not been preserved. The geographer al-Muqaddasī [q.v.], who finished his descripti

gon of the Islamic empire in 375/985, associated with Baṣra with adherents of the school. He relates that at that time they were Mālūkīs, but that their founder had been a Hanafī, that they studied theology (kalām), for which they had their own books, and that their main concern was renunciation of the world (zuhd).

None of the early sources mentions them explicitly as Sūfīs. Abū Naṣr al-Sarrāḏ (d. 378/989 [q.v.]), the author of the Sūfī handbook al-Luma’, records a discussion with Ahmad b. Sāḥib in Baṣra about mystical sayings of Abū Yaʿāqūb al-Bīštāmī, considered as heretical by Ahmad. Ahmad b. Sāḥib is also otherwise often mentioned in the Luma’. It was probably on account of Ibn Khāṣīf’s lost work that a catalogue of alleged heretical views of the Sāliḥyya came into being among the Hanbalīs. Reference to these views is first found in the works of Ibn al-Farra (d. 458/1066 [q.v.]), and in the work of Chios [see SAKZ], Naxos [see NAKSHE] and al-Mahdiyya (Tunisia) [q.v.], in the Cypriot sandjaks of Kerynia (Ott. Girne), Paphos (Ott. Bāf) and Famagusta (Ott. Maghāshá [q.v.]), and Aleppo [see HALAR], some governors had sāliḥyye status. There all tax revenues went to the state treasury. The local defterdar collected the taxes and paid the governor, the sdliydne mukadda, and the taṣarruh timdr. Their governments were formed a defensive line with the citadel of Busra [see FAMAGUSTA] in the Cypriot Mahdiyya (Tunisia) [q.v.]. There all local expenditure. The remainder of the revenue had to be transferred to the central treasury (see Mazzâ’ir and IRSALIYYE). In the 17th and 18th centuries there were nine sāliḥyya provinces: Egypt [see MISK], Baghdad [q.v.], Baṣra [q.v.], Ḥabash [q.v.], Yemen [see YAMAN], al-ʿAbāṣa [see AL-ḤASH] the oγqis of the West, Algiers [see NAζAζ-1-γHAR], Tunus (Tīnūs [q.v.]) and Tripoli [see TĀRABULUS-ΓHAR]. In the province of Kef [q.v.], Crete (Ottoman Girid [see SĪRΓTCIY], and the southernmost advance post of Syria towards the desert lands of Arabia and on the junction of important trade routes, connecting the main north-south axis via Damascus with the road from the Mediterranean towards east to Bağhdād and beyond. It was strongly fortified by a mighty castle, which formed a defensive line with the citadel of Buṣrā [see BOZRA], about 23 km/14 miles further west.

Today, its historic importance is only shown by the impressive ruins of the castle, built in solid black basalt massive and massive domes, the top of the Emirate, and the isolated hexagonal Ayyūbīd minaret in the city centre. Despite the poor state of preservation, the glorious past can be deduced in some detail from the chronicles or geographic manuals, and especially from a remarkable number of Arabic inscriptions re-used in recent constructions of
The Druze population, who have resettled the completely abandoned ancient site since 1860. With the continuous removal in recent times of most of the traditional fabric, the evocation and imagining of the citadel has been undertaken by the Syrian Antiquities Organisation since 1991.

The history of Salkhad, as a defensive bastion for Damascus, closely mirrors the fate of the Syrian capital, and its history has been similar to that of the neighbouring town of Busra.

The Fatimid, Seldjuk, Burid and Zangid periods. The citadel of Salkhad was evidently founded or enlarged in 466/1073-4 by the chief of the Banu Kalb Bedouins, Hassan b. Mismar, as a base for attacks against Damascus, then belonging to the empire of the Fatimid caliph al-Mustansir. After the expulsion of the Fatimids from Syria in 468/1076 and the subsequent foundation of a new Seldjuk dynasty by Tadj al-Daula Tutush [see SALDUKIDS. III. 4, and TUTUSH], the new master of Syria invested his sons Fallus and Busra. Shortly after, when power in 497/1104 passed to the Zangid, Ayyub b. Izz al-Din Aybak al-Hamawi, as well as for the powerful amirs of both personalities. In 604/1208 it was bestowed on the Zangid ruler Nur al-Din Mahmud al-Ayyub (644-71/1247-9), who invested his family in 588/1186, both towns were bestowed on Sadlk b. A1I, the acting governor of Salkhad, strengthened by additional fortifications. But the available data clearly testify to the systematic improvement of the region, evidently resulting in an increase of the rural population.

Following the deposition of Aybak al-Mu‘azzam, the fieid of Salkhad henceforth was administered directly by members of the Ayyubid family: the Malik al-Salih Nadjm al-Din Ayyub (644-71/1247-9), the Zangid ruler Ayyub b. Izz al-Din Aybak al-Hamawi, as well as for the powerful amirs of both personalities. In 604/1208 it was bestowed on the Zangid ruler Nur al-Din Mahmud al-Ayyub (644-71/1247-9), who invested his family in 588/1186, both towns were bestowed on Sadlk b. A1I, the acting governor of Salkhad, strengthened by additional fortifications. But the available data clearly testify to the systematic improvement of the region, evidently resulting in an increase of the rural population.

The Mamluk period. In the aftermath of the Mongol conquest, al-Zahir Baybars [q. v.], who successfully expelled the Mongols from Syria and decisively reduced the Crusader dominions, systematically reorganised the Syrian provinces. The citadel of Salkhad was immediately reactivated and soon extensively repaired and strengthened in 668/1270 and 669/1271 under the supervision of the amir Balabán al-Afram, as testified by several inscriptions and a series of stone carvings with representations of the lion, the blazon [see RANK] of sultan Baybars, now dispersed throughout the region. Shortly thereafter, al-Manṣur Kalawûn in 679/1280-1 invested the amir Mu’azzam Turân Shâh (648-84/1249-50), al-ʿAzîz Muhammad (648-58/1250-60), and al-Zahir Ghâzî (658/1260). Despite a final extension of the citadel in 647/1249, the town had to suffer the military might of the victorious Mongol army in 658/1260.

The later steady decline in Salkhad's strategic importance, as also that of Busrá, is attested by its use as a place for disgraced Mamluk officials. This first occurred when the former sultan al-ʿAdil Ktibghâb nominated as governor of Salkhad a text, a forceless resignation in 696/1297. This also occurred with the dismissed governor of Damascus, ʿIzz al-Din Aybak al-Hamawi, as well as for the powerful amir Akkûh al-Afram and Karasunkur al-Manṣûr (both fleeing to the Mongol court in 711/1312), and finally also for Akkûh al-Aẖrāfī. Throughout this period, Salkhad still flourished as regional centre, even maintaining a bath complex (hamam), registered in the inventory of the viceroy of Syria and governor of Damascus, Izz ad-Din A1I, compiled on the occasion of his dismissal in 740/1340.

Because of its heavily fortified citadel, Salkhad retained some importance in the later Mamluk period. In 824/1421 it served as retreat of the governor of Damascus Dâjkâm al-Dawâdâr, after an unsuccessful revolt following the death of the sultan al-
Mu‘ayyad Shawkh. The latest historical datum marks the appointment in 842/1438-9 of the low-ranking of Mutayyad Shaykh. The latest historical datum marks the appointment in 842/1438-9 of the low-ranking of Mutayyad Shaykh. ed. Al-Sallami's fame arises from his history of the governors of Khurasan, the K. Wulfi Khurasan, which is now lost but which was used extensively (and independently of each other) by the Ghaznavid historian Gardizi [q.v.], and then by Ibn al-Athir for events in Khurasan and Transoxania up to the death of Abu ʿAli Ǧāghānī in 344/955 (this being the last event apparently taken from al-Sallami’s work and common to the narratives of the two later historians). Al-Sallami’s work was still known to, and cited by, the historian Gardīzl [q.v.]. The family of Ziyad already had a firm grip on the East in the later years of Muʿawiyah’s caliphate, and when Yazid I came to the throne, he appointed Salm as governor of Khurasan (61/681), and the latter nominated another of his brothers, Yazid b. Ziyad, as his deputy in Sistan. Salm proved himself a highly popular governor with the Arab troops in Khurasan, largely on account of his military successes. He led raids across the Oxus against the Soghdian princes of Transoxania and to Samarqand, and is said to have been the first Arab governor actually to winter across the river; he also raided Kh-zārazm. His lieutenants were, however, less successful in eastern Afghanistan against the Zunbils, the local rulers of Zamindawar [q.v.], and the Kābul-Shāhs; his brothers Yazid and Abu ʿUbayda were respectively killed and captured by the leading expeditions thither.

When Yazid b. Muʿawiyah died, the Arab army in Khurasan agreed with Salm to continue giving allegiance to him until the situation in the central lands of the caliphate should be clarified (63/683), but they soon renounced this allegiance; Salm was forced to return to Başra, and the East came to be dominated over the next years by the leader of the Kays party there [see KAYS AND YAMAN], ʿAbd Allah b. Khazim al-Sulami [q.v.], whom Salm had nominated as his successor over Khūrsān. In the prevailing uncertainty, Salm seems to have had the idea of giving allegiance to ʿAbd Allah b. al-Zubayr [q.v.], but was arrested in Başra by the latter, who had just set himself up as anti-caliph in Arabia and the East. Salm was imprisoned at Mecca and mulcted of four million dirhams which he had gained from his two years’ governorship. He subsequently contrived to escape when al-Haddājī [q.v.], came to Mecca and the caliph ʿAbd al-Malik appointed him to the East once more, but he died at Başra in 73/692 before he could reach Khūrsān.

Salman-i Sawadji — Salmās

Djalayirid dynasty. From 744/1343 on, Salman was in the service of the Djalayirids, and in time he was the teacher of Hasan Buzung's son Uways (r. 757-76/1356-74). Most of Salman's panegyric kasidas [q.v.] are in praise of the sultans Hasan and Uways and, notably, of Dīlghād Khāṭūn. The service of the Djalayirid house made Salman a comparatively wealthy man, but frequent travel in the court's entourage seems to have damaged his health, for in a number of poems the poet complains of malaria, ailing feet and sore eyes and expresses his desire to lead a stationary and secluded life away from the court. In the last year of his life, under Uways's successor, Husayn, Salman fell from favour because of his apparent siding with Husayn's rival Shāh Shudjā. The most probable date of Salman's death is Monday, 12 Safar 778/30 June 1376.

Salman's poetic work comprises about 21,000 bayts; it consists of his diwan (kasidas, tarkibdt, tarajjbd, kifas arshid, mathnawi Djamshid u Kh w [q. v.]).

Like Hāfiz, Salman was taken as a model by following poets. His me maqām, Diwan-i Salmdn-i Sdwadji, ed. J. Asmussen, Tehran 1348 (ms. Paris, B.N. ar. 5909); cf. K. al-Mddjid al-Azdi, Opera minora, i, 475-6); in about 220/835 Persia and the Persian province of Adharbaydjan. The district com-

prised a fertile plain near the northwestern corner of Lake Urmia, bounded on the west by the Harawī Mountain range with the pass of Khānasūr (2,408 m/7,900 feet) leading into Turkey and on the east by the Kūh-i Awgān. The modern town of Salmās, Shābūr or Dilmān (lat. 38° 13' N., long. 44° 50' E.), lies 48 km/30 miles to the south-south-west of Khōy [see khor] on the Zala Čay river. The region of Salmās has been inhabited since earliest known times, as shown by the remains there from the Urartian culture onwards. In classical Antiquity it came within the province of Persarmania, and Constantine Porphyrogenitus mentions Salmas along with Cherrī (i.e. Khōy).

Salmās seems to have been conquered by Arab troops from Dīyār Rabi'a [q.v.], since al-Baladūrī states that the taxation of Salmās had long been transmitted to Mawṣil. In the 4th/10th century it came within the principality of the western branch of the Daylamī Musafīrīds [q.v.] under Marzubān b. Muhammad b. Musāfīr. In 332/943-4 Marzubān, both fought off a Hamdānī raid on Salmās, and in 344/955-6 the Kurdish adventurer Daysam attacked it. Al-Iṣṭākhri and Ibn Hākawī describe Salmās as a small town of Adharbāyjān, with a strong wall, in a fertile region. Al-Muḳaddasi describes it as a Kurdish town (these Kurds would be from the Hādībānī tribe) and considered it as being administratively part of Armenia. In 456/1064 the inhabitants of Salmās joined the Saljuḵsultan Aṯār’s expedition against the Byzantines, Armenians and Georgians. By Yāḵū’s time, however, the town was in ruins; yet in the mid-8th/14th century Hamd Allāh Mustawfī says that it was once more flourishing, with its wall, 8,000 paces in circumference, rebuilt in the time of the Il-Khan Qhanzān by the vizier Kāda-Tād al-Dīn ‘Alī Shāh Tabrīzī; the revenues of Salmās (presumably the whole district) amounted to the substantial sum of 39,000 dinārs (see Abū Dulaf, Second Risalah, ed. and tr. V. Minorsky, Cairo 1955, tr. 37, comm. 76; Hudud al-‘ilm, Minorsky, § 36.11, tr. 143; Le Strange, Lands of the Eastern Caliphate, 166; Schwarz, Iran im Mittelalter, 962, 1108-11). This mediaeval town of Salmās then gradually declined, and today may be marked by the village in the northwest of the Salmās district called in the early 20th century Kuhnā Shahr (“old town”) on the road from Albak and Katur.

The modern chef-lieu of the district, in the 20th century known as Shāhpūr and before that as Dilmān (which latter name seems to indicate a connection with the Daylamīs who at times controlled the region, e.g. the Musafīrīds) lies in the centre of the plain (lat. 38° 13' N., long. 44° 50' E., alt. 1,430 m/4,690 ft.). In 1930 the town had some 8,000 inhabitants, almost all Shī’ī Muslims, but the surrounding villages included a good number with Christian populations. Both Nestorian Assyrians and Catholic Chaldeans, these last converted in the 18th century and having a bishop at Khozarsaw; as early as 1281 there had been a Nestorian bishop of Salmās present at the consecration (chretoronia) of the Patriarch Mar Yaballaha in Baghdad (Assemani, ii, 456). It was in Urdu-Bihṣij 1309/April-May 1930 that the town was largely destroyed by an earthquake, but rebuilt on Rodā Shāh Pahlavi’s orders. The region was badly from the Russo-Turkish fighting in the First World War, and in the post-war period had occurred massacres of the Christian population by the Muslim Kurds; it was in 1918 that the Nestorian Patriarch Mār Shīmūn Benjamin was murdered at Kuhna Shāhr by the Kurdish bandit chief Ismā’l (Simko) b. ʿAlī Kūhān (see Naṣṭūrīyyūn and J.F. Coakley, The...

(SALONIKA) [see SELANIK].

SALSABIL (A.), the name of a fountain in paradise. It is mentioned only once in the Koran, in LXXVI, 18: the righteous who are in paradise in the hereafter will be given there a cup to drink in which has been mixed ginger (zandjabil), from a fountain therein named Salsabil.

Exegetes approached the word from two directions: etymology linked to meaning, and grammar. The word was postulated to have been derived from sallu, salabu, (Najm, LXXI, Leiden 1910), where it was connected with the idea of being "easy to swallow" or "delightful in taste", attributes considered appropriate to liquids consumed in paradise. The presence of the letter bā in the word was, according to some, simply to be understood as non-radical (zāʾīda). More imaginative was the approach which saw the word composed of the imperative of the verb sala plus sabīli: "ask for a way!", according to Ibn Kuttaba, Taṣfīr ʿabar al-Kurān, Cairo 1978, 4, some have said that the word suggests that the fountain is calling, "Ask me for a path to it (the fountain), O Muhammad!" General grammatical comment regarding etymology and meaning, focused on the presence of the tanwin at the end of the word (the absence of variant readings suggests that it was never read otherwise). If the word was a proper name, then, it was generally argued, it would normally not be fully consumed in paradise. The presence of the letter sīna in the word was postulated to have been derived from the Roman administrative designation Regis saltus, a crown domain within the province of Palaestina Prima that was probably granted by the Emperor Septimius Severus (A.D. 192-211). The tomb complex and adjacent reservoir and olive press discovered in 1978 on the outskirts of the city may have belonged to a family entrusted with this crown domain.

The first reference to the name al-Salt occurs in 512/1118, following the death of Baldwin I of Jerusalem, when his successor Baldwin II sent an envoy to the atabeg of Damascus ʿAzhir al-Dīn Tughūtin [see būris] requesting an extension of the truce. Tughūtin responded positively on condition that the revenues from Djabal ʿAwf, Hannāna, al-Salt, al-Ghawr and al-Djawlan should be collected exclusively for the Muslims. Baldwin II refused this stipulation, and it seems that the earlier arrangement was terminated after ʿAlāʾ al-Dīn’s victory at Hitīn in 583/1187, when the Muslims established their control over these lands, and in 588/1192 al-Salt was assigned to the sultan’s brother and successor al-ʿAdîl. In 617/1220, al-ʿAdîl’s son ʿSharaf al-Dīn ʿĪsâ erected a citadel on a mountain known as Raʾs al-ʿAmīr, in response to an attack on a caravan by a group from the Banū Raḥmān from the nearby village of Kafr Yahūda. This citadel later served as a place of banishment, as when in 637/1239 the family of al-Malik al-Sāliḥ, his treasury and his horses were sent there. In 644/1246 some Khūārasmian refugees settled at al-Salt, but were forced to flee to Karak when the town was attacked and burned by a certain Fakhr al-Dīn Ibn al-Shaykh. The Mongols reached al-Salt in 659/1260, where they were opposed by Bâd al-Dīn Muhammad al-ʿAtēbēk; he surrendered the town, but the Mongols retained him in authority there.

Mamluk sultan al-Zāhir Baybars al-Bundukdār (d. 676/1277) repaired and expanded the
citadel at al-Salt, and stationed troops there. He also
took the town's mosque. Mamluk period
sources describe al-Salt as being prosperous and noted for
its orchards. It came within the wilayat al-Balka, the
sixth wilayat of the southern shafa of Damascus.
The administrative status of al-Salt varied, but
towards the end of the Mamluk period it had eclipsed
both Hisham (Ebusos) and 'Amman. Its residents
probably followed the Shafi madhab, for it is known that there had a Shafi'i kadi, and that the amir Sayf
al-Din Begtimmer al-Husami (d. 729/1328) founded a
Shafi madrasa there. A number of learned men with
the name of al-Salti are listed in the biographical
documents of this time.

The Ottoman tapu defters provide significant infor-
mation about al-Salt. In 954/1538 it was the seat of a
nakba comprising two mahallas: Awamna east of the
citadel and Mahallat Akrad west of the citadel; be-
tween them there were 168 households, ten bachelors,
four imams, ten Christians, and six soldiers who
taxed the population. An order by the pasha of 959/1551 states that al-Salt was in a ruinous state,
which corroborates the population decline recorded in
tapu defter of 1005/1596. Both defters detail the sum
of 12,000 akces in dues that were collected from al-Salt
as part of the allowances of the mir liwa of 'Adjudin.
Christians paid the poll tax at the rate of 80 akces per
head. At the time, al-Salt was a market place for the
district, while Hisham is reported as having been
derelict.

The citadel at al-Salt continued to be well main-
tained. In 1033/1623, Fakhr al-Din al-Ma'ni II
visited al-Salt and installed a garrison of fifty men
there. It is claimed that the citadel was destroyed by
Ibrahim Pasha [q.e.] during his presence in Syria be-
tween 1247/1831 and 1256/1840, and only ruins sur-
vene today, including trenches that give the
impression of houses, shops, baths, and other buildings;
and through its military garrison maintained control
over the region, especially the Abad, 'Adudan, and
Banu Saqhar tribes. This security attracted the influx
of capital, which is reflected in the town's Ottoman-
type mansions, many of which survive today.

Al-Salt was ahead of the rest of the country in
education because of the number of both state and
missionary schools that were established there. The
first secondary school in Jordan was established there
in 1344/1925, and it accordingly had an important
early role in building the modern state of Jordan.

(M.A. AL-BAKHTIT)

SALTANA (A.) 'sovereignty, ruling power',
from the verb saltana 'become ruler, exercise power',
with suldan meaning 'force' (khar), thence by ex-
ension of the holder of power. Suldan is found in the Kur'an; see for a detailed discussion of the Islamic
origins of the term and its later developments, saltana.
The Arabic papyri from the first century of Islam have
such expressions as kharadja al-suldan or bas mal
al-suldan, with the sense of 'authority of the govern-
or, of the governor, wali or bakim'. In the standard
Arabic dictionaries (Ibn Durayd, Dammara, iii, 27;
Ibn Siduh, Mukhassas, iii, 133 ff.; Ibn Farsi, Mu'jam
mukjiri al-ta'bih, iii, 95; L.S., iii, 2066-62; al-
Firuzabadi, Ramai, ii, 356-65; T.A., v, 158-60; Butrus
al-Bustani, Maad, iii, 605-6); suldan is invariably
connected with the idea of constraint. In the popular
Arabic usage, suldan means 'oil', in Yemen, 'sesame
oil', and suldan is thus connected with salti because oil,
it is asserted, serves to make things clear, just like
political authority. Hence amir is described as
sultans because the latter term is the divine proof
which is used to put the proof into practice.
The term was employed in the fikh works and in adab ones, whence the title of the first chapter of Ibn Kutayba's *Uyun al-akhbār: kādī al-saltānā (in which the author defines the role and attributes of the sultan).* For the subsequent development in practice of sultan as a personal title, see sultān, in addition to which it should be noted that al-Kalqāshandi, speaking of the evolution of power in Egypt, states that, under the Fātimids, authority (sultānā) was acquired by the "vizierate of delegation" (ṣarāt saltanātuh dīwārāt al-saltāfīd (Ṣuhb, ix, 403).

Saltana is found in combination with many terms: dār al-saltānā, dasta al-saltānā, takht al-saltānā, sanr al-saltānā, nimdihat al-saltānā, wadīd al-saltānā.

**SALTUK OĞULLARI**, a Türkmen dynasty that ruled a principality centred on Erzurum [q.v.] from ca. 465/1072 to 598/1202.

The information on this dynasty from all sources is rather sparse and somewhat confused. It was apparently founded by one Saltuk, who was among the Türkmen bent on conquering Anatolia after the battle of Malazgird [q.v.]. Ibn al-Āthir (d. 630/1233) says the founder was a certain Abu l-Ćāsīm, who may have been the same person. The Saltuk-oghullari seem to have established the first Türkmen principality in Anatolia after Malazgird. In addition to their capital at Erzurum, they also controlled a part of Trans-Jōran, against which the Georgians began to attack eastern Anatolia. In 516/1123, the Saltuk-oghullari concluded a marriage alliance with the Artukids [q.v.], and the Georgians attacked Erzurum for the first and last time.

It was presumably after this event that there occurred the curious incident in which Nāṣir al-Dīn's son Muzaffar al-Dīn's son Muhammad Tapar in his struggle against Berk-yaruk. In 516/1123, the Ayyubid sultan al-Malik al-Ćāsīm's son was allied with the Ayyubid ruler of Mayyafārīn against the Šāhī Arman. In 597/1200, he asked the Ayyubid sultan al-Malik al-Ćāsīm to arrange a marriage for his daughter. At that point, she seems to have been overthrown by Muzaffar al-Dīn's brother Malik Šāh. These events probably disturbed the Saldjuk sultan of Rum, Sulaymān II, who was hostile to Ayyubid ambitions in eastern Anatolia. Consequently, when he marched through Erzurum in 598/1202 on a campaign to Georgia, he imprisoned the curious incident in which Nasir al-Dīn's son and Nasir al-Dīn's sister Mama Khatūn in Terdja. Erzurum was a flourishing emporium and acquired a number of monumental buildings. Diya ʿal-Dīn built the Tepsi Minār and Kale Camii, and Nāṣir al-Dīn built or completed the Ulū Camii. Also noteworthy is the türbe of Mama Khatūn in Terdja.

**SALTUKIDS** [see SALTUK OĞULLARI].

**SALTUKI**, the name given by the Arabs to a member of the gatehound family, so-called because it pursues its quarry by sight and not by scent. The saltuki stands about 25-6 ins. in height at the shoulder. The saltuki has often been mistaken for the greyhound by travellers to the Middle East, but the ears are long and pendulous, while the greyhound's are short and pricked, and the greyhound is wider in the body and more heavily built. Whereas the greyhound is a sprinter, the saltuki is possessed of great stamina.

Abundant evidence exists in Arabic literature that the saltuki hunted oryx in the Djāhiliyā (see the Muwa'ālka of Labīd (ll. 49-52); the ḵudā in al-Nabīgha in C. J. Lyall (ed.), *A commentary on ten ancient Arabic poems*, Calcutta 1894, 154 ff. and 13-18); and Abā b. al-Ṭābil (ll. 29-39) and Abū Ḟuḍayyib (ll. 36-48) both in the *Mufaddalisiyya*. The huntsman, armed with bow
and arrows, would use a whole pack of saluki and the latter would hunt down and exhaust the quarry which, when turned and fighting back with its long, straight horns, would be dispatched by the huntsman's bow. The huntsman being at this time unaffected by the strict prescriptions on the killing of prey which would come into Islamic times. Although such hunting is not mentioned in the extremely stereotyped pre-Islamic poetry, the hunting of the gazelle and the hare by saluki must have taken place even before Islam.

Saluki has been a favourite hunter of the gazelle and the hare right through mediaeval times in the Middle East to the present day in Saudi Arabia and the Gulf. The former was hunted until fairly recent times by both salukis and saker falcons (see Smith, A new translation, 254). The sakers would bind to the head of the gazelle to confuse and delay it, while the saluki followed on and dragged the gazelle down for the huntsmen to slaughter according to the prescriptions of Islam (see Allen and Smith, Hunting techniques, 114-15). The hare has always been, and continues to this day to be, coursèd by the saluki. The latter will probably survive, despite the stronger interest now in birds of prey for hunting, because of the danger presented to the bird of prey when she tries to cope with the swift, jinking desert hare.

The origin of the word saluki is not easily arrived at. The word must have been used in pre-Islamic times, though its occurrence in the poetry of the period is rare (e.g. MufaddalIsyād, 61, banū salukiyayn “the offspring of two salukis”). The Arab geographers (listed in detail in Allen and Smith, op. cit., n. 25) suggest the name is the nisba of a place called Saluk in the Yemen near Taizz, or alternatively in the area of al-Lān to the west of the Caspian Sea, also called Saluk (ibid., map 121). Vire in his article (REI, xii/2, 231-40) opts for the latter which he calls the “patric d’origine de ces lévriers”. There is no reason, other why saluki should not be the nisba of one of many Salukiyas, towns founded by the ancient Seleucids and called after the dynasty. The most likely answer is that, for some reason, the Arabs regarded their prize hounds as being “Seleucid” salukis”.

(S. R. Smith)

SALUL, the name of two tribal groups in northern Arabia: a branch of Khuzi’as [q. v.] and a branch of the so-called Northern Arabian federation Kays ‘Ayān [q. v.], more precisely, the Hawāzin [q. v.].

1. The lineage of the Salul who were a branch of Khuzi’a was: Salul b. Ka’b b. ‘Amr b. Rabīb b. Ḥārīsha. The genealogists list, besides Salul himself, the following descendants of his as eponyms of tribal groups (the term employed is batin): Kumayr b. Ḥabgihya (variants: Ḥabgihya, Ḥabgiihya, Ḥabgīhya), Ḥulayl b. Ḥabgihya, Ḥalīm b. Ḥabgihya, including the descendants of Abū Ghurbān, who were numerous and formed many tribal groups, Dāṭir b. Ḥabgihya, Kulayb b. Ḥabgihya, al-Ḥizmir (variants: al-Ḥirmiz, al-Hurmuz) b. Salul, ʿAdī b. Salul, Ḥabtar b. Ḥabgihya, Ḥanī’a b. [see also Ibn Durayd, al-Īṭīṣākāʾī, ed. Ibn al-Salām Ḥārūn, Cairo 1378/1938, 468-73; cf. Caskel, <em>Garnamūr an-nasāb</em>, i, 198, 199; Ibn ʿAbd al-Rabbībī, al-Īṭīṣākāʾī, ed. Ahmad Amin et alii, Cairo 1384/1965; iii, 383; Ḥanī’a’s mother is said to have been the daughter of Salul b. ʿAshqāʾ (Ibn al-Kalbi, <em>Nasab al-Maṣād</em> wa-ʿl-Yaman al-kabīr, ed. Nadjī Ḥasan, Beirut 1408/1988, ii, 446), which points to a link between the two tribal groups called Salul).

There are two indications, both related to blood-revenge, that before Islam the Kumayr were the leading group among the Salul, and possibly among the Ka’b b. ‘Amr as a whole. First, one of the Kumayr, ‘Amr b. Khālid, vowed that he would not let the blood of a Ka’bī go unavenged (<em>Nasab al-Maṣād</em>, ii, 441). Second, when al-Walid b. al-Mughirā the Kuraishi Banū Maṭṭāḥīn [q. v.] died of an injury caused by a Khuzā’ī (who was either of the Kumayr or of the Ḥanī’āʾ) it was again a member of the Kumayr, Busr b. Ṣufyān, who intervened in the ensuing crisis. Busr guaranteed the payment of the blood-money agreed upon—a compromise was struck; Khuzā’ī did not admit responsibility for al-Walid’s death. Busr even brought his son to Kurayb [q. v.] as hostage. But Khālid b. al-Walid [q. v.], who was the son of the slain man, sent the boy back (Nasab al-Maṣād, ii, 447). Ibn Ḥadjar, Ṣuṭṭā, ed. Ali Muhammad al-Bidāji, Cairo 1392/1972, i, 293; Muhammad b. Ḥabīb, al-Munammak fi al-ṭabar al-kabīr, ed. Khurshīd Ahmad Fārīk, Beirut 1405/1985, 191-9; Ibn Ḥājīm, al-Ṣinā al-nabawiyayn, ed. al-Sakkāʾi et alii, Beirut 1391/1971, i, 52-4).

The crisis over al-Walid’s blood-money is illuminating with regard to Mecca’s internal politics on the eve of Islam. One assumes that in the dispute, the Banū Ḥāشم supported Khuzā’ī: the Ka’b b. ‘Amr of Khuzā’ī, to whom the Salul belonged, had an alliance with ‘Abd al-Muṭṭalib b. Ḥāشم (Ibn Ḥabīb, al-Munammak, 192-2). In this alliance, ‘Abd al-Muṭṭalib was the most important figure of the Kuraishi side. On the Khuzā’ī side we find, among others, representatives of the following Salul subdivisions: Kumayr, Ḥabtar and Ḥabtar. As usual in tribal alliances, marriage links were agreed upon: ‘Abd al-Muṭṭalib married on that day the daughters of two of the Khuzā’ī leaders who were party to the alliance, i.e. the representatives of Ḥabtar and Ḥabtar. The former bore him the famous Abū Lahab [q. v.] (see U. Rubin, Abū Lahab and rānī cīt, in BSOAS, xlvi [1979], 15), while the latter bore him al-Ghaydāk (M. J. Kister, On strangers and allies in Mecca, in JSAI, xiii [1990], 140; M. Lecker, The Banū Sulaym: a contribution to the study of early Islam, Jerusalem 1989, 129). In other words, two of the Prophet’s paternal uncles were born by Salul women (Ḥassān b. Ḥāhir, Dīsān, ed. W. Afaraf, London 1971, ii, 16-7; al-Baladhurī, <em>Ansāb al-ṣaḥāfi</em>, i, ed. Muhammad Hamidīlābī, Cairo 1959, 71-2; gn użyta, i, 78a-b; Kister, op. cit., 151). The Madīginī position in the dispute over al-Walid’s blood-money was supported by the Abībātī [see Ḥabshā, Ḥabshā, at the end] who at some stage were called upon by the Maṭṭāḥīn to intervene (Ibn Ḥabīb, al-Munammak, 195-6). [q. v.]

The Arabian hound, Avian [q. v.], more precisely, the Hawazin [q. v.], a branch of the so-called Northern Arabian federation Kays ‘Ayān [q. v.], more precisely, the Hawāzin [q. v.].
The most important role played by the Salul before Islam was the one associated with Mecca in general and the Ka‘ba in particular. Their eponym Salul is said to have been a custodian (khuṣā‘) of the Ka‘ba. The Banu Salul were the custodians of the Ka‘ba, according to the Prophet’s saying, ‘This is my Ka‘ba, don’t let the Banu Salul be absent from it.‘ A prominent feature of the Salul, and one concerning which there was continuity from the pre-Islamic period to at least the 2nd century A.H., was the kiyafat [q.v.], i.e. the science of physiognomy and the examination of traces on the ground. It was a Salul, Kurz b. ‘Alkama, who allegedly tracked the Prophet and Abu Bakr when they left Mecca for the Hijra. Upon viewing the Prophet’s footprint, Kurz pronounced more than a year, ‘This is the same thing as that of Abraham, found at the mākām Ibrāhīm; according to the science of kiyafat, this similarity indicated that the Prophet descended from Abraham [see mākām Ibrāhīm, at VI, esp. 105b]. Later, at the time of Mu‘āwiyah, Kurz reinstated the marks indicating the boundaries of the sacred territory of Mecca (ma‘ātim al-haram, or aṣāb al-haram; Ibn Sa‘d, v, 338; Ibn Ḥadīr, Isbā‘a, v, 583-4; Caskel, ii, 374). The continuity from pre-Islamic times could be even pre-Islamic.

The Salul are a tribe in the Arabian Peninsula, noted for their historical and cultural roles during the Islamic conquests. They are descendants of Djandal b. Murra, a prominent figure in early Islamic history. After the conquests, some of the Salul settled in Medina, where they arrived some time before the Prophet's death. They were on the Prophet's side: while Busr b. Sufyan is described as a farmer, the Salul were farmers as well. They were divided into three tribal units: Kudayd, Asad, and Usd. The Salul are mentioned with reference to the land near the Ka'bah and a mosque in Cairo was called after them, among others. The prominent role played by Khuza'a and their mawali in the da'wa indicates that studying the history of this tribe after the conquests will further our understanding of the da'wa; cf. Caskel, ii, 41. Mâlik's brother, 'Awf, was one of the kawâlid of the da'wa and a mosque in Cairo (miṣr) was called after him (Nasab Ma'add, ii, 442). The above-mentioned Kurz b. 'Allama is said to have inhabited 'Ashâlân (Ibn Hadjar, loc. cit.); Abu Maryam, a member of the Salul who was in Kufa at the time of Mu'awiya, is said to have embraced Islam in 6/627-8 (i.e. before his children were called, as e.g. Ibn al-Kalbi, Nasab Ma'add, ii, 446; Ahmad b. Muhammad al-Kurtubi, Ta'rif f 'l-ansâb wa 'l-tanwth li-dhawi 'l-a'sâb, ed. Sa'd 'Abd al-Muqâsid Zakâm, Cairo [1407/1986], 81; al-Baladhuri, Khânânat al-adab, ed. Hûrân, Cairo 1387-1406/1967-86, iv, 442; cf. Caskel, ii, 509) or the name of a daughter of Dhühl b. 'Áshâb b. 'Áshâb (i.e. the eponym of the Banâ Dhuâl of the Bakr), according to another version, only some of the Banû Salûl were called Banû Salûl (cf. Caskel, ii, 509). According to another version, some of the Salûl were the descendants of 'Abd al-Malik b. Marwan and his son 'Abd Allah, who received a grant from the Prophet. The genealogists list the following eponyms of tribal groups: Djjân b. Mâlik b. 'Áshâb (al-Tabâni et al., Beirut 1401-9/1981-8, iv, 411; al-Dâhîz, al-Bayân wa 'l-tabîyn, ed. Hûrân, Cairo 1395/1975, iv, 36). The Salûl still inhabit their old territory south of Târîf, especially Wâdî Biqâ (Hamad al-Dâjisîr, in: Maglulât al-'Arab [Riyadh] 1 [1397-1977], 37-43; C. Lyall, The Dîwân of 'Abd ibn al-Abrâm et 'Amîn ibn al-Tûfîlî, Leiden and London 1913, 113-14; Yâkût, s. v. Biqâ).

SALUR, one of the Oghuz (Turkmen) tribes. They are first mentioned in Mahmūd al-Kâhghâni’s (q.v.) Divân lughât al-turk (written 464/1072, tr. R. Dinkoff and J. Kelly as Compendium of the Turric dialects, Cambridge, Mass. 1982-5, 1, 101) as one of the 22 branches of the Oghuz. They may, in fact, have been the chief branch of that confederation. In the 4th/10th century, the Oghuz were spread across a wide area from the Issyk-Kul west to the Caspian Sea (P. Golden, The migrations of the Oghuz, in Archivum Ottomanum, iv [1972], 45-94). According to Rashid al-Din (q.v.), in his semi-legendary “Oghuz-nâma,” i.e. the Ta’rîkh-i Türkân ta’rîkhü hikâyet-i dîjiangiri-i sü section of his Dînamî-i tauswâri (written ca. 710/1310), the name Salur, as derived from the verb salmâk, meant “ready to attack, warrior.” He adds that the Salur tribe traced its descent from Dagh Khân, one of the six sons of Oghuz Khân, and was among a subgroup of tribes known as the uňuk (an analysis of this source is in F. Sumer, Oğuzlar’â ait destâm mahiyetinde eserler, in AUDTCFD, xvii [1959], 359-453). There are two main regions. In the former, they were called the Ak-Salur. In the latter tribal area, they were known as the Salur of Khurasan. The migrations of the Oghuz, anadolu, yazayan bazı iki otok oğuz boylarına mensûp teşkil-külleri. To go back by one of these routes, the poet Mustafa b. Yusuf (Kâdir Dârî) of Erzurum (d. second half of 8th/14th century) (Togan, Umnuni türk tarihten girisi, Istanbul 1946, repr. 1981, 272). A Salur Khân also appears in the genealogy of Uzun Hasan (861-874/1457-78) of the Ak-Koyunlu (J.E. Woods, The Aq-Koyunlu, Istanbul 1976, 187; idem, Osmanaî turk tarihine dar açıqlamalar, in Târîkh Arastmaları Dergisi, i [1963], 9, 23, 26-27, 29, 76; idem, Osmanî derindir anadolu ada yazar zamanı bazı iki otok oğuz boylarına mensûp teşkil-külleri, in Istanbul University Ikitsiz Pakâketsi Meâmuâ, xi [1952], 453-9, 486-92). The writer Fâhîr al-Dîn Muhammad b. Khâdja Hasan al-Salghurî al-Dîwîriyî (b. 631/1236), who gained fame in both Turkish and Persian letters, was from this tribe (Turan, Doğu anadolu Türk devletleri tarihi, Istanbul 1980, 69) as were the poet and statesman Kâdir Burhân al-Dîn (d. ca. 800/1398 q.v.), who put an end to the government of Ertana (q.v.), and the poet Mustafa b. Yusuf (Kâdir Dârî) of Erzurum (d. second half of 8th/14th century) (Togan, Umnuni türk tarihten girisi, Istanbul 1946, repr. 1981, 272). A Salur Khân also appears in the genealogy of Uzun Hasan (861-874/1457-78) of the Ak-Koyunlu (J.E. Woods, The Aq-Koyunlu, Istanbul 1976, 187; idem, Osmanaî turk tarihine dar açıqlamalar, in Târîkh Arastmaları Dergisi, i [1963], 9, 23, 26-27, 29, 76; idem, Osmanî derindir anadolu ada yazar zamanı bazı iki otok oğuz boylarına mensûp teşkil-külleri, in Istanbul University Ikitsiz Pakâketsi Meâmuâ, xi [1952], 453-9, 486-92). Khâdja Hasan al-Salghurî al-Dîwîriyî (b. 631/1236), who gained fame in both Turkish and Persian letters, was from this tribe (Turan, Doğu anadolu Türk devletleri tarihi, Istanbul 1980, 69) as were the poet and statesman Kâdir Burhân al-Dîn (d. ca. 800/1398 q.v.), who put an end to the government of Ertana (q.v.), and the poet Mustafa b. Yusuf (Kâdir Dârî) of Erzurum (d. second half of 8th/14th century) (Togan, Umnuni türk tarihten girisi, Istanbul 1946, repr. 1981, 272). A Salur Khân also appears in the genealogy of Uzun Hasan (861-874/1457-78) of the Ak-Koyunlu (J.E. Woods, The Aq-Koyunlu, Istanbul 1976, 187; idem, Osmanaî turk tarihine dar açıqlamalar, in Târîkh Arastmaları Dergisi, i [1963], 9, 23, 26-27, 29, 76; idem, Osmanî derindir anadolu ada yazar zamanı bazı iki otok oğuz boylarına mensûp teşkil-külleri, in Istanbul University Ikitsiz Pakâketsi Meâmuâ, xi [1952], 453-9, 486-92).
of Gurgândj or Urgandj. They also joined other Turkmen in the struggle against the Shi'i Safawids. In 1597, they raided the area of Asmartâbâd, but submitted to Shah 'Abbâs. This pacification was no doubt temporary. In 1843, the Salur and Tekke captured Marw and around 1838 they rose to support a revolt in Sarakhs led by a former governor of Khurâsân. The Persians crushed this revolt with great difficulty. The Salur subsequently lost their importance. Before the Russians began their occupation of Turkestan in 1869, the Salur lived primarily in the region between Sarakhs and the Murâbâ River. In the early 20th century, they were still concentrated around Sarakhs and along the Harî Rûd River in Turkestan. In the 13th/19th century, travellers estimated their population to be anywhere between 2,000 and 20,000 families divided among three branches of the tribe: Yalaâwâ, Kâramân, and Ana-Bölêghi (Kîlî-Ágha). Since the coming of the Russians, they have maintained their identity under the leadership of the Tekke. They are a completely sedentary and have lost their tribal distinction.

Bibliography (in addition to works cited in the text): V.V. Barthold, History of the Turkmen people, vol. xi (1916), vol. xii (1919), vol. iii (with Wachtelkonig, in Italian with Re di quaglie and in Spanish with Guion de codornices = "quails' guidon").

Salur is from the same root as the Turkish name salwâ (sälwâ). It is under this name that the quail is mentioned in the Bible (Exod. xvi, 11-13; Num. xi, 31-2; Ps. lxviii, 27; Ps. civ, 40; Wisdom of Solomon, xvi, 2) with regard to the exodus of the Israelites from Egypt to the Promised Land. Lacking provisions on their journey, they were constantly the prey of falconry, from the other hand well-known that the quail is one of the most delicate game birds, much sought after by gourmets and assiduously hunted wherever it may pass by. Its nocturnal flights, sometimes in groups of hundreds, regularly reach the peripheries of the Mediterranean. Thus on the island of Capri, in September, the ground is covered by these birds arriving, to such an extent that, according to Tristram, the bishop, who drew a certain amount of revenue from them, bore the name "bishop of the quails".

In addition to the two names salwâ and sumândâ, the quail bears other appellations, in various regions and in the different local Arabic dialects. In the Near East there is marâsu't, marâsu't al-bar, sumândâ sumândâ, firrî and firrî, and in the Magrib, sumâna, sumâma, mallâha and darrâd. An ancient belief held that the quail would be inevitably struck down by stormy weather, whence its name kâtîl al-na'd "the victim of thunder". In Berber, the names tamettam, tamettam and tiberdûf the numbers for the species each year, by the way, the Turkish name bîldîrgîn is from the same root as the Persian bâldarîn/bîldarîn/buldurîn, to which may be added local names like bâdhnâ, bûdhnâ, gîltâ, kârak, kargîfâk, karkarâk, lârdâ, lûrîda, wulalîq, wurtäjî, wurtak, wutak and wusâm. As well as having succulent meat, the quail, according to al-Damirî, has several specific qualities. Thus its head, buried in a dovecote, will make all parasites flee away, and, burnt and used to fumigate the wood, will free it from all woodworm. If a person whose eyes are affected by rheum carries one of its eyes on his person, he will be cured of his condition. Mixed with saffron, its gall is an excellent unguent for scurfy skin, and its dried and pounded-up dung placed on ulcers will make them disappear. Finally, in falconry, a sick goshawk can be cured by feeding it to quail's liver. The partridge and quail have always been for hunters some of the most sought-after game birds. They were constantly the prey of falconry, from the wrist with the sparrow-hawk and merlin [see Bayzara]. Other methods of capturing quail were and still are very varied. Since it constantly runs along the ground, only flying when forced and hemmed in, lurking in dense herbage and thickets, it is caught by means of a quail-call (saffâra) which imitates the call of the male, and is adorned in French by the onomatopoeic "paye-tes-dettes". In the Magrib, hunters use their flowing burnouses as a net by spreading them over the bushes where quail rest when they arrive after their lengthy migration. They are, at that time, very vulnerable and the episodes related in the Bible set in the time of the exodus of the Israelites through the desert, are easily understandable. At the present time, shooting quail with pointer hounds reduces considerably the numbers of the species each year, but very recently, this has been modified by the commercial rearing of quails.

As well as being the main term for "quail", salwâ is at the same time used for a land-hugging member of the Rallidae family (tîfîlät), the corncrake or land-rail (Crex crex, Crex pratinus), whose mode of life is quite similar to that of the quail, since it frequent similar habitats, keeping to the ground, hiding in thickets, long grass and crops, migrating more or less at the same time and towards the same places, it is everywhere the "companion" of the quail and, moreover, its meat is enjoyed. For all these reasons and, being double the size of the quail, it has acquired the name in French of roi de cailles, likewise in German with Wachtelkönig, in Italian with Re di quaglie and in Spanish with Guion de codornices = "quails' guidon".

SALUR — SALWA
In the Maghrib, it is the ‘quails’ mule’ (baghl al-sammdn) and the ‘slow, lazy one’ (abu l-rakhwa). It is mentioned under sfird, being considered as very cowardly, whence the saying adhan min sfird ‘more cowardly that a corncrake’. Finally, it is remarkable that al-Kazwini mentions neither the ‘quails’ donkey’ (baghl al-abwbl) nor the ‘mother’ of all Semitic languages, as well as the noun al-sammdn‘phony’ for the people who spoke it. This usage seems to be well established at this time, as contemporary dictionaries of the Islamic languages show.

(a) Precursors in the Islamic world.

Some Muslim historians, starting with al-Mas‘udi (d. 345/956), have a syntagm al-kurraj, al-‘arbajj, al-kurraj, 1967, iv, 94-5). The relative adjective sdmiis is used in modern Arabic as a rendition of “Semitic”, “semistique”, etc., thus al-lughat al-sdmiis ‘the Semitic languages.’ Important for the introduction of this notion into the Arabic-speaking world was the Christian Arab novelist and historian DjamP al-baydn (d. 345/956), from whom Zaydan’s book is also dedicated. In his later work Ta’rkh al-lughat al-‘arbajj, 1st ed. Cairo 1905, xii, 22), concerning Kur‘an, x, 39, with Ham as the character involved; the difference in identification is probably the result of an understanding that Ham would be the son properly afraid of the final judgement, rather than Shem.

(A. RIPPIN)
descendants), the Hebrews, and the ancient Arabs. The author also comments on the close relationship between Arabic, Hebrew, and Syrian. I. Yu. Kračkovskij, therefore, did not hesitate to refer to Masʿūdī the conception of a “Semitic” race (Taʾwīḥ al-adab al-dīnghārī, Cairo 1963-5, 182-3; Khalidi, op. cit., 93 and n. 2).

Notions about the relatedness of the several Semitic languages are, however, very sparse, as far as Muslim and Christian authors are concerned, although it stands to reason that, e.g., translators from Syrian into Arabic and specialists on the materia medica, who had to identify the names of drugs in various languages, would be aware of similarities. One of the few Arab grammarians who was interested in languages other than Arabic, Abū Ḥāyān al-Ǧārmānī (d. 745/1344 [q.v.]) wrote a work on the language of the Abyssinians (ḥabash), probably meaning Ethiopian, which has, however, not been preserved (Brockelmann, S II, 136). It is to the credit of the Jewish grammarians in the Islamic realm, who were steeped in all three languages, Hebrew, Arabic, and Aramaic, that the foundation of Semitic studies—though not under that name—has to be placed. The first to propose explicit comparisons, mainly for exegetical purposes, was Yahūdā b. Kurayyā (ca. 900). For further names and literature, see judaeo-arabic, here at IV, 305.

(b) The development of the notion “Semitic” in the West.

The term “Semitic” for a family of related languages was coined by the historian, Biblical scholar, and influential Slavicist August Ludwig (von) Schlözer (1735-1809) who took his inspiration from the Biblical genealogy of Genesis, (see Repertorium für biblische und morgenländische Literatur, viii [1781], 161; note, however, that Johann Christoph Adelung, Mithridates, i, 300, says, without reference, that Johann Gottfried Eichhorn (1752-1827) was the first to use this term). However, the fact that these languages were related had been recognised much earlier in the West (and in the East even before, see above). Guillaume Postel (Guilmimus Postellus) (1510-81), author of the first Western grammar of Classical Arabic (1538 or 1539), wrote comprehensive works on Hebrew, Syriac, Chaldaean, and Arabic, including speculations of a rather mystical nature about their common origin (cf. Fück, Arabisches Studien, 39, 42-3). In the following two-and-a-half centuries, more than three dozen polyglot grammars, dictionaries, and other scholarly linguistic works were published, often covering all of the known Semitic languages (cf., e.g., the title of Bonifazio Finetti, Trattato della lingua Ebraica e sue affini Rabbinica, Caldaica, Syra, Samaritana, Fenice e Punica, Arabica, Aethiopica ed Amharica, Venice 1756) but not infrequently including also other Oriental languages, such as Armenian and Persian (bibliographies in Eichhorn, 403-4, 409-11, 484-5, and Adelung, 303-6). Important for comparative purposes was the four polyglot Bible editions. While all these collections were no doubt in tune with the polythetic Zeitgeist which produced collectanea, encyclopaedias, and other cumulative works in all and sundry fields, the relatedness of the Semitic languages and, in particular, the relationship between Hebrew and Arabic was more and more considered to be important for Biblical exegesis. Typical for this approach is the work of the Leyden Professor Albert Schultens (1686-1750), starting with his Dissertatio theologicphilologic de utilitate virorum in interpretatione varia lingua (1706). Thanks to its indigenous lexicographers, Arabic had, of course, the richest attested vocabulary and was thus the language of choice in the endeavours of elucidating Biblical cruces with recourse to cognates in related languages. However, it created a problem for the philologists in the 18th century, who still believed Hebrew to be the First Language, since Arabic with its case and mood inflection seemed to be rather more archaic. This dilemma was solved in 1788 by Johann Gottfried Hasse, who assumed, like others, that originally Arabic did not have the desinential inflections and that the latter were introduced into the language by Arab grammarians on the basis of Greek models (see, see Grunfest, in Bibl.).

Toward the end of the 18th century and ever-increasingly in the 19th century, Arabic and Semitic studies ceased to be ancillary theology. The great advances made in Indo-European comparative linguistics stimulated comparative Semitics. At the same time, the term “Semitic” was hypostatised to give birth to the term “Semites” which was used to designate not only the Proto-Semites, Ursemien, before they broke up into the various Semitic peoples, but also the totality of the Semitic-speaking tribes and nations. With the growing interest in racial theories, identities of the peoples, and their distribution, became a race with a specific physical, but quite importantly also a mental make-up, most often contrasted with the Indo-European race. The first comparative grammar of the Semitic languages, Ernest Renan’s (1833-92) Histoire général et système comparé des langues semitiques (1853) was an embodiment of both tendencies. His negative characterising of the Semites (who have a knack for monotheism, but a lack of almost all other cultural achievements) was very influential, but did not go unchallenged. Suffice it to mention two works: Daniel (David) Chwolson, Die semitischen Völker, Versuch einer Charakteristik (Berlin 1872), and Theodor Noldeke, Zur Charakteristik der Semiten, in Orientalishe Skizzen (Berlin 1892). The more scholarly linguistic work was carried out by the founding fathers of modern Semitic studies: Franz Praetorius (1847-1927), Theodor Noldeke (18361930), Ignazio Guidi (1844-1935) and William Wright (1830-89). Noldeke and Wright produced comprehensive works on the Semitic languages (see Bibl.). The full harvest of all their work was brought in by Carl Brockelmann (1868-1956) in his monumental Grundriss der vergleichenden Grammatik der semitischen Sprachen, 2 vols., Berlin 1907-13. Though partly dated due to new discoveries and new methodologies, it has not yet been replaced.

Changes in the notion of “Semitic” in recent decades have to do with the clear recognition of the family language as being part of the larger Afroasiatic phylum. See below, section (c).

(c) The Semitic languages. An overview.

The Semitic family of languages has a longer recorded history than any other linguistic group. The main languages and language groups of the family are
reviewed below in the order of their first appearance. Thereafter, the genetic subgrouping of the family and the interrelationships of the various languages are considered.

The first attested Semitic languages are Akkadian and Eblaite, both of which were usually written on clay tablets in the cuneiform script originally developed for the writing of the non-Semitic Sumerian language in southern Iraq. Mesopotamian Akkadian, the language of the Semitic Assyrians and Babylonians of Mesopotamia, is known from tens of thousands of documents in a wide variety of genres, such as myths and epics, letters, legal inscriptions, economic receipts, omens, and mathematical, medical and school texts. Akkadian begins to appear as early as the 26th century B.C., and the scattered documents of the earliest period are collectively referred to simply as Old Akkadian. From the beginning of the second millennium, two principal dialects are recorded: Assyrian, especially in texts from sites along or near the Tigris north of the Luristan-Zab, and Babylonian, in texts from sites mostly to the south of later Baghdad. Scholars further sub-divide both of these dialects chronologically, at roughly 500-year intervals, into Old (2000-1500), Middle (1500-1000), and Neo-Assyrian and Babylonian (1000-600); Assyrian came to an end with the fall of the Assyrian empire near the end of the 7th century, whereas Babylonian continued to be written until the 1st century A.D. (Late Babylonian); the language had, however, probably ceased to be spoken and has been replaced by Aramaic in most of the area long before. For much of the second millennium, Akkadian served as a lingua franca, and Akkadian texts from that period have been recovered from sites across most of the Near East, including Iran, Turkey, Syria, Lebanon, Israel, and Egypt. Eblaite is recorded on clay tablets dated to the 24th-23rd centuries B.C. found recently at the site of Tell Mardikh in Syria (about 60 km/38 miles south of Aleppo); although the writing system is similar to that used for writing Akkadian, there are enough differences in spelling and sign usage that the language remains poorly understood; it appears, however, to be a close relative, or possibly even a dialect, of Akkadian.

Texts in Ugaritic, the language of the important ancient city of Ugarit (modern Ras Shamra near Latakia), date from the 14th-13th centuries B.C. Like Akkadian, Ugaritic was written on clay tablets in cuneiform, but whereas Akkadian cuneiform signs depict whole words (logograms) or syllables (i.e., comprise a syllabary), Ugaritic cuneiform is alphabetic, with one sign for each of the 27 consonants, plus three extras added at the end, two for apleh (hamza) with the vowels i and u (the original apleh, at the beginning of the alphabet, being used only for /a/ and /u/) and another to write certain words with /s/. The order of the Ugaritic alphabet, which is generally considered to be the original order, from which the Phoenician-Hebrew-Aramaic and, ultimately, the Arabic, are derived, is as follows: b g h d hw z h y k l m n s t p q r g t k la u s. Some 1300 Ugaritic texts have been published thus far; most are administrative lists, but there are also many myths, rituals, omen texts, and letters.

The Canaanite group of languages, which includes Phoenician, Hebrew, and several poorly-attested dialects, begins to appear with the first identifiable Phoenician texts in about 1000 B.C., although short inscriptions that are less easily classified linguistically, in pictographic precursors to the Phoenician alphabet, are attested for perhaps five or six centuries before that date (in graffiti in Egyptian copper mines in the Sinai and in names on bronze arrowheads). Phoenician texts, especially royal inscriptions, are known from the ancient city-states of Byblos, Tyre and Sidon, as well as other sites. The Phoenician dialect of texts from the North African Tyrian colony of Carthage (Phoenician garthadait "new-town"), and from Carthage's own colonies all around the Mediterranean, is referred to as Punic. The 22-letter Phoenician alphabet was borrowed and adapted for the writing of numerous other languages, including Hebrew, Aramaic (and thence for Arabic), and Greek and thence for Etruscan and Latin. Hebrew is first attested archaeologically in inscriptions of the 10th century B.C., but it is likely that parts of the Hebrew Bible derive from a century or two earlier. Besides the biblical texts and numerous inscriptions from the biblical period, Hebrew was used for a vast literature in the centuries immediately thereafter, including texts such as the Dead Sea Scrolls (paradigmatic) and the Mishna, and in the mediaeval period as well. Having died out as a spoken language, probably at some time around the turn of the era, Hebrew was revived in the last century and is thriving as the national language of modern Israel. Other Canaanite dialects, known only from a few inscriptions dating from the 9th to the 6th centuries B.C., include Moabite, Ammonite, and Edomite (all from sites in modern Jordan and southern Israel).

Aramaic is first attested in inscriptions found in Syria, Iraq, and Israel dating to the 9th and 8th centuries B.C. During the Persian empire, Aramaic served as an official language, a factor that helped both to standardise the language and to spread its common use: texts from this period are found as far afield as Elephantine in Egypt. The Aramaic of the biblical book of Ezra is also representative of this imperial dialect. After the Achaemenid period the use of Aramaic continued to be very widespread, but dialectal differences became more and more apparent. The period of Middle Aramaic, from the 3rd century B.C. to the 2nd century A.D., comprises texts in the Hatran, Nabataean, Palmyrene and Old Syriac dialects, as well as the earliest Jewish Aramaic targums (translations) of the Bible and other writings. In Late Aramaic (the 1st-7th centuries A.D.), dialectal distinctions become still more pronounced; in addition to Syriac, with its vast classical literature, scholars generally recognise Late Eastern Aramaic, consisting of Babylonian Jewish Aramaic (the language of the Babylonian Talmud) and Mandaic, and Late Western Aramaic, consisting of three geographical/religious dialects: Galilean or Jewish Palestinian Aramaic (the language of the Palestinian Talmud and Mandaic), Syriac or Syriac-Aramaic, and Jacobite or Christian Palestinian Aramaic (Palestinian Syriac). Although largely displaced by the spread of Arabic, Aramaic has continued to be spoken until the present day, by Muslims and Christians in three small towns near northeast Damascus (Ma’alula, Djubb’adin, and Bakh’aa), and by Jacobite Christians in a dialect cluster in southeastern Turkey (Turoyo), by mostly Nestorian Christians and Jews in the Kurdistan area (northwestern Neo-Aramaic or "Neo-Syriac"), and by the gnostic Mandaeans in the region of Iraq, Iran and Turkey (Neo-Mandaic); many speakers of Neo-Aramaic dialects have emigrated from the Middle East.

From the 6th century B.C. until the 5th century A.D., there are attested thousands of inscriptions in...
several dialects referred to collectively as Old (or, Epigraphic) South Arabian. As the name implies, most of these inscriptions have been discovered in the southern Arabian peninsula. The best-attested dialect is Sabaic; the others are Minaic, Qatabanian and Hadramitic. The texts are written in an alphabet whose letter shapes and order differ significantly from those of the Phoenician alphabet and its descendants and which served as the basis of the Ethiopian script.

The alphabet preserves all of the consonants of Common Semitic, one more than does Arabic (an additional /l/). Although the Old South Arabian dialects share a number of linguistic features with Arabic, such as the use of broken plurals (and this to an even greater extent than classical Arabic), they also clearly have a number of important traits in common with the Ethiopian Semitic languages.

The closest linguistic relatives of classical Arabic are a group of inscriptive dialects subsumed under the term Old (or, Early) North Arabic, including Thamudic, Dedanite, Lihyanite, Hasaean and Safaitic, attested from about the 6th century B.C. to the 4th century A.D. Written in scripts derived from the Old South Arabic alphabet, these texts are found especially in central and northern Arabia as well as in southern Syria. It is out of the linguistic milieu of these and related dialects that classical Arabic emerged, although the written medium was no longer the Old South Arabian alphabet but rather a modified version of the Nabataean Aramaic script.

Ethiopian Semitic is first attested in inscriptions from the 4th century A.D. The earliest attested language is Ge’ez, originally the language of Aksum, which is the language of the Coptic Christian church. The Semitic languages are generally held to constitute one branch of a larger linguistic entity now usually called Afroasiatic, although the earlier term Hamito-Semitic is still preferred by some scholars. Within Afroasiatic the language groups most closely related to Semitic are Egyptian and Berber. Classical Egyptian, attested from about 3300 B.C. until the 5th century A.D., was written in hieroglyphic, hieratic, and demotic scripts; it was continued in dialects of Coptic, which were written in a modified form of the Greek alphabet and probably spoken until the 5th century A.D. (and still in use as the liturgical language of the Coptic Christian church). The modern Berber languages, such as Tagelhit, Tamazight, Kabyle and Tuareg, are spoken by Muslims; they exist as linguistic islands in a sea of Arabic across north Africa from Egypt to Mauritania [see BERBERS.]. Other branches of the Afroasiatic phylum are the Cushitic languages of Ethiopia, Somalia and Kenya, such as Oromo, Somali, Sidamo, Awaw and Beja; the Edomite peoples of southwestern Arabia (parts of modern Yemen and western Oman); and the Edomites, attested from about 800 B.C. until the 15th century A.D. (and still in use as the liturgical language of the Edomites of the Christian church). Several other languages are grouped together as South Semitic, primarily on the basis of their common usage of pattern replacement for noun plurals. Some examples: Sabaic (Old South Arabian) has a bisyllabic base with a geminated medial radical: takabbir “you (will) bury”; tarrudu (< *yatrudu) “they (m) drove away” (cf. Arabic lam takbir, lam ya’trad). The imperfective form, corresponding to Arabic yaf’alu, has a bisyllabic base with a gapped medial vowel: takabbir “you (will) bury”; tarrudu “they (will) drive away”. There is a suffix conjugation corresponding formally to the primary form of the perfective verb as a prefix-conjugation, as in takbūr “you (ms) were buried”; itarrud “they (m) were driven away” (tarr(y) “driven away”), vs. Arabic kabāra “you were buried” and tadāra “they (m) drove away”. It is the innovative development of the suffix-conjugation into an active perfective verb, and the concomitant relegation of the apocopate prefix-conjugation (yaf’al) to secondary usage, that set the rest of the languages (West-Semitic) apart from Akkad.

The Semitic languages are generally held to constitute one branch of a larger linguistic entity now usually called Afroasiatic, although the earlier term Hamito-Semitic is still preferred by some scholars. Within Afroasiatic the language groups most closely related to Semitic are Egyptian and Berber. Classical Egyptian, attested from about 3300 B.C. until the 5th century A.D., was written in hieroglyphic, hieratic, and demotic scripts; it was continued in dialects of Coptic, which were written in a modified form of the Greek alphabet and probably spoken until the 5th century A.D. (and still in use as the liturgical language of the Coptic Christian church). The modern Berber languages, such as Tagelhit, Tamazight, Kabyle and Tuareg, are spoken by Muslims; they exist as linguistic islands in a sea of Arabic across north Africa from Egypt to Mauritania [see BERBERS.]. Other branches of the Afroasiatic phylum are the Cushitic languages of Ethiopia, Somalia and Kenya, such as Oromo, Somali, Sidamo, Awaw and Beja; the Edomite peoples of southwestern Arabia (parts of modern Yemen and western Oman); and the Edomites, attested from about 800 B.C. until the 15th century A.D. (and still in use as the liturgical language of the Edomites of the Christian church). Several other languages are grouped together as South Semitic, primarily on the basis of their common usage of pattern replacement for noun plurals. Some examples: Sabaic (Old South Arabian) has a bisyllabic base with a geminated medial radical: takabbir “you (will) bury”; tarrudu “they (m) were driven away” (tarr(y) “driven away”), vs. Arabic kabāra “you were buried” and tadāra “they (m) drove away”. It is the innovative development of the suffix-conjugation into an active perfective verb, and the concomitant relegation of the apocopate prefix-conjugation (yaf’al) to secondary usage, that set the rest of the languages (West-Semitic) apart from Akkad.

Among the West-Semitic languages, it has been traditional to group Arabic, the Old and Modern South Arabian languages, and Ethiopian Semitic together as South-Semitic, primarily on the basis of their common usage of pattern replacement for noun plurals. Some examples: Sabaic (Old South Arabian) has a bisyllabic base with a geminated medial radical: takabbir “you (will) bury”; tarrudu “they (m) were driven away” (tarr(y) “driven away”), vs. Arabic kabāra “you were buried” and tadāra “they (m) drove away”. It is the innovative development of the suffix-conjugation into an active perfective verb, and the concomitant relegation of the apocopate prefix-conjugation (yaf’al) to secondary usage, that set the rest of the languages (West-Semitic) apart from Akkad.

for example, that Ethiopic and the Modern South Arabian languages share the bisyllabic base of the imperfective verb with Akkadian, as in Ge'ez takkib and Mehri taḥak, whereas Arabic shares with the Northwest Semitic languages the loss of that form and the development of a new form in its place, as in Arabic tābīrūn (a form that is obscured in Hebrew and Aramaic by the loss of short final vowels; compare, however, Hebrew yāḵūm < "yāḵūmu "he will arise" and yāḵūm < "yāḵūm "may he arise"), ʿaṭlī < "yāṭāli "he ascends" and ʿaṭlī < "yāṭāli "may he ascend"). By this criterion, we may classify Modern South Arabian and Ethiopic together as South Semitic and Arabic, Aramaic, and Canaanite together as Central Semitic. Thus it is the position of Arabic within the Semitic family that is least certain. (The position of the Old South Arabian languages in the more recent classification is also unclear; a recent study showing that the imperfective verb was probably not bisyllabic suggests that they belong in Central Semitic.)

Ritter) SÂM, legendary ruler of Sîstân [q.v.] and vassal of the Kayānids, the epic kings of Iran, was, according to al-Ṭabārî and Firdawsi, the son of Nārimān, the father of Zâl-Dastân and the grandfather of Rustam [q.v.]. This pedigree is the outcome of a long development spanning the entire history of the Iranian epic. In the Avesta, Sâmā is the name of a clan to which Thîrîta, "the third man who pressed the Haoma", belonged as well as his sons UrvâKhâshya and Kârsâspâ (Yasnâ 9. 10). Kârsâspâ (Persian Kârshâsp or Garshâsp), a formidable fighter against dragons and other evil powers, armed with a mace, is often described as namûnâ ("the most mighty") (Yasnâ 11. 9). The name of the clan became interchanged with his personal name, while the epithet was interpreted as the name of his father (in Persian Nârimân, or Nîram). Traces of this stage can still be found in genealogies mentioned by Islamic writers (see e.g. al-Birūnī, al-Ṭabârî al-bâkîyâ, 104; "wa-Kârshâsp wa-huwa Sâm b. Nârimân..."); cf. Maťûdî, Maťûdî, ed. Ch. Pellat, i, 273; "Kûsîf b. Nârimân..."). However, in Sasanian times, Kârshâsp and Sâm already began to be taken as the names of separate persons. Together with Thîrîta or Aḏār (Aramaicised to Aḏrà) and Nârimân, they were fitted into a pedigree of the Kayānids, which is mentioned with many variations in Zoroastrian and Islamic sources (cf., Christensen, Kayânides, 130-1).

In the Pahlavi books, notably in Bundahîshn and Menînâ i khrad, the original identity of Kârshâsp and Sâm is still evident. Like the former, Sâm plays a part in eschatological events: he is said to have died but to rest in a hidden place, guarded by 99,999 spirits (fâwâdshâk), until the day when he will be summoned to fight the demon Ažî Dâhîka (in Persian Dabrhâk), who near the end of Time will escape from his captivity in the mountain Dâmâwâd [q.v.]. Further analogies are the fights against several monsters attributed to Sâm (Christensen, op. cit. 59-60, 101).

In the historical and epic sources of the Islamic period, Gârshâsp and Sâm (the form Sâm used by al-Ṭabârî is merely an orthographic error due to the ambiguity of the Pahlavi script) are usually kept separate, although they mostly belong to the same lineage, viz. the house of the vassal kings of Sîstân and Zâbulâstân who act as dîvân-pahlavân ("chief champion") to the kings of Iran. They are sometimes contemporaries, e.g. when they are named in the Shâh-nâmâ among the principal warriors of the army of Iran (i, Fâridûn 692, 792). More often, however, Garshâsp is a remote ancestor of Sâm's. According to the 6th/12th century chronicle Mûdâjmâl al-tawwârîkh, the career of Sâm began during the reign of Fâridûn. After the death of his father Nârimân, he was sent out on expeditions to several parts of the world (cf. Spiegel, 248-50). In the Shâh-nâmâ, the story of his family completely fills the account of Manûzîr's reign. As the principal warrior of the realm, Sâm replies to the speech delivered by this king at his accession to the throne (i, Manûzîr, 39 ff.), and restores order in the empire after the succession of the unjust king Nawdâr (i, Nawdâr, 22 ff.). On the whole, he is less prominent in Firdawsi's story than his son and grandson, being away most of the time on a campaign against the Gûrsârân (the "wolf-like people", living in a country by the same name) and rebellious warriors (gûrdân) in Mâzândârân. He becomes a full epic character only in the account of the birth of Zâl. Sâm is portrayed as outstandingly brave and determined to sacrifice his son rather than face the scorn of his peers when the child is born with grey hair. However, he equally shows the courage of repentance after he learns of the care bestowed on the abandoned child by the miraculous bird Simûrg [q.v.] (i, Manûzîr, 41 ff.). He supports his son in the matter of Zâl's courtship with Rûdâba, the daughter of the king of Kâbul, in spite of his disapproval of a union with a descendant of Dabrhâk. An echo of the Avestan legend of Kârsâspâ can be heard in a letter written by Sâm to the king of Iran, relating his struggle with a dragon who had emerged from the river Kâghaf (i, Manûzîr, 993 ff.). A parallel story, situated in Mâzândârân, is told by Ibn Isfândîyar. Sâm was still alive when Rustam was born (i, Manûzîr, 1514). His death, mentioned in the reign of king Nawdâr (i, Nawdâr, 127), incited the Tûrântâns to invade Iran and Sîstân. The famous name of Sâm, with which the nation won the nickname yâk-zâkhâmi ("with one stroke"), was inherited by Rustam.

In the Garshâsp-nâmâ, Asadî Tûsî [q.v.] tells about the birth of Sâm as a descendant of Garshâsp, shortly before the latter's death, and the prediction of his future greatness. From a latter, but not precisely definable period, dates a maṯnawî called Sâm-nâmâ,
which is preserved in redactions of varying lengths. The poem relates the adventures of Sam, son of Naftūn, in China, where he pretends to the hand of Parthūkū, the daughter of the king Faghūrū. Actually, the poem is a forgery based almost entirely on the romance Ḥumayū wa Ḥumayyūn by Khādūjī [q.v.]. Kamāl al-Dīn Kirmānī (689-753/1290-1352), for which not only the entire plot of the latter poem was copied but also its lines stolen. The anonymous plagiarist merely changed the names of the protagonists and added some episodes of a fairy-tale nature.

On the Sām-nāma, see F. Spiegel, Die Sage von Sām und das Sām-nāme, in ZDMG, iii (1849), 245-61 (with a synopsis of the story); Ch. Rieu, Catalogue of the Persian MSS. in the British Museum, London 1881, ii, 543-4; H. Eshê, in Deutsche Literaturzeitung, 1881, no. 45, 1736; idem, in GFRφ, ii, 234-5; idem, Catalogue of the Persian MSS. in the India Office Library, London 1903, no. 1235; Dabīḥ Allāh Šāfā, Hamāsāsārāt dar Īrān, 1 Tehran 1352 sh./1973, 335-40. (J.T.P. de Bruijn)

SĀM MĪRZĀ, Abū Naṣr, Persian poet and biographer of poets, with the poetical name Sāmī [q.v.], known for his ṭadhimān of contemporary poets, the Tāḥmāsp-yi Sāmī. He was the third son of Shah Ismāʾīl I [q.v.].
1. Biography.

Shāh Ismāʾīl (906-31/1501-24) and his eldest son and successor Tahmāsp I (931-84/1524-76) followed the practice of preparing the princes of the ruling family, already at an early age, for the direction of state affairs by appointing them to the post of governor, under the guidance of an experienced amīr of the Khāzānān (see F. Spiegel, Introd., 19). For Sam Mīrza does not think nothing to do with the devastating revolt of his elder brother Alkās Mīrza (953-5/157-9 [q.v.]). He apparently lived for his literary studies, being occupied with his Tāḥfā at least since 957/1550. It was finished at the latest in 968/1560-1 (see Humayūn-Farrukh, Introd. to the Tāḥfā, 17 ff.). In 969/1561-2 Sām Mīrza fell into disgrace for a second time. He apparently came under suspicion of political intrigues, for he was interred with two sons of his brother Alkās Mīrza in the fortress of Khakah, the place of confinement of political delinquents. He remained there until his death in an earthquake in 974/1566-7 (Tāḥbīd, Dānīḵmandan, 173 bis; the date is confirmed by the chronogram dawlat-i Tāḥmāsp shud bāb). 2. Literary work.

Sām Mīrza has immorlised himself in literary history with his Tāḥfā-yi Sāmī, the summa of his involvement over many years with contemporary Persian poetry and its poets, contained in 714 short biographies of all those who had distinguished themselves in this field since Shāh Ismāʾīl I’s coming to power. However, the curricula vitae themselves are only dealt with in very rare cases. The biographies rather give information about a series of points, viz.: name — origin — working place — function — education — training — art and artistic specialisation — works — career — eventually, end of life, and paradigmatic quotation of at least one verse. They are, however, rarely all dealt with; occasionally one or the other is missing. Not even the works or the favourite genres of poetry are noted down regularly, and a qualification is often also left out. Occasionally, a small scene illustrates a point and the author shows a preference for the piquant and the subtle. But two points are never missing, origin (scene of activity) and quotation of verses, the latter being often reduced to one single verse, which then is almost always the matla′ of a ghazal [q.v.]. This is not by accident, for the author considers poetry as the fruit of love (Tāḥfā-yi Sāmī, 2). In the separate chapters the place of origin often serves for an associative classification (cf. Tāḥfā-yi Sāmī, Introd., 19). For Sām Mīrza does not think in a centralistic way but along lines of political integration; every place in the realm of the Safawids counts, and the total value of Persian poetry emerges only from the totality of all the places where it is practised. In this context, still another point must be observed. It is remarkable how often the author mentions the occupation or profession of a poet or of his father. The more simple trades, such as those of a craftsman or a trader, attract his particular interest. He is apparently concerned with the spread and
embedding of poetry in all social levels, from the craftsmen to the princess (cf. Humayun-Farrukh, *Tuhfa-yi Sami,* Intro., 6-7).

The arrangement of the work seems to confirm this. It consists of seven chapters (sahifas), in which the poets with a main occupation and those with an additional function are classified as follows. The first chapter is reserved for the princes of the period. It starts with Shāh Isma'īl and his descendants, but place is also devoted to the sworn enemies of the dynasty, even for the Ūbayd Allāh Khān, with whom the author was in hostile contact at Harāt itself. The second chapter deals with the most prominent poets of the second one. The sixth chapter deals with Turkish-speaking poets who tried their hand at Persian verses too. The seventh and last chapter is devoted to the poetasters; it turns out to be particularly amusing and instructive (Humayun-Farrukh, Intro., 22-B).

Sām Mīrzā was prompted to compose his *Tuhfa* by `Alī Shīr Nawā'ī's *Magālis al-nafā'ī* (see mīr `alī shīr nawā'ī), which he must have come to know at Harāt during the first period of his governorship. At that time his first lālā, Dūrmīsh Khān, had the work translated into Persian (Lātā'īf-nāma, 3). Not only the form of the selective and accentuated short biographies may have been inspired by this work, but also the motivation. Like his predecessor, Sām Mīrzā wants to save the many poets of his time from oblivion. However, the distinction from Nawā'ī is that Sām Mīrzā not only equals their delicacy of expression with that of the ancestors—as does Nawā'ī—but appreciates it even more highly (*Tuhfa*, 3-4). While Nawā'ī exults in the idea according to which Khurāṣānīs, with its capital Harāt, had reached the highest blossoming of Persian culture under its lord Husayn Baykara, and concentrates his observation on the Khūrāsānī poets, Sām Mīrzā's point is rather that the overall picture of Safawī poetry. Besides—and this applies in common with Nawā'ī—he only rarely mentions his relations with the subjects of his biographies, though he must have owed the great majority of his informations to personal relations (for the question of his sources, see M.I. Kazi, *Sam Mirza*, 86-7). Ultimately, the high value of his book lies in this point. Without it, we would not even know the names of many of the poets.

About the presentation itself it can be remarked that the "biography" does not depend only on the number of the points treated and on the eventual inserted stories, or on the quotations of verses, but above all on the linguistic presentation. This goes from a concise, pragmatic turn of phrase to a highly-developed, manneristic one with rhyming prose and metaphorical expressions. Sām Mīrzā likes imaginative turns of phrase in particular when mentioning the end of life. He permits himself sporadically to be carried away by the name of a poet to a metaphora *continuata* in other accounts, as, for instance, the case of Badr al-Dīn Hilālī [*q.v.*], who often visited the gifted prince at Harāt (*Tuhfa*, no. 266). In general, a personal engagement with somebody, or also the latter's high standing incited him to a more intensive use of images.

Numerous statements of a literary-critical character are spread throughout the entire book; their critical clouds gather in the seventh sahīfah. In their totality, they point to the unusually trained and sharpened feeling of the author for stylistic nuances and quality. This is not only expressed in critical remarks on singular verses, which go as far as to suggest corrections (e.g. no. 429), but above all in the choice of the quotations of verses. Sām Mīrzā is less carried away by the refined, poetical play of ingenuity of the Timurīd period than by the art of subtly bending known motifs in order to give them a permanent garment in a sāhī-i muntāmī (inimitably beautiful elegance). In this respect, too, he distinguishes himself from Nawā'ī. Nothing might show this more clearly than the fact that the Timurīd high tightrope of exquisite poetical acrobatics of thoughts, the logograph (*mu'āmmā*), is substantially less frequent in the *Tuhfa* than it is in the *Magālis*. Unfortunately, Sām Mīrzā's terminological palette does not correspond with the fullness and differentiation of his aesthetic formation. Qualifications like *mātin* (firm), *pur zūr* (powerful), *rangīn* (colourful), *ab-dār* (brilliant), *ba-lāghī* (with good taste), *pur sūz u dār* (passionate), etc. might perhaps be better understood and described if all the verses thus estimated were gathered and those which are equally qualified were compared with one another. This would be all the more a desideratum since Sām Mīrzā, instead of a characteristic, often satisfies himself with a quotation of a verse and leaves it to the reader to formulate a judgement. It is the more regrettable that Sām Mīrzā's *Dīsūn*, of which Tarbiyat says that he once saw a manuscript with ca. 6,000 verses without any further indication, however, has not yet been published. Besides a *ghazal*, quoted by Tarbiyat (*Dānishmandān, 175 bis f.*) from a historical work (*Takmilat al-ākhbār*), we possess only the quotations from his own work by the author himself at the end of the *Tuhfa* (*377-80*), a *mankabat* *kaṣida* on *`Ali* with an introductory description of spring, a *rubāʾi* and four isolated verses (*matālīf*). The latter, in particular, correspond, in elegance and pointedness, to the ideal of the sāhī-i muntāmī to which Sām Mīrzā adhered, while the *kaṣida* in its turn is completely free of any complexity of thoughts.

**Bibliography:**

Introd. to his edition, (c) Sources of Sām Mīrzā. To those mentioned by Kazi and Humāyūn-Farrūkh should be added the ed. of the Persian tr. of Nahw, Muḥīt al-nawvī, the Lutāy-nāma by Sūlān Muḥīt b. Fakhrī. It was made by ʿA.A. Hikmat, Tehran 1363 ʿih. (B. Reinert)

Sāmā3 (A.), literally "the upper part of anything, the sky, the heavens".

I. As a cosmological and theological term. According to Arabic lexicography (see Lane, s.v.), the word sāmā3 is derived from the root s-m-t (= being or becoming high, elevated). As a noun, it may be used for anything that is "the higher or the highest" part of any physical or metaphysical reality, but it generally denotes the cosmological and theological entity which in English, with equal vagueness, is described as "heaven" or "sky". Fittingly, sāmā3 is predominantly masculine, but it can be masculine or feminine; it is used as a singular or as a plural, as in the Kurān, II, 27, for the seven heavens; however, even then numerical plurality is not necessarily implied since the plural can be understood as a pluralis amparis or as denoting the overwhelming greatness of heaven. But sāmā3 can also be expanded into the plural form sāmātuWS.

For the ancient Arabs, as also for the people of the surrounding countries, sāmā3, in the most common meaning of "heaven", was not primarily associated with the stars, but it was first the location for the "high-flying clouds". In poetical language it even appears to have been identified with the clouds, the provider of rain, or even rain itself. Thus the Arabs could think of themselves as the Banū āl-sāmā3 (= "The sons of the water of heaven"). Hence "heaven" from early on did not only represent a physical and cosmological entity but was linked to the ultimate hopes of mankind for a continued and happy existence on earth as it knew it. Physical highness in the cosmological world view corresponds to the metaphysical loftiness of spiritual aspiration, and the human mind may even be tempered by the identification of heaven with God Almighty. Considering the far-reaching spectrum of aspects which the term "heaven" displays before us, its dictionary meaning alone cannot sufficiently disclose the underlying cosmological and theological concepts; and for the Arabic dictionary this resigned observation imposes itself especially also in view of the profound changes which have provided the fundamental course of Islam's dynamic cultural expansion, when the intellectual heritage of earlier cultures in the Middle East and in North Africa was adopted.

As the foreign vocabulary employed in the Kurān demonstrates (in our context the word FarWSaus for the heavenly garden or Paradise may be explicitly mentioned), the exchange of ideas and theories about heaven and earth must have pre-dated the mission of the Prophet. But with the Kurānic texts a new beginning was made; above all, in place of particularistic and of merely local idolatry, the monotheistic sovereignty of God over the whole universe as the Rabb al-ʿAamiln (I, 2) became the centre of the new orientation. As in almost all other provinces of the human mind, the cosmological and theological views of heaven and earth proposed by the revealed book became the formative world model for Muslim culture up to our days. This world view no doubt has been modified by Islamic thought along the lines of its expanding scientific horizons. But with the unceasing recitation of the Kurānic texts the physical as well as the spiritual notions of heaven and earth were constantly impressed on the minds of the faithful.

It started with the story of revelation itself, the prophetic call experienced in a cosmic vision that filled the whole space between heaven and earth: "This is naught but a revelation revealed, taught him by one terrible power, very strong; he stood poised, being on the higher horizon, then drew near, hung, two bows'-length away, or nearer, then revealed to his servant that he revealed." (LIJJ, 5). "Higher horizon" is here the translation of al-ʿuyf al-ʿalā, which may be understood as a synonym of heaven joining the earth; hence a heaven that does not remain far removed from the world, the abode of mankind, but which approaches man in a divine communication. Such dividing line of the universe(s) and earth(s) as the horizon may appear to be sharply drawn in the Arabic speech, but they are never absolutes. It is the bi-polar consequence of the Kurānic theology of creation that the division of heaven and earth is God's work, and thus also their ultimate union: "...the heavens and the earth were a mass all sewn up, and then then We unstitched them and of water fashioned every living thing." (XXI, 31).

Heaven, in the singular as well as in the plural, occurs over 500 times in the Kurān. But its description is surprisingly meagre; the communication neither of astronomical nor of apocryphal knowledge is intended, although heaven is also associated with the signs of the Zodiac (XXXV, 1), the stars, the planets, and although the heavenly journey of the Prophet (XVII, 1) could have been the best occasion for a detailed description, as can be observed in later traditions. In most cases, however, heaven merely serves as reference point for God's greatness, which is above all beings in heaven and earth. Thus the central message is that God has created the heavens and the earths (LXXV, 12: "It is God who created seven heavens, and of earths their like"), that He knows whatever exists in whatever form, and that all beings in heaven as well as on earth belong to Him—hence absolute monotheism expanded over the whole cosmos. The cosmological models which may have been alluded to in the revealed texts would then be mere figures of speech, in which the prophetic message of God's absolute rule found its adequate expression.

But the theological interpretation of creation did not extinguish human curiosity about the physical nature of the universe. The Kurānic texts about heaven and earth were not easily understood; they provided only the most general ideas. As far as we can gather from the earliest sources preserved, Kurān readers with much curiosity, and some exposure to pre-Islamic literatures, soon offered explanations of the enigmatic and fragmentary texts on the cosmos. Similarly, the earliest commentators from whom we have at least some fragmentary explanations of Kurānic texts, often give brief answers to essentially physical questions about the heavens and what happened there in them. The questions as the dynamic cause of the star movements in their spheres were discussed, and the answers came surprisingly close to what in later scholasticism was described as the theory of "impetus". But, in spite of such rare elements of primitive astrophysical teachings, heaven for the traditional scholar of Islam remained closely associated with rain, wind, ice, snow, and primarily with vegetation. It is a treasure or storage for such meteorological phenomena (LXXIII, 7). They were often also enclosed behind strong dams and safe doors.

Mudjahid b. Ḍjabr (d. 104/722) was one of those early commentators. In an unpublished cosmographical manuscript (Heidelberg Cod. Or. 317, fol. 100a-b), two remarkable diagrams of the various
heavens and earths are preserved (which may, however, be only later additions), possibly illustrating his cosmological model of seven earths under a dome-like structure of seven heavens.

In several other sources, a systematic arrangement of these fourteen stages, neatly separated by an equal number of interspaces measuring 500 “years”, underscores their physical nature, which otherwise might be too easily transposed into the psychological realm of types and archetypes, if not into that of ancient mythology. For the traditionalists no doubt derived deep religious significance from the heavens of Near Eastern mythology. Thus the most mysterious arrangement of cosmic levels, and precisely for this reason certainly not a mere invention, starts with God’s throne being supported by eight huge ibexes (awāl) of the cosmic dimension of 500 years; they stand on a sea as deep as the distance from earth to heaven; and only below these mysterious cosmic beings the seven heavens are spanned out, one below the other. Finally, below all those heavens, and sometimes clearly separated from them by a celestial ocean, there follows a structure of seven earths. These are the main features of the traditional cosmology of Islam, which is further modified from one source to the other; the celestial ocean e.g. which is usually located in heavenly regions, may even be placed under the lowest earth. Common to all these models seems to be that the heavens are vaulted over the earths like a dome-structure, while the earths are arranged in horizontal levels, like a block with different storeys, as the above diagrams indicate. Heavens and earths cannot be clearly separated, as C. Houtman already noticed in his thorough investigation on Der Himmel im alten Testament (see Bibl.). The theological or mythological roots become evident when we see that the seven earths in the older traditional texts are serving as the gradual stages of hell, in particular the store-houses of the various torture instruments: destructive winds, qānim, brimstones of hell-fire, scorpions, vipers, and eventually the devils. This rather mythological structure—and that is its unexpected historical function—was in later texts apparently used to illustrate the geographical division of our globe.

Between the heavens and the earths, there is more often not the clear-cut division that had been axiomatically established in pre-Islamic philosophy, where the supra-lunar world was thought to remain eternally unchanged and having circular movements only. Even the heavens in traditional cosmology are described as being of material nature. Thus most commonly the lowest one is identified with the firmly-enclosed water of the celestial ocean, and the higher ones consist of different substances, such as white marble, iron, copper, silver, gold and rubies, while the space above them is filled with “deserts of light”. The traditional authority Salmān al-Fārāsi even had names for the seven heavens and associated precious stones and metals with them. In this form, the cosmology of the seven heavens was especially developed by The Book of Secrets of Enoch, which may have originated within an Islamic milieu. In the estimation of R.H. Charles, this book is “the most elaborate account of the seven heavens that exists in any writing or in any language.” When he interprets this account as an example of “growing ethical consciousness” within apocryphal literature (p. XXXIX), he gives us the decisive clue for a valid evaluation: not the teaching of any objective cosmological knowledge is intended, but man’s ethical and religious concerns are to be extended to the “highest and most remote reaches of creation.

Since this whole cosmological system of seven heavens and seven earths had entered such authoritative texts as the Kurʾān and Hadīth, it could never henceforth be totally discarded. When the Hellenistic models of the cosmos had become known through numerous translations, a synthesis of the traditional and the translated cosmological notions was tried by some authors. As a result “the heavens” often were simply identified with “the spheres” (= qāb) [see Falak]. But there were important differences. The new world-model of the traditional sources, all the stars and planets connected with the lowest heaven, while in the later models the fixed stars were invariably distinguished from the planets, for which at least one sphere each was reserved; or the sun, in traditional cosmology, was not linked to its sphere, but was said to pass through all heavens as it completed its (yearly?) course, and finally would reach the foundations of God’s throne.

The brief and humble explanations of the Kurʾānic text by the early commentators were soon followed by penetrating speculations of the systematic theologians. The often enigmatic references to such cosmological and theological entities as heaven (or the heavens), the stars, meteorological phenomena, and the earth as being blessed by such heavenly gifts as light, clouds, winds and rain, stimulated their highly speculative minds and drove them to remarkable attempts at finding satisfactory answers to such questions as God’s place in the universe: Did He nearly and physically reside in the heavens, or one particular heaven, or was He so far removed from all His creations that He could have no real relationship to His creatures? But if His transcendence was emphatically enunciated beyond all limits, how could this God still have revealed His will and His wisdom to the Prophet and all mankind, how could His creatures still hope to have access to Him and in prayer attract His attention when they were in need? Among the numerous cosmological theories discussed by the muta’akalimīn and the free-minded intellectuals in the early Muslim community, we may concentrate on the thorny problem of God’s physical presence in this universe. Was He sitting on His throne in highest heaven, or keeping infinitely above all heavens and all regions on and below earth, or was His presence in His creation so that not only the heavens, but also the earth, and (cf. pantheistic monism)? Well before Aristotle’s speculations about the “Unmoved Mover (or Movers)” became known in Arabic philosophical circles, the heretic thinker Qīqām b. Sāfāwān (executed in 129/746 [q.v.]) was accused by traditional scholars of having deviated from the explicit teachings of the Kurʾān by denying God’s sitting on His throne. Qīqām and his followers were apparently especially eager to emphasise the infinity and ubiquity of the Eternal, without allowing His image to be tarnished by anthropomorphic conceptions. But the defenders of orthodoxy were concerned that such a rationalist commixture of the Creator with His creatures might eliminate all distinctions and obscure the personal presence of God Almighty in the universe; thus they insisted that the Kurʾānic texts should be understood literally, and the physical reality of the throne maintained.

Throne (al-ʿargh) and footstool (al-kurs) are closely connected with God’s place in the universe, and they are essential conceptions for the “theology of the Kurʾān” (as far as there is one); God is emphatically called “the Lord of the Mighty Throne” (IX, 129), and this “Throne comprises the heavens and earth; the preserving of them oppresses Him not; He is the
All-High, the All-Glorious’ (II, 255). These texts, certainly in the circles of victorious traditional orthodoxy, were generally understood quite concretely, not merely as metaphorical assertions about God’s universal rule. Throne and footstool were placed above the heavens and the earths, but they were, however, of the same concrete reality. Thus they can be measured together with them, and they are conceived as being in physical contact with each other and with the lower, physical parts of the world. As all reality was fashioned out of the four elements water, wind, light, and darkness, the throne was created out of God’s light, or it is said to have been made out of a red hyacinth (Sa’d al-Ta’i), or again of a green emerald (Hammâd). The footstool is said to be attached to God’s throne, or to be standing in front of it. The curious fact that a certain creaking sound, which the Prophet was able to hear (see al-Tabarî, Tafsîr, on XXI, 21), is ascribed to it as elsewhere to heaven (al-sam’d) indicates that it sometimes was identified with al-’adâm, i.e. that it had an equal extension as heaven.

But usually it is distinguished from the heavens, as the whole universe is described as a structure composed of a number of horizontal levels: uppermost, the throne—below it the footstool—then the seven heavens—and the seven earths, one on top of the other. Since the kursî is hollow and contains the whole world of heavens and earths in its cavity, the earthly observer—true to his daily experience—finds himself in a dome-like hemisphere. For the Muslim cosmologist and theologian, the Kur’ânic text (XXI, 34: ‘It is He who created the night and the day, the sun and the moon, each swimming in a sky’) further emphasized the physical substance of the heavens and imposed on him a critical attitude that made it difficult for him to simply adopt the common Greek notions that the stars or their spheres are living beings, having souls, which are moving by their own will.

It may be said, then, that it was due to throne, footstool, the seven heavens and earths being mentioned in the Kur’ân that Muslim scholars of all disciplines continued to be attracted by the various branches of cosmology. When Greek science had been introduced into the Islamic world, throne and footstool were often identified with the ninth and eighth spheres respectively, exemplified in such an influential theological book as al-Iqlî’s (d. 756/1356 [q.v.]) al-Kázwînî’s Mabîyan, the famous commentator and author like al-Kázwînî (d. 682/1283 [q.v.]) was much more cautious, and explicitly opted for leaving it to God’s knowledge whether this identification could be made (‘A’dârî al-makhbîkât, i, 54). Similarly, the seven earths were identified with the Hellenistic scheme of seven climatic zones (see tâlîm), although this may have caused some problems since the traditional texts had already been used for earthly parts to the levelling in belief and thought of the mystic.

The early commentators and traditionists of Islam already adopted ideas and cosmological models from earlier cultures of the neighbouring countries. As this scientific heritage became richer through the numerous translations made between the 2nd and the 4th centuries A.H., the cosmological models were further developed along the lines of such authorities as Ptolemy, Hipparchus, etc. But the earlier theories were not simply forgotten or thrown away into the waste basket as metaphorical assertions, nor were they expected to accord with the experiences of other cultures. Even an al-Birûnî (q.v.) remembered them; he naturally criticized them as outdated in his time, but the fact that he bothered about them at all demonstrates the influence—of whatever nature that may have been—which they still must have exerted on some of his contemporaries. Thus his discussion with Ibn Sinâ on the possibility of other worlds than ours may well be inspired by the traditional texts. The same may hold true for al-Bûrûnî’s distinction between mathematical hypotheses, equally allowing a heliocentric as well as a geocentric universe, and an eventual decisive proof based on physical reasoning.

Or the fact that Muslim scholars showed more extensive interests in the physical configuration of the universe than their Hellenistic masters (which is clearly evidenced not only by the use they made of Ptolemy’s Planetary Hypotheses but also by the numerous treatises with such titles as Tarîkh al-’âfâlâk), was most likely the fruit of the Kur’ânic and traditional texts on the seven heavens. Similarly, Muslim authors showed a surprising critical spirit when the number of the spheres was discussed; some of them accepted the eight or nine spheres of Greek cosmology only under the condition that the highest were identified with the footstool and the throne respectively which the Kur’ân had added to the seven heavens.

Such foreign influences raised much suspicion and fear among the more traditionally-minded scholars. Hence a reaction set in against the almost completely Hellenized world view that had been spread in Muslim literature. Thus already two centuries after al-Bûrûnî, a scholar like Fâhari al-Dîn ar-Râzî (d. 606/1209 [q.v.]), who proves to be widely read in all sorts of literatures available after the synthesis with the Hellenistic heritage had been achieved, still states categorically that all valid knowledge about the cosmos is to be reaped from the traditional, ‘inspired’ sources of Islam and not from the scientific sources of ancient cultures (‘there is no way to the knowledge of the heavens save through a traditional report’) (Mafâth al-’âhîb, vi, 149). In other words, the inner scientific value of the works inherited from pre-Islamic scholars was well known, but the knowledge derived from Islamic tradition still carried a functionality for the faithful which, outside the realm of faith, might not be understood.

But the heavens are not solely physical and astronomical entities, which for such speculative reasons as defining God’s place in the universe were of interest also to the theologians; they have a special significance also for the simple worshipper and for the mystical experience of the faithful. Thus when we examine such mystical writings as the Futûhât al-Makkîyya by Ibn ʿArâbî (d. 638/1240 [q.v.]), one is surprised to find long passages, expounding esoteric teachings, which seem to follow the cosmological models of the seven heavens and the seven earths. But it soon becomes evident that the cosmological stages have hardly any other function than to serve as ‘coordinate systems’ giving a structure to the observer’s experiences and psychological states of the mystic.

Similarly, in sectarian circles, and principally in the literature of the Ismâ‘îlî community, the symbolic significance of the seven heavens was stressed to the point that any physical or metaphysical reality which they had in the writings of the commentators, the mu’takallîmûn or the cosmologists, appears to have been suppressed. The fact that the various strata of interaction within the Ismâ‘îlî community were not described, as was the case with the other cosmological terms, however, that the cosmology of the seven heavens had been widely accepted in Islamic literature as common language.

In both cases, mysticism as well as sectarian exchange, the decisive inspiration did not really come from the Kur’ânic world view of the seven heaven
but rather from Neoplatonic teachings. A scheme was needed that would allow a graduated classification of reality without a transgression beyond all frontiers to spiritual descent from, and elevation to, the highest...
the form of an extension of the hearing of the Kur‘ān to that of religious qaṣāda and kāsidā, or furthermore, of sacralisation of the secular concert and a sublimation of the practice of ṣamā‘ into a custom which spread very quickly to Isfahān, Shirāz and Khorāsān, 18). Ṣamā‘ is thus initially an “oriental” phenomenon, promulgated in particular by the Persian disciples of Nūrī and of Dūnayd. By the same token, all of the early authors dealing with ṣamā‘ were Persians, with the exception of Abu Ṭālib Muhammad al-Makkī (d. 386/996 [q.v.]). Subsequently, ṣamā‘ spread to all areas, but found most favour in Persian, Turkish and Indian Islam. The first writings, composed a century after the inauguration of the custom of ṣamā‘, coincided with the first attacks on the part of traditionalists who sought to condemn music (such as Ibn Abī ‘l-Dunya (208-81/823-94 [q.v.]), the author of the Dhamm al-malākhī, cf. Robson), and constituted a reply to them. According to Pūrjadvādī (ibid., 22), these writings may be arranged in three groups and periods:

1. 4th/5th century: Abu al-Raḥmān al-Sulāmī (d. 412/941 [q.v.]), whose Ḳ. al-Ṣamā‘ is the first monograph devoted specifically to ṣamā‘; al-Makkī; al-Sarrādī (d. 378/988 [q.v.]); al-Kalābdāhī (d. 380/990 [q.v.]); and Abū Maṣṣūr. They base their arguments on ḥadīth and on the logia of the ancient mystics (Dhu ‘l-Nūn al-Mṣrī), being concerned above all to defend ṣamā‘ from its detractors.

2. 5th/6th century: al-Bukhārī; Abu ‘l-Kāsim al-Kuṣhārī (d. 466/1074 [q.v.]); al-Ghazālī (d. 505/1111 [q.v.]). In these authors, too, the defensive aspect is featured, but the Suffīs seem to rely on them more on account of their social and even political status.

3. 7th-8th/13th-14th centuries: Nadjīm al-Dīn Kubrā (q.v.); Rūzbihān Baktī Shīrāzī (d. 606/1209); Ahmad-i Dīn; Nadjīm al-Dīn Baghdādī; Abū al-Raṣād Kāshānī; Ahmad-Tūsī (8th/14th century, etc.); they take into account the social and ritual aspect and argue more rationally. After this period, ṣamā‘ was included in its entirety among the custom of the mystics and was no longer the object of judicial debates. Writers confined themselves to extolling its qualities and its symbolic meanings, some going so far as to consider it an obligation for adepts (Ahmad Tūsī, whose Bawdrik has been erroneously attributed to Ahmad al-Ghazālī, cf. Robson, 1990). After the 9th/10th/15th-16th centuries, the question of ṣamā‘ seems to have been filed away or exhausted, and setting aside the orders which retained its practice and its theory (Mawlawīs, Ǧīstīs), did not give rise to any more original literature (Ǧīṣī Derāz).

The function of ṣamā‘, as well as its conditions of performance, have evolved in a sense which al-Ḥuǧdīrī was the first to explore, and which the authors of the earliest Suffīs (al-Hallāq, Dhu ‘l-Nūn) had anticipated in their warnings. It became for some a form of delocation or a sensual pleasure, all the more so in that the rite now included dancing and was concluded with a meal. Furthermore, the proletariat indulged in profane ṣamā‘, in other words concerts with a religious pretext (Pouzet), not to mention rites of trance inherited from paganism and superficially Islamised (berated by Ibn Taymiyya). In order to restrain the adepts and counter the criticisms of the jurists, the majority of authors established conditions (al-Ghazālī) and rules of propriety (al-Nasafī), and distinguished between the types of concert (ṣamā‘) in terms of the nature of the hearing: some listen according to their ego (ṣamā‘ al-nafs, or their nature, ḥab‘), others according to the heart, others through the
A simple representation of the seven heavens spanning the seven earths. For both zones the shape of a cone is assumed, but the opposition of the two is emphasized by the choice of curved lines for the heavens and horizontal ones for the earths.
The cosmos described as a cone. Like a seven-fold dome, the seven heavens span the cone of the seven earths. The latter are part of a schematic "geography" based on a seven-fold division consisting of alternating earths, seas, and the Kaf mountains.
spirit. While for the first category, music (or samad) is not to be permitted, as for the adepts, not all music was considered detrimental. However, the question was asked: Who, "under whom", was more widespread, while certain orders were content with song. Similarly, romantic poems were adopted at a very early stage in Persia, on condition that they were to be interpreted by the adepts in a metaphorical sense—sometimes very subtle—relating to a spiritual object or to the person of the Prophet.

Faced with the diversity of attitudes, samad has taken on extremely varied forms, especially in combining with or associating with dhikr, the ritualisation of an ecstatic technique, which probably appeared a few centuries later. At the present day, it is most often in the context of a ceremony of dhikr that samad is performed, in the form of chant sometimes accompanied by instruments, whether in the course of one of the phases of the ritual, or in association with the metrical shape of the dhikr. Thus the distinction drawn by anthropologists between samad and dhikr, on the basis of the participation of subjects, "set to music" in one case and "making music" in the other, is not applicable, all the more so in that even silent chanting is generally accompanied by interior dhikr (dhafi), as among the Mawlavis, often being transformed into audible dhikr (dhakri, ghalili). In its primary definition, samad as hearing without acoustic participation of the adepts hardly survives except among the Mawlavis, the Bektashi-Alawis, the Indo-Pakistani Kavvals, and in the rites of marginal groups such as the Yazidis, the Isma'is, the ma'dal shamans of Baluchistan (types damali, kandali). On the other hand, in many rituals (hadra, hizb, ghalili), it survives as the introductory part (Kadiir of Kurdistan) or as a concluding point (sufi conclusion of the dhikr, the Stendiyya in Maghrib). In all these cases, the hymns or the instrumental pieces constitute specific repertoires generally distinguished from the music of the secular environment by means of their rhythms, their structures and their texts. Faced with the diversity of musical techniques put into practice, it is difficult to identify in purely formal terms a notion of "music of samad", except at the level of the force of expression, drawn from the dhikr as a form and as a mode of concentration. The difficulty in identifying a global specificity is due perhaps to the paradoxes underlined by certain shaykhs (al-Suhrawardi), according to which it is not samad and dance which induce ecstasy, but ecstasy which arouses the dance, or furthermore, that samad is only a revealing instrument and that it only supplies that which is brought to it by the bearer.

2. As a term in education. Here, samad (pl. samadî) means [certificate of hearing; audition; authorisation, licence]. With the rise of the large madrasas [q.v.], founded by rulers who were important personalities such as Nizâm al-Mulk (d. 485/1092 [q. v.]) or Nûr al-Dîn Ibn Zangi (d. 569/1174 [q. v.]), habits, followed so far in instruction and teaching, especially those in hadîth, took on an official character. It was the period in which places of education and training spread towards remote villages and distant provinces. The principles developed and represented by al-Khâfî al-Baghdâdî (d. 465/1071 [q. v.]), the great, critical systematiser of hadîth methodology, were most often in the context of a ceremony that went under the name of a derwische, in Oriental musulman au VI/IX siècle, in Sl, i (1983), 193-254; R. Burckhardt Qureshi, Qawwâlî sound, context and meaning in Indo-Muslim Sufi music, Cambridge, Mass. 1986; idem, Listening to words through music: the Sufi samadî, in Debeyaya, ii (1986), 219-45; J. Durin, Musique et extase. L'audition spirituelle dans la tradition soufie, Paris 1988; idem, Musique et mystique dans les traditions de l'Iran, Paris 1989; idem, L'autre oreille. Le pouvoir mystique de la musique au Moyen-Orient, in Cahiers des Musiques Traditionnelles, iii (1990), 57-78; idem, What is Sufi music?, in The legacy of medieval Persian Sufism, ed. L. Lewisohn, New York 1992; R. Burckhardt Qureshi, Localiser l'Islam. Le samad à la cour des sultans, in Cahiers des Musiques Traditionnelles, v (1992), 127-50; W. Feldman, Musical genres and zikirs of the Sunni tariqas of Istanbul, in R. Lifchez (ed.), The der- vish lodge, Berkeley, etc. 187-202. (J. Durin)
“when” and “where”, had assisted as auditor (sami) at a lecture on a certain work; who could show a note; but those who had joined the two without being involved and had only listened, had not been able to deduce for themselves any practical privilege from it. A new development grew up among jurists in the second half of the 4th/10th century, sc. jurists (shaykh, with isndd [q.v.] if he is not the author himself) which, in small gatherings can also be kept by the recorder (kdtib), keeps the protocol, during the next two centuries, first in Iraq and then in the Mediterranean basin (Egypt, Libya and the Maghrib), approximately twelve hundred terms. In this rich terminology, numerous appellations are found after separate parts (adjzd-t'. The number of auditors amounts in general to between ten and twenty, but they may also be less or more, or even so many that the recorder, who may belong to the group of auditors, may be assisted by a mithbit, who may or are taken over in transcripts, etc. The term samd-dt can be shown to have existed generally from the 5th/11th century onwards. They reach their prime during the next two centuries, first in 'irak and then in Syria. After the Mongol storm, the centre of gravity shifted to Egypt. The samd-dt can be found at the end of manuscripts and/or on their title- and fly leaves and/or between parts and chapters. In these certificates, the composition of a madqis is reflected, in the field of knowledge of tradition, including law, in the first place, and then in the fields of biographies and history, grammar and lexicography, adab in the widest sense of the word, but also of medicine, philosophy, etc.

The samad of the lectures are quite variable in their outer form and organisation. The lectures are presided over by a shaykh (rarely a shaykhah) as musmi (teacher); the reader (kātib) sits before him, while a third person, the recorder (kdtib), keeps the protocol, which, in small gatherings can also be kept by the musmi or the kātib. In an ideal case, the three of them—including the musmi—are mentioned one after another under their full names, titles, etc. in connection with the introductory formula kara-α (with tawwāya [q.v. if he is not the author himself]) and the title of the work (equally with additions like autograph, rwsyaq [q.v.], owner, etc.); then the reader, and finally the recorder with a statement of the place (such as madrasa, madēs, dr, zawiyā, bayt, ribāh, dayr, hān, etc.), date and duration of the lecture; a list of auditors (samāt) is also added: men, young males, women, young females, children (often with an exact indication of their age), and slaves accompanying them—including the mithbit, who may or are present, and slaves accompanying the lecturer, for his part, has gathered, for the western Mediterranean basin (Egypt, Libya and the Maghrib), approximately twelve hundred terms. In this rich terminology, numerous appellations are formed from the nouns samāt or hāt or nāz combined with a qualitative or a nominal complement. Within the range of the latter, this study will be limited to mentioning only those which evoke a Biblical or historical personage, authentic or legendary, in the field of knowledge of tradition, including law, as well as the names. He may be assisted by a muḥbir (coneerifer), taken from among the auditors, who confirms in a gloss certain places in the idāzat al-samāt, or from whom hand copies, if true, are textbooks, or an author, new samāt are often added in following or later sessions or are taken over in transcripts, etc. The shaykh may issue a note of samāt for one single auditor personally, which is then introduced by the term samā. Already the great al-Samānānī (d. 562/1166 [q.v.]) made efforts to obtain and collect samāt/masmūt either by correspondence or through a third person. They played a role in purchases and estates. Samāt are inexhaustibly overflowing sources of a high documentary value for the spread of a work and its manuscripts, for the completion of the extensive biographical literature, for the busy relations of the learned centres between themselves, and for the history and archeology of individual places.
Joshua" and the hut Sidna Sulayman "the fish of our master Solomon"; these three names are given to the common sole (Solea vulgaris). "Barid" is the name given to the red mullet (Mullus barbatus). The Ibn Ya'qūb "the son of Jacob" is the common sargo (Diplodus sargus). The samakat al-Iskandar "the fish of Alexander the Great" is the hammer-head shark (Sphyraena syrana). With the samakat al-Abraham "the name given to red mullet the sparus; utrut, the hammer-head shark (Sphyraena syrana); iskumn, the mackerel, from Scyliorhinus canaliculatus; sard, the salmon, from Salmo salar; gudus, the cod, from Gadus; lafut, the burbot, from Lota lota; tan, tan, tun, the tunny fish, from Thunnus; tanir, the tench, from Tinca; ankaflis, the eel, from Anguilla; arrang, ranga, ranka, the eel, from Anguilla; arrang, ranga, ranka, the herring, from Clupea harengus; baskara, the ray, from Urolophus; surghūs, the common sargo, from Sargus vulgaris; sardin, the sardine, from Clupea pallasii; isfern, safarna, safarnayā, the spot or barracuda, from Sphyraena; ikurnī, the mackerel, from Scyliorhinus sardina; serif, safarna, serana, the lochoph, from Lophotes; limanda, the dab, from Limanda. Numerous appellations are also encountered formed from the name of a terrestrial creature joined to the complement al-bahr "of the sea", such as: sabā' al-bahr "sea beast" for the sea wolf (Anarchias lupus); faras al-bahr "horse of the sea" for the bellows fish (Centriscus); kunufūl al-bahr "hedgehog of the sea" for the sea-urchin (Diodon). Similarly, many terms are composed of abū "father of..." or umm "mother of...", with the complement of a noun marking a characteristic of the fish concerned. The following are examples: abū karn "father of the horn" for the unicorn fish (Nasus unicornis); abū mirṭaqa "father of the hammer" for the hammer-head shark (Sphyraena syrana); abū sayf "father of the sword" for the swordfish (Xiphias glacialis); abū yundūk "father of the chest" for the coffer fish (Ostracion nasus); abū minkar "father of the beak" for the half-beak (Hemiramphus); abū baṣ̄ūna "father of the scales" of the salmon (Prisci prisci); abū qiqār "father of the scales" of the goatfish or mullet (Mullus barbatus); umm karn "mother of the horn" for the trigger fish (Balistes); umm al-ghābītī "mother of the barbels" for the barbel (Barbus barbus). Some names derive from living foreign languages, and especially from Spanish, such as: angīyūs, angīyūs (Spanish: anchovy). The anatomy of the fish is summarised in few words. The scales are called, according to the regions: barisāf, fisīs, lafīs, kīrāt, kībrā, baṣīr al-hūd and ashqāmā (Spanish: escamas). For the gills and the bronchi, organs of respiration, the only words found are: khayyūm, pl. khayyāmī, khayyūsū, nakhshūshī pl. nakhshūshī. The cetaceans expel water by means of blow-holes or nāyāms pl. nāyāms. For the fins the terms are: dānān al-samak, zīrīsa, bahānīsa. The eggs laid by the fishes (samār) constitute the spawn, sar al-samak, sar, sarus, sa'ur, deposited in spawning-grounds or naysam al-samak, habitual sites peculiar to each species: it is there that the fry (bu'āna) develop.
to the arenicol (trimùnîn), a small beach worm (Arenicola marina).

Once ashore, the fisherman (khanndk, 'arakî) delivers his catch to a fishmonger (samman, 'aw adel) who maintains a shop (khamâka) in the fish-market (sik al-khamnânîn).

Fishing in fresh water, practised in stagnant waters as well as in the current of any watercourse and large river, employs diverse techniques. Where the depth allows, the fisherman enters the water directly, wherever he can find a foothold, thereby dispensing with the need for a boat. By this means he can deposit an eel-trap (sall, radjîn, radjûn, wakhâr) with bait, which needs to be raised only once or twice daily. In the absence of such a trap, he contents himself with digging a channel in the water-bed (kannûra), in the place which he judges to be the best conduit for the aquatic fauna, and baits it copiously; eels, barbels, breams, carp, and many others will soon arrive to feed there. When he sees his channel swarming with fish, he needs only a landing-net (ghirdfa, c. c.)

If the catch is particularly abundant, he may place some of the fish in buckets of water, transferring them, as a reserve, to a fish pond (makkîn, nqals, tkhûddla, fudla, bikra) prepared for this purpose. In the Magrib and the Near East, a very popular and lucrative form of fishing, practised in fresh water as well as on the sea-shore, consists in the use of a stick fished with the small bag-shaped net known as a cast net (jarha, jarrah, basyya) with weights attached to its periphery in such a manner that it sinks to the bed of the water. The caster, who may stand up to waist-deep in the water, draws it slowly towards himself, thus imprisoning the creatures caught in it; eels and barbels are held by the bait which the fisherman has thrown into the water and which needs to be raised only once or twice daily. In the absence of such a trap, he contents himself with digging a channel in the water-bed (kannûra), in the place which he judges to be the best conduit for the aquatic fauna, and baits it copiously; eels, barbels, breams, carp, and many others will soon arrive to feed there. When he sees his channel swarming with fish, he needs only a landing-net (ghirdfa, c. c.)

The bait may be an earthworm (dûdâ) or a small fresh water crustacean, the water-beetle (Daphnia pulex (burnáb), nallâ, khâlî, bârrî), or a small fish, he needs only a landing-net (ghirdfa, c. c.)

The bait may be an earthworm (dûdâ) or a small fresh water crustacean, the water-beetle (Daphnia pulex (burnáb), nallâ, khâlî, bârrî), or a small fish, he needs only a landing-net (ghirdfa, c. c.)

4. Literature.

5. Licitness.

On account of the predominant place occupied by fish in the diet of Muslim populations, it has been the object of judicial dispositions based on Kurîanic law, in particular the verse (V, 95) ‘You are permitted the game of the sea (jâyd al-bahr) and the food which is found there’. Any fish of non-cartilaginous skeleton and devoid of blood may be lawfully consumed, without a requirement for ritual slaughter. However, fish found dead may not be consumed. Also forbidden are: (1) fishes of cartilaginous skeleton, in other words the selachians or squalidae (kâfisîyûn) including the shark with its various species (kîrîh, awawîl, kawusû, kanyû, kanyûn, tufayli, kurnûy, âlûm, kalb al-âl, bânûbûk, liyûd, kwaîfî, bâraîfî, abîfînî, abîl-mûmûnî, most of these names supplied by al-Dâmirî, the hammer-head (bûkra, mîzîrâl al-bâl, abîrî, mîrâla, samakât al-ISkandar, naddîfîr), the spotted dogfish (g欢呼înî) and the ray or skate, with its multiplicity of names (raya, radja, waran, jarak, yamamât al-bâl, bâhnîn al-bâl, tarsa, samak al-tars, dârika, samak al-tîmâm, hasira, fardh, kûbû, haîlû, wâsûwa, mânûnî, abîl-mûmûnî, (2) the marine mammals or cetaceans (bânsîyûl) including the whale (wâla, bâla, bâlîla, banîna, bâlin, bâiî Yânînî), the humpbacked whale (kûbû, gîmât al-bâl), the sperm-whale (sâmâr), the porpoise (khnîzîr al-bâl, bânîba), the dolphin (dulûfî, dafîn, dafîrî, dafîrî, duku) the narwhal (karkâdân al-bâl, bârîs al-bâl, the finback (kîrkîl, mânûrî, the orc or grampus (urka, kattîfî) and the white whale (bâhîrûsî, kalb al-bâl); (3) the amphibi- marmal mammals (kawâsîb, bârmâmîyûn) or pinnipeds (zînîfiyyûn al-âkîdâmîn) including the seal (shâykhî al-bâl, bâlî al-bâl, fûkâna, fûkakama, bî mînî), the monk seal (shâykhî al-yahûdî, abîbî al-mârînî, the fîl al-bâl, fîl, the orca or killer whale (dûb al-bâl, sîd al-bâl, bâkraît albâl) and the elephant seal (fîl al-bâl); and (4) the sirenian mammals or ‘sea cows’ (kîhîlînîyûtît, bânîî al-mâmî) including the manatee (kharîfî al-bâl, wmm zubaybâ), the dugong (âtîm, mâlîsî, nákî al-bâl, zâlîkîî, hâfîfî), For Rhytina stelleri, the sea cow (bûkraît al-bâl) of the Red Sea, it has been extinct for two centuries. All of these aquatic creatures have never been always been hunted, either for their abundant stocks of fat, useful for many purposes and in particular for the making of soap and the fuelling of wicked lamps, or for their thick and very resistant hide, used in the manufacture of shields and, in particular, of protective shoes for the feet of camels required to traverse stony deserts.

6. As a source of diet.

Fish has been a staple source of nourishment for humanity from the outset. It is consumed in various forms. Firstly, it may be fried or fried after cooking on a fire. On the other hand, it is the object of four principal modes of preservation. The first, much used in Egypt since the time of the Pharaohs, is desiccation by exposure to the sun of large and small fish (mugamma, sars, buhûsû, kârîdî) such as the stockfish (bâkâlûfû, bâkâlûfû, bakkû, bâkâlûfû, from the Spanish
bacalao). The next is salting and smoking (tamhh and tadkhin) for small fishes (sqyr) such as bacalao. The next is salting and smoking (tamhh and tadkhin) for small fishes (sqyr) such as... (b. 626/1288-9), see ibid, and in al-Damm, s.v. cankabut).

In the Arabic sources there are, however, different...

Also used is pickling or maceration with spices in brine (salămūra). In Tunis this is the method used to preserve carp (būm). Finally, there remains preservation in oil or vinegar and packing in metal containers; this applies to the sardine (sardīn, sarda, bisrīya, abshīya, sam), the cod, the mackerel and the herring. Delicacies (muncīlū), such as caviar (khibyd) and botargo (batrakh), are not widely consumed in Arab countries.

As for culinary preparations of fish, they are most varied and many are similar to those of Europe. Well-known, among others, is the fish stew (munazzalat al-samak, maṣhkūla) based on eel or carp. The ancient Arabic treatises on culinary art supply five recipes for this dish, which has the head of a pig, is covered with repel and banish by making the loudest possible noise, and the sailors hang from the peripheral points of the hut (al-hut), which shatters the ships (fdtus). Who encountered there enormous marine creatures, descriptions of different seas the accounts of seafarers are not widely consumed in Arab countries.

6. Fabulous marine creatures.

Arab authors naturalists and geographers, such as al-Kazwīnī, al-Dāmīrī and al-Dājbīz, include in their descriptions of different seas the accounts of seafarers who encountered there enormous marine creatures, unidentifiable and very dangerous. Thus they mention the fāsīt or hūr al-bayyad which shatters the ships which it encounters, but which is put to flight when the sailors hang from the peripheral points of the vessel rags stained with menstrual blood (hayyāl). Also mentioned, in the Sea of China (bahr al-Sin), is a fish three hundred cubits in length which the inhabitants of the island of Wākwāk (Indonesian Archipelago) repel and banish by making the loudest possible noise, beating cadtrons and tomports. In the same sea lurks the sām, which has the head of a pig, is covered with a hairy fleece instead of scales, and shows female sexual organs; it is allegedly edible. In the Indian Ocean (bahr al-Ḥind) there is a large fish nicknamed kātaba l-kaṭūb ‘he has written the book’, the juice of which produces an invisible ink legible only at night, and another large green fish with a serpent’s head whose...
theories about the shape of the salamander. Many authors identify it as a bird (al-Djahiz, Ibn Khallikān, al-Ibshīḥ; Kāmūs and Tāḏī, s.r.s.); only al-Damirī, besides calling it a bird, describes it as a reddish-yellow coloured animal (dāḥīb) with red eyes and a long tail. Al-Kazwīnī mentions it in his Notes, but his remarks are superficial. According to the Arabic Physiologus, the salamander is a stone that extinguishes fire (Land, Schol., 166, cap. 52; cf. samandal as a word for asbestos). Moreover, especially in the works of the Arab lexicographers, there are contaminations of the samandal (Tāǧ, Līṣān, Tāḏī, s.r.s–dī); it is also found as a word for asbestos). Moreover, especially in the works of the Arab lexicographers, there are contaminations of the samandal (Tāḏī, Līṣān, Tāḏī, s.r.s–dī). The said author is mostly thought to be from India (al-Damirī) or in China (al-Ibshīḥ).

In Arabic literature, one must distinguish the folkloristic statements on the salamander from the concrete descriptions—especially those from a medical point of view (Ibn al-Baytār, Heil- und Nahrungsmittl., tr. J. von Sontheimer, ii, 3; Ibn Sma, Masdlik, iii, 232; see also ʿUmarī, Masūṭī, xx, 62; for its being mentioned in Greek literature, see Dio-Dorostorids, ii, cap. 67)—to be found under the lexeme salamandaḏajān. There, the salamander is described more correctly as a lizard or snake, its medical effects, including its poisonousness, are stressed, and the idea of its being unburnable is explicitly rejected. Real varieties of salamanders (family Salamandridae, order Urodela of the amphibians) are not very common in the Orient. The fire salamander (Salamandra salamandra) which is black and has yellow or orange spots, is to be found in Asia Minor, Syria and North Africa. In Asia Minor we also find the Anatolian Salamander (Mertensiella luscai), the colour of which ranges from yellow to orange, with additional shiny black spots, and in the Caucasus there is the Caucasian salamander (Mertensiella caucasica), which is black with light spots. They both belong to a genus of varieties with slender bodies.

**SAMANDAR** [see KHAZAR].

**AL-SAMANĪ, Abū ʿl-Ḵᵛā记者了解 ABU ‘L-KHUSRAW ABU MANSūR b. Muḥammad b. ʿl-Qādisī, jurist, linguist, historian, theologian, translator of the divine names. His nephew does not mention his writings but, after his death, he entrusted his son to his two learned brothers. Under their guidance al-Samānī received a comprehensive basic education in Kurān, fiqh, ʿarbiyya, and adab. Not quite 20 years old, he embarked on the taḥlīl-al-ʿilm, first, still under the tutelage of his two uncles, once more to Naysābūr for a special training in the ʿādāth of Muslim (q.v.), then also to Tūs and other places. From his home town he visited the centres of learning of his time on three long journeys: 529/1135–43, 540/6/1145–51, and—together with his son ʿAbd al-Rāḥmān—549/52/1154–7. He went via Isfāhān and Hamadān to Baghdād and its environs, to Mecca and Medina, to Damascus and Jerusalem (which at the time of his visit in 536/1141 had been in the hands of the Crusaders for 42 years), and, in the north and the east, to Kāh-ʿarazm, Samākand, Buḵhārā, Balḵ and Harāt. A number of these places with their inhabitants schools and mosques, he visited more than once (he also went on the Pilgrimage twice), even if that involved detours, constantly driven, as he was, by his desire for taḥlīl-al-ʿilm.

This preoccupation of his informed not only his teaching in Marw and elsewhere but also his rich literary production which centred on the Prophetic Traditions and their transmission. With admirable orderliness and fastidiousness, he constantly strove to enlarge and correct his collected materials. Many of his more than 50 works most likely became casualties of the Mongol invasion. Marw was conquered in 618/1221. As late as 615/1218 Yaḵūt (q.v.) had participated in a maḏūlis of al-Samānī’s son ʿAbd al-Rāḥmān (537/617/1143–1220, al-Ṣafādī, xviii, 331) (see Muṣjām, i, 6); he had worked in the local libraries, in- ter alia those of the Samānī (b. c., iv, 509) and had excerpted some of the great scholar’s books, thus e.g. his biographical magnum opus on the Traditionists, namely:

(1) al-Ansāb. Arranged alphabetically according to изма [q.v.]; it contains 5,348 entries; each starts with an exact indication of the pronunciation of the изма, gives the place, the person, or the group etc. to which the relative adjective refers, followed by the full name of the scholar in question with Irish names on teachers and disciples (िनाद), places and times of their ac-
tivities, and the date of death; as a rule, other personalities (including women) having the same *nizāra* will be joined to the entry, so that the number of the scholars mentioned exceeds by twice or three times the amount of the number of entries, not counting the many additional persons that occur in a *sīta* as teachers, colleagues, or disciples of the biographers. In not a few places Al-Samʿānī indicates the literature used by him; the small *Kīyāb al-ʿĀbīn* by Ibn al-Kaysārānī [qn.], quoted by Yākūt, was likely also known to him. He finished the clean copy a few years before his death, but constantly added supplements. It was edited in facsimile by D. S. Margoliouth, Leiden-London 1912 (containing an introduction with a list of his works); edited by al-Mu′allimī *et alii*, 13 vols., Haydarābād/Deccan 1382-1402/1952-82 (with a detailed introd.); since 1976 reprints and new editions (in part) in Damascus and Beirut complete in 5 vols., ed. ʿA.ʿU. al-Bārūdī, Beirut 1988. Abridgments with supplements: the best-known is that of the historian ʿIzz al-Dīn Ibn al-ʿAṭīr [qn.], *Lūb al-ṣabāḥīt al-ʿAnṣāb*, 3 vols., Cairo 1357-67/1938-49 (repr. Beirut 1988); this was abbreviated and added to by al-Suyūṭī [qn.], *Lūb al-ṣabāḥīt fī ṭabrīr al-ʿAnṣāb*, ed. and annot. P. J. Veth, 2 vols., 1841-51 (repr. of vol. 1, Baghdad 1963).

(2) *Ṭabībī fī l-Muʾammad al-kabīr*, a work of more than 2,000 pages, is the best and the most reliable source of biographical dictionary, covering Al-Samʿānī’s teachers, as well as the students of his students, whom al-Samʿānī had either encountered during his *talab al-ḥadīth* at home and abroad, especially in Nāṣībūr and Isfahān, or with whom he had corresponded, or, finally, from whom he had received an *idāra* [qn.] through intermediaries. The biographies are brief but informative; they reflect diary entries. Al-Samʿānī produced the first copy in the year 1001/1689, which may which have actually overtaken him while doing this work; for the beginning and the end are missing in the ancient *Zayriyārī*, *ḥadīthī* 529 (al-*lshš*, 529). This work had only been published once, in a Cairene ms. of 714/1316 and in a Nāṣībūri ms. of 998/1591. On 529 he mentions at the end that he has treated the biography of al-Ḥusayn b. ʿAlī in the first place. The text is not a critical edition of his source material, as he states at the beginning of his work that he has followed *Ṭabībī* in this respect. The work is incomplete, as his students and other scholars have included other biographies in the *ṭabībī* and *tahdhib al-Anṣāb*. The unique copy of 647/1250 in Topkapi Sarayi, Ahmet Khan, was likely also stored by him; the small *Kitab al-Anṣāb*, part of *ṭabībī* is missing.

(3) *Muntakhab Muʿallāt al-Waṣīfah*, another biography of scholars, as well.

(4) *Ṭabībī* to *Ṭabībī* Bāghdādī of al-Khaṭīb al-Bāghdādī [qn.], known from quotations; excerpt: Leiden 1023 (de Goeje-Juynboll); for two other (?) excerpts see Munirā, *Ṭabībī*, 1, 31; cf. Ibn al-Ṣaḥbānī, *Ṭabībī*, 1377/1957, 241-2; MʿA. Muḍarrīs, *Rāyihān al-ṣabāʿād*, Tabrīz 1346/1967, i, 427. — As far as is presently known, the following biographical works have not been preserved, even in excerpts: *Wangī*, al-muṣallah *l-kāʾim in al-nuʾayn*, Muʿād al-ṭayyīḥ [a list of the teachers of his son], his early work, *Ṭabībī* Marw, which Yākūt (*Muʿād*, i, 75, 15) quotes in his *疏kāʾim in al-nuʾayn*, *Muʿād al-ṭayyīḥ*, the last two are likely to have contained biographies of scholars, as well.

1. History, literary life and economic activity.

The early history of the Sāmānīd family is obscure. They may have stemmed either from Soghdia or, perhaps more likely, from Tukhāristān south of the Oxus, probably from the petty landowners of the Balkh area. It was not possible to connect the Sāmānīds with a noble Arab tribe, as the almost certainly originally Persian Tāhirīds endeavoured to do, but the tradition later grew up of an aristocratic origin for the Sāmānīds through descent from the Sāsānīd warrior hero Bahram Cūbīn [see Bahram]; al-Birūnī, al-Ālīḏūr al-bākīya, ed. Sachau, 39, states that there was "universal agreement" over this claim (see C.E. Bosworth, The heritage of rulership in early Islamic Iran and the search for dynastic connections with the past, in Iran, JBIPS, xiv [1976], 58-9). All that we really know is that the dihkān Sāmān-khudā apparently accepted Islam at the hands of the Umayyad governor of Khurāsān Asad b. 'Abd Allāh al-Ḵāšī (i.e. at some point during 105-7/725-7 or 117-20/735-8), therefore naming his son after the Arab governor (see Bosworth, Asad b. Sāmān-khāda, in EIr).

However, nothing is heard of the family for several decades, until, at the 'Abbasīd caliph al-Ma'mūn's behest, his governor in Khurāsān, Ghassān b. 'Abbād, in ca. 204/819 rewarded the four sons of Asad b. Sāmān-khudā for their support to the 'Abbasīds during the rebellion in Transoxania of Rāfī' b. al-Layth b. Sāyyār [q. v.]. Nūḥ was given the governorship of Samarkand; Ahmād, Fargāna; Yabhā, Shāh; and Ilyās, Harāt. This last branch of the Sāmānīds south of the Oxus did not prosper, and Ibrāhīm b. Ilyās was in 253/867 defeated and captured by the Saffārid invader of Bādghīs, Ya'qūb b. al-Layth [see Saffārides]. The ones in Transoxania, on the other hand, had a glorious future ahead of them. After Nūḥ died in 227/841-2, the governor of Khurāsān 'Abd Allāh b. Tāhir [q. v.] appointed the remaining two brothers in Transoxania, Yabhā and Ahmād, over Samarkand and Soghdia. Very soon the line of Ahmād (I) replaced that of Yabhā, and with the Saffārid dispossession of the Tāhirīds from Nīghāpur in 259/873 and the lapse of Khurāsān into something like anarchy for the next two decades, Naṣr (I) b. Ahmād b. Sāmān-khudā found himself in effect autonomous ruler in Transoxania, with his capital at Samarkand. The caliph al-Mu'tamīd formally invested him as governor of Transoxania in 261/875, and from the 250s onwards Naṣr began to mint dirhams of a mixed 'Abbasīd-Sāmānīd type, with the regular minting of dirhams and then of dinārs beginning ca. 279/892 with the formal accession of Ismā'īl b. Ahmād; their father Ahmād (I) had already issued his own copper fulūs [q. v.].

However, fratricidal strife between Naṣr and Ismā'īl, whom Naṣr had sent to subdue Bukhārā, ended in the military triumph of Ismā'īl, although he left Naṣr as de jure ruler in Samarkand till the latter's death there in 279/892. Ismā'īl then assumed sole power, ruling over Transoxania and Fargāna from Bukhārā, whether the Sāmānīd capital was now permanently transferred.

Abū Ibrāhīm Ismā'īl (I) (279-95/892-907 [q. v.]) may be regarded as the real founder of the Sāmānīd amirate, his power sealed by his victory over the Saffārid 'Amr b. al-Layth [q. v.] in 287/900, after which the caliph al-Mu'tamīd appointed him governor of both Transoxania and Khurāsān. This was in practice the concession of independent rule there, given the distance of the Sāmānīd lands from Baghdaḍ and the shrinkage of the direct sphere of 'Abbasīd political authority to Irāk, Syria and western Persia, although the Sāmānīds continued till the end to pay formal respect to the caliphs, placing them in the khaṭba of their territories and their names on their coins, and employing for themselves no higher title than that of amīr. One role which Ismā'īl inherited as ruler of Transoxania was the defence of its northern frontiers against pressure from the nomads of Inner Asia, and in 280/893 he led an expedition into the steppes against the Karluk [q. v.] Turks, capturing Talas and bringing back a great booty of slaves and beasts.
Sâmanîd suzerainty was asserted over various local rulers in the Syr Darya valley and on both sides of the upper Oxus, such as the princes of Šahrâsâna [q.v.], the Abû Dâwdîdî and Bânîqûrîdîs [q.v. in Suppl.] of Türkchûstan and Khuttal and the Mubârâqîdîs [q.v.] of Câshânîyân and over the ancient kingdom of Khârazm [q.v.]. In the west, he extended his authority over the Zaydi Imâms of the Caspian region, and in general, achieved a reputation as a capable and just ruler.

Ismâ’il’s son Abû Naṣr Abûm (II) (295-301/907-14) attempted to recover the Caspian provinces which had slipped from Sâmanîd control, and sent two expeditions into Sîstân (298/911 and 299-300/912-13), where Šâfîrârî authority had fallen into disarray [see Šâffârîds]. But he was murdered at Farâbîr by his Turkish slaves in Dîmâdîd II/301/January 914, allegedly because of his excessive favour at court to the ‘ulama’ and other members of the religious classes, thus earning for himself the posthumous title of al-amîr al-‘âbidîn “the martyred prince”. The practice of awarding posthumous lakabûs had already begun with Abûm’s father Ismâ’il, who became known as al-amîr al-mâdîf or al-amîr al-‘âbidî “the last/jjust prince”, and some of the subsequent abîrs further assumed regnal titles, such as Nûh (I) b. Naṣr’s one of al-malîk al-mu’âyyad, appearing on his coins, and Nûh (II) b. Mûnûs’s al-malîk al-munâsîr, in addition to the titles given to them after their deaths (see Bosworth, The titulature of the early Ghazanâdîs, in Orient, xv [1962], 214-15).

His eight-year old son Naṣr (II) [q.v.] succeeded for a reign of some 30 years (301-319/914-43). He faced prolonged internal opposition from his ambitious uncle and brothers, who at various times controlled Samârând and parts of Khûrâsân and who stirred up in the cities popular elements which included the quadîs and qâsmîs. Sâmanîd armies penetrated as far westwards as Rayy in northern Persia, occupied in 314/926, when al-Müktâdî formally granted its governorship to Naṣr. Sâmanîd coins were issued from there till 920/932 and at various times thereafter (see Miles, The numismatic history of Rayy, New York 1958, 147 ff), although control here was disputed with the Dayâvînî commanders and then with the Buyid Rukn al-Dawla [q.v.], who secured the most permanent control of the city after Naṣr’s death. The later part of Naṣr’s reign was noteworthy for the appearance in Transoxania of an extensive Ismâ’ilî Shî’i de’wâ, with converts made up to the highest level at court before an orthodox Sunnî reaction and purge of these heretics set in; this episode was an exception to the normally firm upholding of Sunnî orthodoxy by the abîrs’ policies. His eight-year old son Naṣr (III) (331-37/943-47) had devoted his attention to the ambitions of Khûrâsân, a specialisation and sophistication as the instrument of the abîrs’ centralising policies. As with the administration of other provincial dynasties, the model was that of the caliphs in Baghdad. The local historian of Bûkhârâ, Narghahû, describes ten dâ‘ûms, beginning with those of the wuzûr, the treasurer and the ‘amid al-mulûk or head of the chancery (see for these, Barthold, op. cit., 229-32), and many of the bureaucratic techniques of these departments can be pieced together from the information given by the Sâmanîd official Abû ‘Abd Allâh al-Khârazmî [q.v.] in his encyclopaedia of the sciences, the Muqta’d al-salâm, dedicated to the vizier Abu l-Haṣan ‘Ubayd Allâh al-Utbî (see Bosworth, Abû Abdallâh al-Khuârazmî on the technical terms of the secretary’s art, in JESHO, xii [1969], 113-64). It was this efficient administrative system which brought in rich amounts of taxation from the agricultural oases of Soghdîa, Farghânâ and Khurâsân, together with revenues from the slave traffic between Inner Asia and the Islamic lands further west (the abîrs levied customs duties at the Transoxanian frontier towns on imported Turkish slaves and at the Oxus crossings for their transit across the Sâmanîd dominions), so that the 4th/10th century geographers and travellers like Ibn Hawkal and al-Mu’âdîdî could praise the Sâmanîd’s for their mild rule and moderate taxation and could extol the cheapness of provisions and pleasantness of life in their lands.

The security of the realm rested, of course, on the powerful army which the Sâmanîd maintained under the command of the Chief Hâdîg. The first troops of the Sâmanîd must have been recruited from the free Iranians of Transoxania, long trained in the martial arts by their position on the northeastern frontiers of Islam facing the pagan steppes; but from at least the time of Ismâ’il b. Abûm onwards, a Turkish slave guard around the abîrs’ comes into prominence, formed from Turks brought in from Inner Asia (see Barthold, op. cit., 227-8; Bosworth, An alleged embassy from the Emperor of China to the Amir Naṣr b. Abûm: a contribution to Sâmanîd military history, in M. Minovi and I. Afshar (eds.), Yad-nâm-e Irân-ye Minârs, Tehran 1969, 1-13, and Gûlâm. ii. Persîa). This slave guard early made itself a force in the internal affairs of the state, with its own aims and interests. As noted above, Abûm (II) b. Ismâ’il was killed by his gûlâmân, and from the mid-4th/10th century onwards, the influence of the generals, and especially of the holders of the coveted post of Commander-in-Chief in Khûrâsân, frequently resulted in the making and unmaking of Sâmanîd princes, as the personal authority of the abîrs’ waned (see for this, ‘Umâr b. Mûnûs’s ambitions in Khurasân of the powerful governor there, the Iranian noble Abû ‘Ali Câgâhîn, endeavours to replace him by the Turkish commander Ibrâhîm b. Sîmîrûr and to maintain, in alliance with the Zîyârîs [q.v.] of Gûr-gân and Tâbaristan, the position in northern Persia against the Sâmanîd’s rivals, the Buyids. A disturbing portent for the remaining years of Sâmanîd rule was a financial crisis in the state, caused by the cost of the wars in northern Persia and the expenses of the army in general. During the next reign, that of Abu l-Fawâîîs Al-Malik (I) b. Nûh (343-50/954-61), the ascendancy of the Turkish slave commander Alptîgîn [q.v.] was notable, although when ‘Abd al-Malik died, he was unable to place on the throne his own candidate, the dead abîr’s young son Naṣr—who would have been a puppet in the hands of the military—and was forced to flee to Qâzîn, on the far eastern fringes of
the Samanid lands. 'Abd al-Malik's brother Mansūr (I) b. Nūḥ now ascended the throne (350-65/961-76 [q.v.]). His reign was in general peaceful, although fighting continued in northern Persia, on the whole favourably for the Samanids, and after Alptegin's death at Ghazna (352/963), his Turkish successors in eastern Afghanistan once more acknowledged the amir's overlordship.

The last twenty years or so of Sāmanid rule were ones of increased impotence of the amirs in face of the ambitions of Turkish commanders like the Simджuris, Tāṣh, ḅegtuzun and Fā'īk Khāṣṭa, and deepening crisis in the state as its tax base shrank. Mansūr (I) b. Nūḥ had a vizier, Abu 'l-Husayn 'Abd Allāh al-'Utbī, appointed in 367/977, did what he could to halt the decline and to stem the successes of the Buyids, who were poised to invade Khūrāsān when the death of 'Aṣūd ad-Dawla [q.v.] fortunately supervised in 372/983; but al-'Utbī was murdered in 371/982 by the machinations of Abu 'l-Ḥasan Simджūrī and Fā'īk Nūḥ (II) b. Mansūr (363-67/976-97 [q.v.]) soon no longer had any authority in Khūrāsān and was by the end of his reign reduced to controlling Soghdia only. He was forced to call in the assistance of Sebüktigın from Ghazna against Fā'īk and Abū 'Ali Simджūrī after the latter had encouraged an invasion of the remaining Sāmanid lands from the north in 362/972 by the Turkish Karakhanids under Bughra Khān Hārūn [q.v.]. Bukhārā and Samarkand were temporarily occupied by the Turks, but although these were recovered by Nūḥ, the position got steadily worse.

A fresh Karakhanid invasion took place in 386/996, and at this point, Sebüktigın and his son Māhmūd [q.v.], who now controlled Khūrāsān, came to an agreement with the Karakhanid ilḫ Ilār Nāšr b. 'Ali whereby Sebüktigın retained Khūrāsān and the ilīg occupied the whole valley of the Sīr Daryā. Nūḥ died the next year, and the reign of the new amir, his son Abu 'l-Ḥarīrāt Mansūr (II) [q.v.] lasted only two years (387-9/997-9) before he was deposed by Fā'īk and Bguṭtuzun and replaced by his brother Abu 'l-Fawārīs 'Abd al-Malik (II). Māhmūd b. Sebüktigın by 398/999 secured for himself all the former Sāmanid lands south of the Oxus, and in this year the Karakhanids under the ilīg Ilār definitively took over Bukhārā without any serious resistance, thereby ending the dynasty's vestigial rule in Soghdia. A further brother of Mansūr (II) and 'Abd al-Malik, Abū ʿĪbrāhīm Ismāʿīl (II) b. Nūḥ al-Muntasīr [q. v.], attempted a revanche in the following years, but after some initial successes against the Karakhanids was killed in 395/1005, the last hope of the Sāmanids.

The downfall of the Sāmanids meant that the northeastern part of the Iranian world, first the Trans-Oxus provinces under the Karakhanids and then, four decades later, the steppe lands between the northern rim of the mountains of Khūrāsān and the middle Oxus under the Saljuqs, passed for the first time into Turkish control. It was after this that the gradual process of the almost complete (save for the modern Tadjikistan) Turkicisation of these regions accelerated, a process which must however have begun already in Sāmanid times with the extensive influx of Turkish slave soldiers into the state apparatus and the peaceful settlement of sedentarised and Islamised Turks along the northern fringes of Transoxania. On the documentary evidence, the old Soghdian language disappeared towards the end of the Sāmanid period under pressure from New Persian, which was probably the day-to-day language of much of the Sāmanid bureaucracy's routine business (although it may be noted that the neo-Soghdian language Yaghnobī has survived to this day in the valley of the Yagnob, an affluent of the upper Zaraḵhān; see IRAN. Languages, in Suppl.), and Turkish. There was, however, some counter-pressure against this trend from the 'ulamāʾ and religious classes and from the higher bureaucracy, who were trained in the classical Arabic sciences, in favour of the use of Arabic as the language both of scholarship and of diplomacy. According to the 8th/14th century historian Ḥamd Allāh Mustawfi, the amir Āḥmad (II) b. Ismāʿīl changed the language of official business from Persian to Arabic, but the measure was unpopular and had to be rescinded. Thereafter, the two languages doubtless existed side-by-side in administrative usage. Of course, Arabic retained its primacy in the spheres of religion, learning and science. The achievements of the Sāmanid period in Arabic scholarship were very considerable, with Bukhārā and Samarkand as centres for literary activity under the patronage of the amirs themselves, as the plethora of poets and prose stylists appearing in the fourth kism of the Khurāsānīan author Abu Mansūr 'Abd al-Malik al-Ūṣalībī's [q. v.] literary anthology, the Yātimāt al-dahr, that on the Arabic littératours of Khurāsān, Transoxania and Khwārazm, shows (see V. Tanner, in Camb. hist. Iran, iv, 589-93).

But the 4th/10th century is notable for the florescence under the Sāmanids of a lively New Persian literature, one whose roots lay in the preceding century and whose poetic production came to a remarkable stage of maturity and expressiveness with such authors as Rūdkā, Dākikī and Abu 'l-Ḥāsān Khwānīšāt of Marw [q. v.]. This development of New Persian literature both in the Sāmanid dominions and at the other petty courts of the East does not necessarily imply promotion of this by the amirs or princes as a conscious, proto-nationalist Persian policy (although the Sāmanid amirs were undoubtedly interested in this, see below; one of the last rulers, Mansūr (II) b. Nūḥ, is included by ʿAwfī amongst the rulers who composed Persian poetry, examples of which he gives, see his Lūbāb al-alabāb, ed. Ṣāʿīd Nafṣī, Tehran 1335/1956, 23-4) but reflects rather the distance of Khūrāsān, Transoxania and Bukhārā from the kipalities from the focus of Arab-Islamic life in the central lands of the caliphate, and also the vigorousness of Persian culture in the East, always strong at the local level. Certainly, it was the dīḵān class there which nurtured and cherished the old Persian epic traditions; this is especially clear in the case of the lord of Tūs, Abū Mansūr Muḥammad b. 'Abd al-Razzāḵ, who in 346/957 commissioned the translation of Pahlavi texts of the national epic into New Persian, and these were utilised by Firdawṣī [q. v.] for his Shāh-nāma and also, it seems, for the earlier, unfinished verse rendering (known from Firdawṣī's incorporation of it within his own work) by Dākikī (see V. Minorsky, The older preface to the Shāh-nāma, in Studi in onore di Giorgio Levi della Vida, Rome 1956, ii, 139-79; G. Lazard, La langue des plus anciens monuments de la prose persane, Paris 1963, 36-7). This New Persian literature of the Sāmanid period involved not only poetry but also prose, including prose versions of the national epic such as that of Abu 'l-Mu'ayyad Bāln, known from fragments (written in the reign of Nūḥ (II) b. Mansūr); Persian translations and epithomes of al-Ṭabarī's History (made for Mansūr (I) b. Nūḥ by his vizier Abu 'l-Ḥaṣām Ṣalā'āmī [q. v.]) and of his Kur‘ān commentary (also done in this reign by a group of scholars); etc. (see Lazard, op. cit., 38 ff.; idem, Les premiers poètes persans (IX-Xe siècles), Tehran-

The economic strength of the Samanid state lay, as noted above, in the flourishing agriculture of the populous river valleys and oases of the region, and also in the craft industries of the towns and the commercial connections of the Samanid lands. These last lay at the southern end of trade routes coming from the Inner Asian steppes and, ultimately, from China, so that the Samanids could mediate the products of these distant lands to Baghdad and other great centres of consumption in the central lands of the caliphate. Until the later 4th/10th century, when internal strife amongst the rival Turkish commanders and their strifes with the amirs set in, disorders completed by the Karakhanid invasions, the Samanid lands generally enjoyed internal peace and freedom from external attack. Local industries and crafts could flourish, such as the irsiz [q.v.] workshops of Bukhara, whose embroidered textiles were used, so Narshakhi says, for payment of annual tribute to the caliphs (? in the earlier period of Tahirid suzerainty over Transoxania), the famous paper production in Samarkand, started by captured Chinese artisans [see Kakhod], arms and weapons from the metal industry of Farghana, etc. Various of the imports from the steppe and forest lands to the north, i.e. western Siberia and Russia, including furs, hides, honey, wax, cattle on the hoof, etc., exchanged for the textiles, leatherwork, grain and fruits of Transoxania, are listed by al-Mukaddasi (tr. in Barthold, Turkistan, 235-6). Above all, Transoxania benefited from the trade in Turkish markets in frontier towns like Isfandjab and Shash or slaves, brought to the slave markets in Transoxania and sold in Baghdad and other great centres.

As a result of this buoyant economic and commercial atmosphere, the revenues of the Samanid lands amounted to 45 million dirhams (within this, so Narshakhi records, the land tax of Bukhara and Karmina yielded 1,168,566 dirhams). The amirs themselves took over extensive estates from the Bukhara-khudos as personal domains (khassa), and groups like the sayyids of the Alids and other ulama held much land in waqf. The evidence of the existence of the army and the bureaucracy, which were, according to Nizam al-Mulk (speaking of “former kings”, i.e. the Samanids and Ghaznavids), paid in cash. However, there are signs of the beginning of the practice of granting out lands as assignments [see ırtak], already known in ’Irak and western Persia, so that revenues were subtracted from the central treasury; the Ghaghanis held extensive estates on the upper Oxus, and the Simghuris in Khusistan (cf. Barthold, op. cit., 238-9). It seems that the old Persian dhikhân class began to decline in both Khurasan and Transoxania during the Samanid period, parallel to increased centralisation in the state and a movement of population from the countryside to the towns; the factors at work here were doubtless complex, but it is true that we hear little of the dhikhân as a landowning class in the ensuing Karakhanid and Sajidkh periods, and the actual word dhikhân [q.v.] begins its semantic decline into the modern Persian meaning of “peasant” (cf. Frye, in Camb. hist. of Iran, iv, 152-3).

Consideration of the Samanid financial and economic situation is also bound up with that of their coinage. The amirs were fortunate to control some of the best silver-producing veins in the eastern Islamic world, sc. in Badakhshan and Farghana, and the sheer volume of coinage minted, and especially that in silver, is impressive. G.C. Miles enumerated no fewer than 47 mint places known to have issued coins in the name of the Samanids, not only—as one would expect—in Transoxania and Khurasan—but as far afield as Sitran, Fars, Djibah and the Caspian region, as the result of military campaigns there or of alliances with local potentates (see Camb. hist. Iran, iv, 374). A vast quantity of this coinage found its way outside the Islamic world into Siberia, northern Russia, Scandinavia and the Baltic shores, and even as far as the British Isles and Iceland, apparently as a result of trading operations which are not precisely to have been largely discontinued in the opening years of the 5th/11th century. The whole topic of this apparent one-way drain of Samanid silver northwards and westwards has been much discussed by both economic historians and numismatists, but remains substantially unexplained. Amongst the extensive literature here, see e.g. J. Duplessy, La circulation des monnaies arabes en Europe occidentale du VIII au XII siècle, in Revue Numismatique, sér. 5, vol. xviii (1926), 101-63; T. Lewicki, Le commerce des Samanides avec l’Europe orientale et centrale à la lumière des trésors de monnaies coufiqes, in D.K. Koyumjan (ed.), Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles, Beirut 1974, 219-33; A.E. Lieber, Did a “silver crisis” in Central Asia affect the flow of Islamic coins into Scandinavia and eastern Europe?, in Commentationes de nummis sas, s, sc. in Suecia repertis, N.S. 6, Sigtuna papers, Stockholm 1990, 207-12.

2. Art and architecture. Although history and literature are fairly well documented, no clear picture exists of artistic achievements under the Samanids. The fertile oases under their rule are on the fringes of Inner Asia, a north-eastern times for the Iranian world. The early caliphs wrested the eastern part of the area from Chinese suzerainty; over the centuries these lands have remained at the crossroads of trade routes and influences.

(a) Applied arts. Ceramics. They are the best testimony of Samanid craftsmanship, as in the finds of Achariya/Samarkand and Niğhpâr. Dating of the material is still not clear; the later rule of the Karakhanids could be responsible for some of it. The pre-Islamic red body earthenware serves as support to white, black or russet slips and their decor under the new transparent lead glaze. When no slip is used, as in Niğhpâr, the body takes on a buff colour under the glaze. The decoration draws on five sources. First, the new but soon assimilated Arabic calligraphy painted in near black manganese. Second, the possible influence of late T’ang bichrome, copper green with iron brown or yellow, but not the earlier three-coloured
décor; there are no shapes nor designs recalling Chinese originals. Third, strong echoes of textile designs ranging from stripes, triple dots, dotted circles and peacock-eyes to roundels containing birds, figures, chiefly in Nishapur: hunters on horseback, seated rulers and dancers, all surrounded by fantastic animals and birds. Would they also be survivors of earlier times in a society becoming more and more Islamicised?

Thus dishes up to 45 cm wide, with a small or large cavetto, are usually covered in a white slip; they recall the new manufacturing of paper; this white ground acts as an ideal support for calligraphy. Ewers, bowls, often with a double recessed base, lamps, inkwells, even toys, all are coloured with a mixture of metal oxide and fine white clay; the mixture prevents the design from running under the transparent glaze. The use of a russet/orange colour points to the red of later Iznik pottery. When colour is required to run, no fine clay is added to the oxide. As for sgrafitto, it appears to be an original means of decoration and is used as a visual counterpoint for the colour runs, usually green, yellow and purple in a dense patterning for large dishes and bowls. Unglazed wares consist of long-necked ewers, some with filière, jars, gourds, cooking pots, oven shapes and moulds.

Glass. In the finds of Samarkand, bottles are either freely blown or, when a pattern is required, mould-blown to produce a lattice or twisted pattern. The ewers are not unlike their ceramic counterparts; spoons and inkpots can be added to the list of shapes. Green and turquoise are the usual shades with the occasional blue or amber bottles, bowls, bangles and beads.

Metalwork. Since most metals were available in Khurâsân and Transoxiana, the important metal industry of pre-Islamic times was carried over and adapted to the taste of the new rulers, although precise dating is still hazy. Early Arab governors of Khurâsân sent gifts of silver and gold vessels to the caliph in Baghdad, as well as bowls and jugs of high-tin bronze. The latter, safîdruy, with its appearance of silver, was a good substitute for precious metals. Cast objects of copper such as ewers, buckets and braziers, were of daily use. In archaeological finds, household objects like lamps, jugs, flat-bottom bottles, ewers, incense burners, some in the shape of a stupa, spoons and weights, were made of bronze. Bronze was also used for more personal items like rings, tweezers, mirrors and kohl sticks. Iron was used for sword, dagger and shovel blades, as well as for arrowheads.

Textiles. Already in Sâsnâid times, local silk and cotton provided the yarn for goods appreciated well beyond the area. Early after the Islamic conquest, tributes of garments were sent to Baghdad from Khurâsân. The dirâz [q.v.] factories of Nîshâpur and especially Marw produced very soft cotton fabrics as well as sbrîjum and jazî silk. The only surviving silk from this period is the remarkable compound twill known as the shroud of Saint Josse [see harîs]. Its inscription reads "izzi wa-ikbâl li 'l 'arb'd Abû Mansûr Bahk-

1030 SAMÂNIDS

decor; there are no shapes nor designs recalling Chinese originals. Third, strong echoes of... in Tashkent. A small number of single-domed tombs in baked brick illustrate the possible evolution of such construe-

designs ranging from stripes, triple dots, dotted circles earlier times in a society becoming more and more in Egyptian lustreware. Communities of Nestorians and Syriacs still existed, as did also Manichaeans and Buddhists, the latter manifest in the overall pattern of a lotus base inside dishes. And fifth, paintings of Buddhists, the latter manifest in the overall pattern of... (b) Architecture. The dearth of 4th/10th-century surviving monuments underlines the attitude of later Islamic rulers to the buildings of previous dynasties. Mud brick is still the basic building material in the area. Remains of impressive walls with an outward corrugated surface, visible in Marw, suggest the importance of main towns and the need to protect them, though in the capital Bukhârâ, the Rîgîstân, a large square, lay outside the pre-Islamic town, surrounded by ten divânās to the west of the well-fortified citadel. Stucco remains from palaces and affluent houses still have traces of painting. Large bazars sheltered commerce and industry. Towards the end of the Sâmnâid period, the town proper, unable to absorb the growing population, had become an unpleasant maze of filthy streets. Traces of early caravanserais survive along the trade routes and by the banks of the Oxus and the Jaxartes.

After the Muslim conquest, baked brick, seemingly a Mesopotamian tradition, was preferred to mud brick for mosques, tombs and important civic buildings. Yet in such buildings as the Nuh Gunbad ("nine domes") mosque in Balgh, while the structural elements including the six massive columns (1.56 m in diameter) were of baked brick, the walls were still made of mud brick. The almost square structure (20 m²), open on one side opposite the kibla wall, is entirely plastered and decorated with carved stucco. Spacious grid systems enclose palmettes, leaves, cones and buds not unlike those in Nîshâpur, Aftasîyab or Sayad near Dughânbe, but in a more attractive manner than in the possibly contemporary mosque of Nâ'în [q.v.] in Persia. In the Deggaron mosque of Hazârâ near Bukhârâ two series of three domes cover the building, the kibla domes being higher than the three others. Inside, the columns are less squat and the intrados of the arches broadly pleated; the domes sit on pendentes. The great mosque in Khiwa echoes the other older tradition of an hypostyle hall with wooden columns and carved capitals, four of which have early inscriptions. More wooden carvings have survived in the shape of a cusped-headed mihrâb from Iskandarabad in the Zarafshan valley, now in the Dughânbe Museum, and a capital from the mosque in Obburdan, now in Taghstân.

A small number of single-domed tombs in baked brick illustrate the possible evolution of such construc-
tions: the so-called tomb of the Samanids in Bukhāra, a domed square with four entrances, patterned brickwork and corner arches, and the ʿArab-Ata mausoleum in Tim, dated 367/977, with only one entrance and an open arcaded façade, complete with brickwork and corner arches in smoother patterns. If the inscription of the Shīr Kabīr mausoleum at Maḥḥad-i Miṣṭiān in Dihistān allows for a late 4th/10th century dating, then part of its zone of transition with its four receding arches could be later than its carved muhrab and niche. Finally, with the restored Mir Sayyid Bahram mausoleum at Kana ṭīn, between Samarkand and Bukhāra, appears an early suggestion of a pishtāq [q.v.] or raised portal; it emphasises the doorway with a design of arches and frames. By the end of the period, baked brick with its new building possibilities, has asserted itself.

**SAMANNŪD.** A town of the Delta in Egypt, in the Ghharbiyya province and on the western bank of the Nile (Dimyān/Damietta branch), 8 km/5 miles east of the town of al-Mahalla al-Ḳubrā [q.v.]. It is an old town, with the name in ancient Egyptian of Ṭab nutir, i.e. holy place. Greek documents call it Σαμαννοῦ, whence the Arabic name, and in Coptic it was known as Σαμάνη (Djemnuit).

Samanṇūd had a very ancient Christian tradition. Athanasius states that the town had a Melkite bishop in 352 and that the town's name often figures in the old martyrological literature. We know e.g. that the martyr St. Anub passed through Samanṇūd when coming from Atrib, where he had found the town's churches destroyed and a temple built in their place. In the 14th century, when the Synaxarion had already been put together, the body of Anub was at Samanṇūd, and there has always been a church in the town dedicated to St. Anub.

Arabic geographers like Ibn Khurraladhībih and al-Yaḳūbī mention the town in the 3rd/8th century, and in the 6th/12th century al-Idrīsī describes its lively commercial activity. From the Fāṭimid period, and after Badr al-Djamall’s administrative reorganisation, an independent province called al-Samannūdiyya was set up.

In modern times, an administrative district was set up in 1826 called the ism of Samannūd, with its chef-lieu in the town, and after 1867 it was styled the markaz of Samannūd. In 1882 this last was, however, abolished and the district and its administration transferred to al-Mahalla al-Ḳubrā. In 1928 it was re-established, and then, because of struggles between political parties, it was abolished three times in less than 7 years until it was definitively re-established in 1935, with the town of Samannūd as chef-lieu of the district.

**SAMARITANS** [see al-samīra].

**SAMARKAND, an ancient city of Transoxania, the Arabic Maš warāʾ al-Nahr [q.v.], situated on the southern bank of the Zarafshān river or Nahr Șughd. In early Islamic times it was the first city of the region in extent and populousness, even when, as under the Sāmānids (3rd-/4th-9th/10th centuries [q.v.]), Bukhārā [q.v.] was the administrative capital.** Samarkand’s eminence arose from its position at the intersection of trade routes from India and Afghanistan via Balkh and Tirmidh [q.v.] and from Persia via Marw [see Maw al-Mawāmid] which then led northwards and eastwards into the Turkish steps and along the Silk Road to eastern Turkestan and China; but above all it flourished because of the great fertility of the surrounding district of Soghdia or Șughd [q.v.], the highly-irrigated basin of the Zarafshān which could support a dense agricultural population (see Barthold, *Turkistan down to the Mongol invasion*, i 83 f.).

1. History

   The city—the second part of the name of which contains the Eastern Iranian word for “town”, kand, frequent in Eastern Iranian place-names (cf.
1. Slip-painted dish, W: 46.8 cm, H: 6 cm. 52.11. Courtesy of the Freer Gallery of Art, Smithsonian Institution, Washington, D.C.

Buddhist-Soghdian kand-, Christian Soghd. kanth), while the first part has not yet been satisfactorily explained (cf. the attempts by Tomasech, Centralasiatische Studien, i, Soghdiana, in SB Ak. Wien, lxviii [1887], cf. 297 ff.) led to the first finds while Arab legends of Alexander's campaigns in the east as Maracanda, Maroqadda, whose site at Tepe Afrasiyab yielded it Hellenistic archaeological evidence (see P. Bernard, Alexandre et l'Asie Centrale, in St. Jr., xix [1990], 29-32). Arrian (iii, 30) calls it βασιλεία τῆς Σογδιαίων χωρῶν. Alexander occupied it several times during the fighting with Spitamenes and, according to Strabo (xi, 4).), led to the first finds while Arab legends make him, as well as the Tubba' [q.v.] king Shâmir Yur'ish, founder of the city). Under the Diadochi—after the partition of 323 BC—as the capital of Sogdiana, it belonged to the satrapy of Bactria and was lost to the Seleucids with Bactria when Diodotus declared himself independent and the Graeco-Bactrian kingdom was founded during the reign of Antiochus II. The Harding, it was exposed to the attacks of the northern barbarians (cf. PW, xiv/2, art. Marakan-da, cols. 1421-2). From this time up to the Muslim conquest it remained historically and economically separated from Persia, although cultural intercourse with Western lands continued. (On the settlement of Manichaean in Samarkand, cf. J. Marquart, Historische Glossen zu den alttürkischen Inschriften, in WZKM, xii [1890], 165; the attempts made by E. West to refer the Sin in Sogdian in the Budzhishin and Bahmaniyaht to Samarkand are very unsatisfactory.) The only positive information is given by Chinese imperial historians and travellers (of which the former are unfortunately for the most part only available in obsolete translations). From the Han period the kingdom of K'ang-Ku is mentioned, whose chief territory, K'ang, is definitely identified in the Tang Annals with Sa-mo-kiian = Samarkand (cf. the passages in C. Ritter, Erdkunde, vii, 6’ 57 ff.). According to the Annals of the Wei, compiled in 437 AD (cf. F. Hirth, in Marquart, Die Chronologie der alttürkischen Inschriften, Leipzig 1898, 65-6), the Cau-wu dynasty related to the Yüe-či (Kuqhan) had been reigning here since before the Christian era. Hüen-tang visited Sa-mo-kian in 630 AD and briefly describes it (St. Julien, Memoires sur les contrées Occidentales, i, Paris 1857, 18-26; S. Beal, Shi-yu-ki, Buddhist Records, i, 1884, 32-3, with valuable bibliographical note on p. 101).

The Muslim Arabs do not appear for certain in the affairs of Samarkand until the time of the governor of Khurāsān Kutabay b. Muslim [q.v.], the alleged tomb at Afrasiyab of the Śah-i Zinda, the Prophet Muhammad's cousin Kutham b. al-Abbas [q.v.], who was supposed to have been in Samarkand in 56/676 (cf. Barthold, Turkestän, 91-2), must have appeared later as part of a family cult inaugurated by the 'Abbāsid after they came to power in 132/750, possibly adapting a pre-Islamic cult on this site. The Iranian ruler Hārūn-ar-Rashid to have restored it after it had fallen into decay (al-Ya'qubi, Buldan, 293, tr. Wiet, 110). The rebel against the central government Rāfic b. al-Layth [q.v.] began his outbreak in Samarkand in 190/806 by killing the governor there and seizing the city, holding it until he surrendered to al-Ma'mūn in 193/809 (al-Tabari, iii, 80, tr. J.A. Williams, Albany 1985, 203), and Hārūn-ar-Rashid to have restored it after it had fallen into decay (al-Ya'qubi, Buldan, 293, tr. Wiet, 110). The rebellion against the central government Rāfic b. al-Layth [q.v.] began his outbreak in Samarkand in 190/806 by killing the governor there and seizing the city, holding it until he surrendered to al-Ma'mūn in 193/809 (al-Tabari, iii, 707-8, tr. E. Bosworth, Albany 1989, 259-61). It is also from the early 'Abbāsid period that we have the first Islamic coins issued from Samarkand, beginning with issues of 142-4759-82 (E. von Zambaur, Die Münzprägungen des Islam, zeitlich und örtlich geordnet, i, Wiesbaden 1968, 148-9).

At the command of al-Ma'mūn, the governor of
Khurāsān Ghassān b. Abbād in ca. 204/819 allotted to the four sons of Asad b. Sāmān-Khudā various cities of Transoxiana and eastern Khurāsān as governorships, and Nūh received Samarkand. On his death in 217/832 the city reverted to Bukhārā and was then re-taken by the control of his brother Ahmad (d. 250/864), whose copper fulās were struck there from 244/858 onwards. With the collapse of Tahirid authority in Khurāsān under Saffārid attacks, Naṣr b. Abbād found himself virtually independent ruler of Transoxiana with his capital at Samarkand. However, his brother and eventual vanquisher Ismāʿīl, progenitor of all the future Samanid dynasty, was not yet to arrive. Kāthulī, laqṭīf al-maʿārif, ed. al-Abāyīrī and al-Safāyī, 218, tr. Bosworth, The Book of Curious and Entertaining Information, Edinburgh 1968, 140; and see kāhmad). It was, moreover, a centre for scholarship. The great Ḥanāfī theologian al-Māturīdī (d. ca. 335/944 [q. v.]) stemmed from the Māturīd quarter of Samarkand, his tomb in the city being still shown in the 9th/15th century, and another Hanafī theologian Arabic by the famous theologian Abu Ḥafs Umar b. Thālībī, lāqīf al-maʿārif, ed. al-Abâyirī and al-Safrī, 218, tr. Bosworth, The Book of Curious and Entertaining Information, Edinburgh 1968, 140; and see kāhmad). It was, moreover, a centre for scholarship. The great Ḥanāfī theologian al-Māturīdī (d. ca. 335/944 [q. v.]) stemmed from the Māturīd quarter of Samarkand, his tomb in the city being still shown in the 9th/15th century, and another Hanafī theologian and Kurān commentator was Abu ʿl-Layth al-Samarkandī (d. towards the end of the 4th/10th century [q. v.]). Unfortunately, the local history written in Arabic by the famous theologian Abū Ḥafs Umar b. Muḥammad al-Nasāfī (d. 357/1162-3 [q. v.]), the Kitāb al-Kandī maʿrifat ʿulamdī Samarkand, which dealt with the shrines and graves of local scholars and also with some of the city's historical events, has come down to us only in an abridgement of a Persian translation (see Storey, i, 371; Storey-Bregel, ii, 1112-15; Barthold, Turkestan, 15-16).

It is to the heyday of the Sāmānids, the 4th/10th century, that the descriptions of Samarkand by the geographers al-İstakhri, Ibn Hawkal, al-Mukāddasī and the author of the Ḥudud al-ʿtlām refer. They show that Samarkand was a typical triple citadel formation of Iranian towns: a citadel (kuhandīz, arabicized kuhandīz or translated kaʿba), the town proper (gāhristān, gāhristān, madīna) and suburbs (rabād). The three parts are here given in order from south to north. The citadel lay south of the town on an elevated site; it contained the administrative offices (dar al-ınāma) and the prison (kaʿba). The halves, on which the houses were built of clay and wood (cf. E. Herzfeld, in Islam, xi, 162, and E. Diez, Persien, i (Kulturen der Erde, xx, Hagen-Darmstadt 1923), 20), was also on a hill. A deep ditch (kbondak) had been dug around it to obtain the material for the surrounding earthen wall. The whole town was supplied with running water, which was brought from the south to the central square of the town called Raʾs al-Ţab as an aqueduct, a lead-covered artificial channel (or system of lead pipes?), running underground. It seems to have dated from the pre-Islamic period as its supervision, as is expressively stated, was in the hands of Zoroastrians, who were exempted from the poll-tax for this duty. This aqueduct made possible the irrigation of the extensive and luxurious gardens in the town. The town had four main gates; to the east, the Bāb al-Sin, a memorial of the ancient connection with China due to the silk trade; to the north, the Bāb Bukhārā; to the west, the Bāb al-Nawwābah, which name, as in Bukhārā and Bāb Khākh, points to a (Buddhist) monastery; and to the south, the Bāb al-Kabīr or Bāb Qīṣāh (bāb stands for the Persian darvāza). The lowering-lying suburbs adjoin the town, stretching towards the Zaraftūn and surrounded by a wall with 8 gates. In them lay the majority of the bazaars, caravanserais and warehouses, which were rare in the city itself. The government offices of the Sāmānids and the Friday mosque were in the city itself. See al-İstakhri, 316-23; Ibn Hawkal, ed. Kramers, 491-501, tr. Kramers-Wiet, 472-9; al-Mukaddasī, 278-9; Ḥudud al-ʿtlām, loc. cit.; al-İstakhri, Lāqīf al-maʿārif, 217-19; tr. Bosworth, The Book of Curious and Entertaining Information, Edinburgh 1968, 140-1; Yākit, Buldūn, ed. Beitr, iii, 246-50; al-Kazwīnī, ʿAṭār al-bilād, 395 ff.; Le Strange, The lands of the eastern caliphate, 460, 463-6.

Samarkand was, together with Bukhārā, occupied by the incoming Kārkhāndīs in 382/992, and with the defeat of the last Sāmānī, İsmāʿīl b. Nūḥ al-Muntazīr [q. v.], in 394/1004, passed definitively under Turkish control. In the second quarter of the 5th/11th century it became, under ʿAlī b. Hārūn Boghra Khân, called ʿAlītīgin [q. v.], and then under the parallel line of the descendants of the Ilī Naṣr, the eventual capital of the western khānate of the Kārkhāndīs, covering Transoxiana and western Farghāna [see tīlī ḳīrās]. With such rulers as Shams al-Mulk Naṣr b. Tamghā Khān İbrahim, Samarkand became in the later 5th/11th century a splendid cultural and artistic centre. The city also became a regular mint centre for the Kārkhāndīs. But after the battle of the Katwān Steppe in 536/1141, when the Seldjuk sultan Sāntār [q. v.] and his vassal Mḥmūd b. Muḥammad Khān were decisively defeated by the pagan Kara Khitāy [q. v.], Samarkand and Bukhārā became the centre of a reduced Kārkhāndī principality under Kara Khitāy overlordship. It nevertheless continued to flourish commercially, and in ca. 1170 the Spanish Jew writer Benjamin of Tudela visited Samarkand and allegedly found there 50,000 Jews (M.N. Adler, The itinerary of Benjamin of Tudela, London 1907, 59. The last Kārkhāndī in Samarkand, ʿUḥmān Khān b. İbrahim, was executed by the Khārāz̄am-Shāh ʿAlī al-Dīn Muḥammad [q. v.] in 608/1212, and the city occupied by the Khārāz̄am-Shāhs. Later, the Mongols of Ğingiz Khān [q. v.] reached Transoxiana, and after conquering Bukhārā in 616/1220, they arrived at Samarkand, the concentration-point for the Khārāz̄am-Shāh’s forces, in the spring of 617/1220. The city fell after a five days’ siege (Rabiʿ I 617/May 1220, or possibly Muharram 617/March 1220). After it had been devastated, some of the citizens were allowed by the Mongols to return after payment of a ransom of 200,000 dinārs (Djouwaynī-Boyle, i, 115-22; Barthold, Turkestan, 411-14).

For the next century-and-a-half, Samarkand was only a shadow of its former self. The Taʾistit hermit Chʿang-chʿun (travelled in Western Asia 1221-4) states that there were 100,000 families in the city before the Mongol sacking, but only a quarter of these remained in Shī-]%ī-se-kan after that (E. Bretschneider, Mediæval researches from eastern Asiatic sources, London 1910, i, 76-9; on the form Shī-]%ī-se-kan, cf. the Latin travellers’ Semiscant and Clavijo’s Cimesquinte, Yule-Cordier, Cathay and the way thither, iii, 39). In the mid-8th/4th century, Ibn Battūta found the population much reduced, and the city ruinous and without a wall (Rihla, ii, 51-2; Gībī, ii, 367-9).

The revival of the town’s prosperity began when Timur [q. v.] after about 771/1369 became supreme in
Transoxania and chose Samarkand as the capital of his continually-increasing kingdom, and began to adorn it with all splendour. In 808/1405 the Spanish envoy Ruy Gonzales de Clavijo visited it in its new glory (see B. de Herrera, Spanish-Russ. encl. his itinerary by I.S. Sreznevskiy in the Shornik otd. Russk. Yz., xxviii [1881], 325 ff.; Eng. tr. Le Strange, *Narrative of the Spanish embassy ...* 1403-1406, London 1928). He gives Cinesifonda as the native name of the town, which he explains as *aldea gruesa* “large (lit. thick) village”; in this we have an echo of a Turkish corruption of the name of the town based on a popular etymology which connects it with *šimţ* “thick”. The Bavarian soldier Johann Schiltberger seems also to have been in Samarkand at this time (Reisebuch, Stuttgart 1885, 61, Eng. tr. J.B. Teller, London 1879). Timur’s grandson Ulugh Beg (d. 853/1449) *q.v.*) embellished the city with his palace Çihâl Sutun and built his famous astronomical observatory there; on him, see W. Barthold, *Ulugh-Beg*, in *Four studies on the history of Central Asia*, ii. Leiden 1958. A very full description of the city in Timur’s day, which may just be described as classical, is given by the memoirs of Bâbur (*Bâbur-nâma*, ed. Ilminski, 55 ff.; ed. Beveridge, 54 ff.; French tr. Pavet de Courtelie, i, 96 ff.; Eng. tr. Beveridge, 74-86; Çaghatay (in transl.) and Persian ed. and tr. W.M. Thackston, Cambridge, Mass. 1993, 90 ff.), who captured Samarkand for the first time in 903/1497 and held it for some months. In 906/1500 it was occupied by his rival, the Ozbeg Shxbâni Khân. After his death, Bâbur, in alliance with the Shxbâni Şafawid Ismâ’îl Shâh, succeeded in 916/1510 in once more victoriously invading Transoxania and occupying Samarkand, but by the next year he found himself forced to withdraw completely to his Indian kingdom and leave the field to the Ozbeg. Under the latter, Samarkand was only the nominal capital and fell completely behind Bukhârâ.

During the 18th century, Samarkand fell into severe economic decline and in the middle years of that century was virtually uninhabited. However, when the extension of Russian Imperial power into Central Asia accelerated in the later 19th century, Samarkand was occupied by Russian troops under General K. Kauzen in November 1868 and a treaty of vassalage imposed on the amir of Bukhârâ, within whose territories Samarkand had fallen. The city was now detached from the Turkestan Autonomous SSR in 1930. Since 1990 it has come by Tashkent [q.v.] to the wakf of the Shâh-i Zinda “the living prince”, which Samarkand was at first the capital but replaced of those making up the Turkestan Autonomous SSR in 1918, and then in 1924, part of the Uzbek SSR, of which Samarkand was at first the capital but replaced by Tashkent [q.v.] in 1950. Since 1990 it has come within the Uzbekistan Republic. The modern city (Lat. 39° 40’ N., long. 66° 58’ E., altitude 710 m, 2,330 feet), an important centre for the processing of foodstuffs and for industry, had in 1970 a population of 257,000 (see BSE*, xxii, cols. 1571-7).

2. Architecture.

Archaeologists refer to the ruins of Samarkand as Afrasiyâb after the destruction of the town by Chingiz Khân [q.v.] in 617/1220. A museum on the site preserves fragments of stucco ornament and ceramics (see Sâmanids. 2). Thereafter, under Timur and his successors, the earlier southern suburbs of the town became the new Samarkand with its striking ceramic revetment and typical modular architecture. The shrine of Kuţham b. al-‘Abbâs [q.v.] known as the Shâh-i Zinda “the living prince”, had survived on the southern slopes of Afrasiyâb. Recent excavations, particularly those directed by N.B. Nemtseev in 1962, have revealed the base of a 5th/11th-century minaret in the north-west corner of the shrine as well as an earlier mausoleum, the underground mosque and a semi-underground chamber, all reflected in the later renovations. The south-eastern corner of a madrasa, possibly a funerary construction, was excavated to the west and opposite the shrine, if a *wâqf* of the Karâkhânid İbrâhîm b. Nasr Tamghâe Bughra Khân dated Radjab 458/June 1066, relates to it.

The Shâh-i Zinda ensemble. Cemeteries developed around shrines of holy men. Here mausolea are like scattered jewels with the shimmering of their blue-turquoise tile glazing enhanced with bichrome bands in white and black or turquoise. A series of tombs, with portal and domed room, lines an ancient north-south alley, while the shrine itself stands at its top northern end. Its lower section, off-centred to the east, overrides the old walls of Afrasiyâb. The two main 9th/15th century *lahâr ftaks* emphasise the entrance to the shrine (CT1) and the lower southern monumental entrance (CT2) to the whole alley; a subsidiary one (CT3), late 18th century, stands at the top of steps. Its southern face (CT1) carries remains of ten-pointed star vertical panels in tile mosaic which include hexagonal terra cotta elements around the stars.

1. The shrine, entered through delicately carved wooden doors (806/1403-4), consists of (a) a mausoleum *gir-khâna*, (b) a *ziyârdât-khâna* (735/1334-5), (c) a *masjid* (15th century), (d) a minaret (11th century), (e) an *ambulatory/miyaân-khâna*. The original mausoleum with its tiled *muqarnas* and dome in blue and turquoise, was in (b). The *masjid* stands over the older one, the *mihrab* inscription in tile mosaic, quotes surâ II, 139.

2. At the southern end of the ensemble, the monumental entrance with *hasârâh*, “a thousand weave” decoration, is dedicated to Ulugh Beg’s son, ʿAbd al-ʿAzîz (838/1434-5), and leads into the *lahâr ftak* (CT2). On its west side, a doorway opens into a contemporary mosque. The east door leads into a later *madrasa* (1225/1812-13).

3. An excavated anonymous mausoleum, 17th/13th century. The mausoleum of Khâdîja Aḥmad (1350s) remains the only surviving building to recall the older east-west road of the ensemble; it is “The work of Fakr [b.] Âlî”, and a variety of deep moulded glazed tiles enhance the portal: a band of calligraphy in white against a turquoise scroll, a frame of underglaze black painted star tiles with a turquoise glaze and a granîk, a “knot” decoration, in turquoise and unglazed terra cotta in the tympanum.

5. A mausoleum for an anonymous lady, earlier
The Shah-i Zinda, after Rogers.

known as ʿArab Shāh, perhaps one of Timur's first wives, Kutlug Aka (13 Safar 762/12 December 1361). A restored plinth and two steps under the portal lead into the mausoleum. There are similar colour harmonies and moulded glazed tiles, inside and outside tiled mukarnas, as in 4.

6. a.b.c.d. Excavated mausolea dating to the 1360s.

7. The mausoleum of Shād-i Mulk Aka (who died on 20 Djamādā II 773/29 December 1371) was built by her mother Turkan Aka (died 785/1383), Timur's elder sister. The calligraphy of the portal in Arabic refers to the building and the daughter, the Persian below the mukarnas praises the building. The Persian around the door frame mentions the "pearl" buried within. Three craftsmen have left their signatures, with unclear nisbas: Birr al-Din, Shams al-Din and Zayn al-Din. Here is to be seen the best-preserved tile decoration of the ensemble. The restored portal over the entrance was originally higher. Eight frames arise from a plinth of three square ornate panels; they are hemmed in on either side by deeply carved turquoise engaged columns. Two of the frames are larger, with calligraphic and star patterns enclosed in a risen border. Underglazed painted tiles of irregular shapes, in delicate turquoise and white on blue, fill the spandrels with leafy lotuses around a raised roundel. These tiles are also used for the large frame inscription and around the four carved and glazed panels of the inner portal containing a lotus-filled mīhrāb and an upper roundel. The mukarnas of the portal are echoed in those of the chamber, which measures about 42 m² and is all glazed with lotuses and leaves, small girākhās and mīhrābs; large roundels almost fill the tiled wall panels, three aside. Eight black and white ribbed panels, each containing a "tear-drop" motif, meet at the apex of the inner dome in an eight-pointed star. A feeling of lightness emanates from the decoration despite its dense patterning.

8. Only the portal remains of the mausoleum of Amir Husayn/Tughlūk Tekin, who died in 777/1376; he was one of Timur's generals. The vault goes back to the 6th/12th century.

9. The Amir-zade mausoleum, 788/1386, stands east of an earlier crypt and on the south side of 7. In a similar manner, two frames filled with turquoise moulded rosettes and calligraphic haft rang [q.v.] tiles, are enclosed in risen borders, the lower part being two haft rang tile panels. The slightly recessed entrance is three-quarters framed by a band of square tiles with moulded square Kufic (Muhammad and ʿAlī) based on minute lozenges of terra cotta, possibly gold originally, with a red dot or glazed in blue with turquoise and blue in fill, above it, a tympanum of hexagonal star-filled tiles encompasses two central panels in haft rang tiles. A ribbed inner single shell dome over a plain chamber over 38 m² was plastered in the 19th century.

10. An excavated mausoleum, late 8th/14th century.

11. The mausoleum is the work of Ustad ʿAlim-i Nasafi in the 1380s, with turquoise glazed plugs in its south brick wall; there is no trace of the outer dome, only a 16-sided drum of hazārhāf panels in black and turquoise. The ceramic programme is a mixture of old and new techniques and designs. The vertical panels of the portal strapwork recall the design on the base of the Djām minaret [q.v.], sūra CIX, 1; CXII; and CXIV, 2-3. The panels and stars within also contain glazed moulded Kufic inscriptions, mostly in white on a blue ground. Large floral haft rang tiles make up the inner panels and the corner engaged columns; yellow, pale green and light brown for red, now add to the general turquoise impression. A splendid turquoise girākh punctuates the border of the right outer wall. Rectangular panels filled with hexagonal tiles cover the walls of the shrine, and corner arches with mukarnas lead to a dome covered in strapwork girākh filled with the same hexagonal tiles, all of which create a suffused turquoise vision.

12. The mausoleum known as that of Ulugh Sultan Begum, was built in the 1380s over part of the 5th/11th century madrasa. A roofless portal survives with lāğıward (dark blue) tile panels, and framed and moulded turquoise glazed narrow girākh containing small lāğıward tiles. A combination of calligraphic tiles in gold and white against a leafy scroll survives on the front. The red cinnabar, now visible, was originally hidden by the gold leaf décor. The use of dark blue
and gold, recalling Chinese textiles, appears here for the last time.

13. The mausoleum of “Amir Burunduk”, dated to the end of 8th/14th century, adjoins the Tuman Aka complex to the south. Only the right side of the portal remains with its hazarhāf pattern. Nine burials were found in the crypt, as well as some textiles.

14. “This is the tomb of the great and noble queen, Shirin Bika Aka, daughter of Taraghay, 787/1385-6” [4]. Taraghay was the sister of Timur. The mausoleum has the earliest double-shell dome with an outer bold hazarhāf pattern and remains of tile mosaic panels on the drum. The higher than usual portal, ca. 11 m, is decorated with a dense composition of calligraphic bands, arabesques and stylised flowers.

Blue remains the dominant colour, with added turquoise and white, and a touch of light brown. The 36 m² mausoleum rises to a total height of about 18 m. The dado is tiled with hexagonal green tiles with gold cranes in flight inspired by contemporary Chinese textiles. The rest is painted plaster with elongatedinar patterns filled with vegetal or stylised leave patterns.

15. The mausoleum with two hazarhāf walls and a tiled double dome ca. 15 m high, is attributed to Tūmān Aka (908/1405-6); set next to the undated mausoleum of Timur in the same lot. The tomb of Amīr Abū Sa‘īd Mahdī b. Haydār dated 733/1332-3 or 833/1429-30. Tile mosaics decorate the three entrances with blue and some black ground. In the inner entrance to the mosque, the ten-pointed star pattern meshes with a blue girih. This girih is lined in white, a well-known device of carpet designers when a motif requires enhancing. Other colours are green, light brown, turquoise and plain terra cotta. Intricate plaster mukarnas lead to the painted dome.

16. a.b.c.d.e. These excavated mausolea overlook the east-west road.

17. This octagonal mausoleum, with arch openings on all sides and crude hazarhāf décor, is dated to around 1440. It would have had a double dome. Remains of a plaster painted inscription can still be seen on the inside of the octagon ( sûra II, 256).

18. A 9th/15th-century excavated burial vault is sited west of 12.

19. The two turquoise tiled double-domed buildings of the so-called Kāḏī-zāde Rūmī mausoleum, built in the 1420s, stand out from afar with their larger part rising to 23 m. Hazarhāf patterns animate both drums, with a lādār inscription on the larger one. More patterning would have covered the south portal. Chambers were excavated to the west and east. The zone of transition and dome of the tomb chamber, almost 10 m², consist of elaborate plaster mukarnas; the crypt contained remains of a female in her mid-thirties. This is the only building in the ensemble with a feeling of space, partly due to unpatterned plain walls or dados of unglazed hexagonal tiles framed by blue glazed strips.

The mosque of Ḥadrat Khiḍr. Its name recalls the saint-protector of travellers and master of the water of life, Khiḍr [q.v.]. On the south slope of Afrāsīyāb, this summer mosque, with its wooden columns, overlooks the site of the Iron Gate and the road to Tashkent. Built in the 19th century with two small minarets and a squat dome on foundations going back to Soghdian times, it was restored in 1915 by ‘Abd al-Kāḏīr Bakiev.

Little remains of the citadel in the western part of the town. It contained the usual administrative buildings, the treasury, the armoury, the Cīhil Sūṭūn, the Gök Saray, and the palace with the Gök-Tash, a carved grey marble monolith which was used as a ceremonial throne.

Rūhābād, “The abode of the soul”, in mid-town. The shrine of Būrrān al-Dīn Saghārdji was built in the late 8th/14th century over the tomb of the gūykh, whose body was brought back from China by his son Abu Sa‘īd. The massive plain square tomb chamber is crowned by a dome on an octagonal zone of transition. Its dado consists of unglazed octagonal tiles separated by glazed black strips.

The mausoleum of Saray Mulk Khānūm is late 8th/14th century and possibly part of a madrasa. Its vanished portal briefly ralled that of Timur’s Masjid-i Djami 200 m away. The inner dome has gone; the semi-basement crypt in brick is cruciform like the main chamber. Despite its ruinous condition, a variety of tiles and paintings have survived.

The vast Masjd-i Djami is known as Bīb Khānūm (801-8/1398-1405) was started on Timur’s return from India; 95 elephants for the carrying of quarried stones were added to an immense task force. Its sahn measures 87 m by 63 m and the four L-shaped halls, with 480 columns, are linked by four portals, one of which, the entrance pīškāb [q. v.], rises to 41 m. At the opposite end of the sahn stands the mīrāb domed chamber in India the two lateral minor domed chambers were built between extra minarets. Built too fast, with a minaret at all four corners, the mosque soon began to deteriorate and was superseded in the 11th/17th century by the Tilla Kārī mosque on the Rigštān (see below). The 1897 earthquake hastened the collapse of the domes, but restoration work on a long-term basis was started in the 1970s.

Parts of the tile programme of the mosque were determined by its large size and recall that of the slightly earlier gateway to the Aḵ Saray in Shahri Sarb and the contemporary shrine of Khānūn Aḥmad Yasa‘ī in Turkestan. Large-scale hazarhāf patterns, with a dominant of turquoise, cover most parts of the surviving monument; six-sided haft rang tiles still fill the space of some spandrels, and complex tile shapes including twelve-sided ones, decorate part of the mīrāb dome. The restored portal as well as the plinth and dados of the main entrance are of carved stone. After the earthquake of 1875, the monumental Kūrān stand of carved marble was moved out into the sahn.

The madrasa and khānakh of Muḥammad Sulṭān and the Gūr-i Mīr. The remains of the madrasa and khānakh, on either side of a courtyard, were probably completed in 1401/1404 by Muḥammad Sulṭān, Timūr’s favourite grandson. After his death in Anatolia in 805/1403, Timūr had an octagonal mausoleum built for his remains, on the south side, known as the Gūr-i Mīr, “the World Master”. Its turquoise melon-shaped double dome soars to a height of 37 m. A gigantic Kūfī inscription “God is eternal” runs round the drum. Timūr was buried here in 807/1405 as well as later Timurids. Ulugh Beg added an eastern gallery to the mausoleum in 827/1424. Muḥammad b. Maḥmūd al-Bānā‘ī al-Isfahānī signed a concluding portal in 837/1434. An unfinished 11th/17th-century iwān still stands on the west side. The last standing minaret collapsed in 1903.

The inner room of the mausoleum, about 100 m², with its high cupola, has painted pendentes with gold leaf decoration; its dado, in onyx and further gaudy restoration in blue and gold, contrast with the dark nephrite of Timur’s cenotaph. The stone was brought by Ulugh Beg from Inner Asia in 828/1425
and is inscribed with Timūr’s genealogy. This and other cenotaphs are surrounded by a delicately-carved large patterns of the pishtak vary from enhanced square Kufic to bursting star motifs.

On the opposite side of the square, the master-builder ʿAbd al-Dżabbar built the Shīr Dör madrasa under İmām Kull of the Dżānids from 1028/1619 to 1045/1636. It is a fine example of the Ulugh Beg madrasa, despite the lions in the spandrels of the entrance pishtak, the melon-shaped domes and minarets on either side, and the lavish use of tile mosaics. The whole building, without a mosque, is slightly smaller than the Ulugh Beg madrasa although the imposing courtyard is bigger and allows two levels of blind arcades with rooms around it.

To its north-eastern side stands the polygonal Čahār Su built with bricks from the Bībī Khānum mosque at the end of the 18th century under Murād Khān of Buḫḥārā. This bazaar crossroad was famous for its hatmakers.

A short distance to the north-west of it has been re-erected in the 1880s the grey marble platform of the Shībānī dynasty with 31 inscribed tombstones. Between the two madrasas of the Rīgīsīn stands the Tīlkari “adorned with gold” madrasa (1066-70 1646-60). It is also a Dżānīd construction and combines the functions of a theological college and a masjīd-i ʿāmī. The mosque on its west side replaced the crumbling Bībī Khānum. The recent and lavish restoration has included the rebuilding of a new turquoise dome over the miḥrāb.

The observatory of Ulugh Beg, ʿAbd al-Rażāż al-Samarkandi records under the year 823/1420 the construction of the circular building 48 m wide, decorated with glazed bricks, and sited to the north-east of the town on the side of a rocky hill. Recent excavations have revealed at the centre of the inner hexagonal shape a deep stepped trench marked in degrees which was part of the gigantic sextant used for recording the movements of the planets and the stars. Contemporary texts mention shallow inner galleries on two floors above the ground floor service area, possibly painted with maps and charts if not decorative subjects. In the central area, and perpendicular to the wall of the sextant, stood a solar clock in the shape of a concave profile wall which would show up the shadow of the sextant.

The shrine of Čuptan Ata stands on the same hill as the observatory but farther to the east. It is a rather coarse-ly-shaped mausoleum with a tombstone in a 16 m² chamber without a grave below. The very high drum has chamfered sides with monumental Kūfic inscriptions in tiles. It could have been a place of popular pilgrimage in the 9th/15th century.

The mausoleum of the Ṭharrat khānā “The house of happiness” was built by Habība Sultan Begum, wife of Sultan Abū Saʿīd, as a mausoleum for a daughter, and is dated by its waqf to 869/1464. There are about 20 tomstones in the crypt. The double dome and high drum collapsed in 1903. The middle of the 28 m-long façade is dominated by a high pishtak which opens into the 64 m² tomb chamber; on both sides of it and beyond its four corners, steps lead to the next floor and its various rooms. The western side of the ground floor contains a mosque. All ten types of vaulting are elaborate systems of arch nets with flat profiles. What survives of the hażrābī decoration on the outer walls shows more restraint than earlier Timūrid architecture. A few haft rang stars and bands survive near the entrance. Inside, traces of blue and ochre painting of stylized vegetal motifs recall some of the painting in the mausoleum of Gawhar Shād in Ḥārāt. No gold now remains visible. Polychrome glass from the window was recovered in the excavations.

The ʿAbdī Dārūn “inside” ensemble was built in the 1440s to the south-east of the city near the Ṭharrat khānā. The mausoleum with its conical roof is set on foundations possibly going back to Sultan San-djar; with its adjacent chambers, it stands beyond the ḡānakāh which is domed by a large octagonal pool at the top of a long alleyway. On its eastern side was built a later wood-columned mosque as well as a madrasa south of it. The drum of the double-domed khānakāh has a bold Kūfic inscription; some tile mosaics survive within it. Mūṣizz al-Dīn b. Muḥam-mad Yaʿṣīk b. ʿAbdī, a descendant of the caliph ʿUīghmān, was supposedly a kādī in the Samarkand of the 3rd/9th century.

The Ak Saray mausoleum. This now stands on its own to the south of the Gū́rī Mīr, an unfinished brick structure built in the 1470s, with plain walls and no outer dome. The portal rises to 19 m and leads into a cruciform dome chamber with a dado of polychrome tile mosaics with gold. Some painting with gilding survives in the vaulting. A headless skeleton was excavated in the crypt. Later Timūrīds could have been buried in the ūsūlīs behind it.

The Khāna Aḥrār ensemble. South of the town, the outdoor tomb of the powerful leader of the Nakhshbandiya order Khāna ʿUbayd Allāh Aḥrār, known as Khāna Aḥrār [q. v. in Suppl.], who died in 896/1490, lies under a platform of grey and black marble which carries sixteen richly carved tombstones and is surrounded by a wall. A summer mosque looks over the square which lies to the west; on the north side stands the recently restored Nādir Dīwān Beg Madrasa (1630-5), with its mosque probably built earlier. The decoration on the entrance portal with tiger and gazelle in spandrels, and the pishtak in front of the domed miḥrāb chamber, vaguely echo Timūrid tile mosaics and calligraphic tiles.

The Namāz-gāh mosque stands in the north-western part of Samarkand and was built by Nādir Dīwān Beg around 1040/1630. A pishtak rises in front of a domed chamber between two groups of three blind arches. The baked brick surface shows no sign of surviving decoration.

Up to the building of the railway, there used to be on the left bank of the Zaraṣhān two large brick arches set at an angle to each other. One has since collapsed. They are said to have been part of a greater structure built under the Shībānīs to offset the current of the river during the spring high waters.

Although no gardens survive from the Timūrid
and which became the subject of numerous commentaries (see Hāджī Khālīfa, Kāṣf al-zunun, Istanbul 1951-3, i, 39). Unlike prior authors who had limited themselves exclusively to disputation in either theology or law under the rubric of ḍādāl, ḍādāl or munāzara [i.e.,] al-Samarkandi presented the first treatise applicable to any subject area—philosophy, law, and—thus the first attempt at a universal theory of disputation, referred to by his successors as simply the ʿaddāb al-baḥbḥ. The work is divided into three parts. The first gives definitions of technical terms such as munāzara, ḍādāl, amrān and ṣalāt, the second gives the procedure of debate (ʿaddāb al-baḥbḥ) who starts; what counts as a question; what objections are valid and when; how to determine the end of the debate (there is no judge), etc.; the final part gives examples of debates on questions (masāʾil) in theology, law, and philosophy. In his ʿṢahr al-mukaddima al-burḥānīya (i.e. of Burhān al-Dīn al-Nasafi, d. 687/1288 [s.]) (ms. Chester Beatty no 4396, at fol. 5b), which he completed according to I. Baghdadi in the year 690 (Hadīṣīy al-ṣīrin, Istanbul 1951-3, ii, 106), and in which he implies that he studied with al-Nasafi, al-Samarkandi mentions (at fol. 4a) that he treated the ʿaddāb al-baḥbḥ in his Muṣ'akātād (ʿArīf Ḥikmat no. 206, Medina), Kūshās al-ṣāfīr fī tabbākī al-arār and al-Anwār (probably his ʿṣahr on the Kūṣās).

Manuscripts are the best source of information on his biography; Hāджī Khālīfa slipped in stating that al-Samarkandi died around 600 A.H. (Kūṣās, i, 105). An important Istanbul manuscript apparently in the hand of his student (Laleli no. 2432, fol. 33b) states that he died 22 Shawwāl 702/9 June 1303. He wrote ʿṣahr on several of his own works, including the Kūṣās (completed in 683) and his own ʿṣahr thereon (completed in 692 according to Istanbul, Fatih no. 3960), a standard work on Aristotelian logic, which contains, inter alia, a solution to the liar paradox (see L. Miller, A brief history of the liar paradox in Islamic philosophy, in Of scholars, savants and their texts (London 1989, 173-82), and a detailed discussion of the ʿaddāb al-baḥbḥ. Both his al-Sāḥīfāt al-ilāhīyya (completed in 680 according to Laleli no. 2432, fol. 33b), ed. Abū ʿAbd al-Rahmān al-Ṣāḥīfī, Kuwait 1985, and his ʿṣahr thereon, al-Masāʾilī fī al-sāḥīfāt, were important theological works and are the most important in the field of Islamic theological disputation. In the dictionary of art, forthcoming, G.A. Pugačenkov, Ishrat-Khaneh and Ak-Saray. Two Timurid mausoleums in Samarkand, in Ars Orientalis, xxi (1968), 14 n. 19.

Other works include: ʿAyn al-nazar fī al-mantiqī fī ʿilm al-ḥadāl, a short treatment of the logic of juristic disputation concerned with, inter alia, implication (ṭalāzum), (Cairo, Dār al-Kutub no. 197) (manṭiq wa-ʿaddāb al-baḥbḥ); cf. Ṣuʿād, al-Maktabah al-Qaribiyah bi l-Ṭājmi l-Kabir, ms. v. Gāyī al-nazar, obviously a misprint.

Al-Ṭādākhira fī l-bay’a, a compendium on astronomy; Ajmal-i takhvim-i kasvātī-i Ḵāhīna (Leiden ms. no. 1196, 3 pers.), an astronomical chart for the year 1275-6; an anonymous commentary on Naṣīr al-Dīn al-Tūsī’s ʿṣahr on Tolemy’s Almagest is also attributed to al-Samarkandi (see Sezgin, vi, 94).

Al-R. al-islāmiyya (Princeton, Yahuda no. 2367), an interpretation of the ʿkhāhīdā, is probably identical with a manuscript of Berlin ms. no. 2458, Tabbākī kalimat al-ṭahālī ḍādāl according to Mach; cf. Bepān madkhab ahl al-sunnah wa al-baḥāb bi kalimat al-tawḥīd mentioned by Brockelmann.

Bibliography: Brockelmann, i, 468, S I, 840-1;

**SAMARRA**

a town on the east bank of the middle Tigris in Irak, 125 km north of Baghdad, of about 35 ha in 1924, and ca. 120 ha in the 1970s. Between 221/836 and 279/892 it was the capital of the *Abbásid* caliphate, and expanded to an occupied area of 57 km², one of the largest cities of ancient times, whose remains of collapsed pisé and brick walls are still largely visible.

The district was only lightly occupied in Antiquity. Apart from the Chalcolithic Samarran Culture excavated at the rich site of Tell al-Šuwwān, the city of *Sur-marrā*, refounded by Sennacherib in 690 BC, according to a stele in the Walters Art Gallery, Baltimore, may somewhat doubtfully be identified with a fortified site of Assyrian date at al-Ḥwawāyī opposite to modern Samarra. The ancient toponyms for *Samarrā* are Ḟ. Ṣawma (Polemy, V. c. 19; Zosimus, III, 30), Lat. *Sumere*, a fort mentioned in the retreat of the army of Julian the Apostate during the retreat of the army of Julian the Apostate.

The region experienced an upturn in its fortunes with the excavation of the Kāšū al-Kisrawī, the northern extension of the Nahrawān canal which drew water from the Tigris in the region of *Samarrā*,2 attributed by Yākūt (*Muṣjam*, s.v. *Kāšūl*) to the Sasanian king Khusraw Anūshirvān (A.D. 531-78). To commemorate this event, a commemorative tower (mod. Būrj al-Kālm) was built at the southern inlet (mod. Nahr al-Kālm) south of *Samarrā*,3 and a palace with a walled hunting park at the northern inlet (mod. Khādkdnī) north of the city. The new military canal, the Kāšūl Abī ʿl-Djund, excavated by the *Abbāsid* caliph Ḥārūn al-Raḥīd, was commemorated by a city in the form of a regular octagon (mod. Huṣn al-Kādisiyah), called *Muḥābārak* and abandoned unfinished in 180/796. The plan is based upon that of the Round City of Baghdad [q.v.].

*Probably* in 220/834-5, the caliph al-Muʿtasim [q.v.] left Baghdad in search of a new capital. The sources all report that the reason was conflict between the caliph’s regiment of Central Asian Turks and the population of Baghdad. The caliph apparently sought a residence for the court, and for a base for the *Abbāsid* army, outside of Baghdad, and was attracted by a region known for its hunting, but otherwise poor in natural resources.

The caliph’s city was formally called Surra Man Raʾa (“he who sees it is delighted”). According to Yākūt (*Muṣjam*, s.v. *Sāmarrā*), this original name was later shortened in popular usage to the present *Sāmarrā*. It seems more probable, however, that *Sāmarrā* is the Arabic version of the pre-Islamic toponym, and that Surra Man Raʾa, a verbal form of name, has been Aramaic which recalls earlier Akkadian and Sumerian practices, is a word-play invented at the caliph’s court.

Sura Man Raʾa was laid out in 221/836 on the east bank of the Tigris around the pre-Islamic settlement, with the principal palace on the site of a monastery to the north. This palace complex, called in the sources *Dār al-Ḳisrā*, *Dār al-Qalīfā*, *Dār al-Sulān*, and *Dār al-ʿĀmμ* ([see *AL-MAṣIRAH*] at al-Matīra, the city to the east, extending into the old hunting park. Two new palaces with hunting parks were built in 235/849 and 237/851, formed part of an extension of the city to the east, extending into the old hunting park. Two new palaces with hunting parks were built in the south, at al-Īṣṭablāt, identified as al-ʿArūs, and al-Muḥarrarahāt (not yet securely identified). A further palace, Balkuwara, excavated by Herzfeld in 1911, was built on the Tigris bank south of al-Maṣīra, surrounded by a military camp, but did not contain units of an army corps under al-Mutawakkil’s second son, al-Muʿazzz.

Three courses for horse-racing were built east of the
main city. Two have an out-and-back course 80 m wide and 10.42 km long with a spectators pavilion at the start, and the fourth a pattern of four circles 80 m wide and 10.42 km long with a spectators pavilion at the... 1936-1939, 2 vols., Baghdad 1940; A. Susa, Rayy Sdmarrd* fi cahd al-khildfa al-^Abbdsiyya, 2 vols., Baghdad 1948-9; 

The second avenue, Shdri*- Abi Ahmad, was the original avenue of the time of al-Mu’tasim, narrowed from 60 to 10 metres, and ended at the south gate of the caliphal palace, called Bb- al-Bustdn or Bb Aytdkh. Outside this gate stood the palace of al-Askar al-Mu... in 290/903, but found al-Djasawak a ruin. The two Shdri’l Imams ‘Ali al-Hâdí (d. 254/868) and al-Hasan al-A’askarî (d. 260/874) had a house on the Shdri* Abi Ahmad, probably adjacent to the mosque of al-Mu’tasim, and were buried there. The Twelfth Imâm disappeared nearby in a cleft commemorated by the Sardáb al-Mahdî in 260/874. The tomb was first developed in 333/944-5 by the Hdmdân Nâîr al-Dawla, and subsequently by the Bûyids. According to al-Shâykh Muhammad al-Samâwî, Wâhâbî al-sarrâ* fi shdn Samarra^, a verse composition of the 13th/19th century on the history of the shrine, the double shrine continued to be rebuilt frequently, notably in 445/1053-4 by Arslân al-Basâsîrî and in 606/1209-10 by the caliph al-Nâîr li-Dîn Allâh, whose work is commemorated by an inscription in the Sardâb. The present appearance of the shrine is to be attributed to work by the Persian Kâddar ruler Nâîr al-Dîn Shâh in 1285/1688-9 and other more recent work.

From the 4th/10th century onwards, Sammrra became a pilgrimage town. In the 6th/12th and 7th/13th centuries, the displacement to the east of the Tigris road from Baghdad to Mawâlî to the west bank of the river, and a consequent loss of trade, Sarrmrra was not apparently walled until 1834, when a wall was built out of ‘Abbâsîd bricks, as a result of a charitable donation.

In the 1950s a barrage was constructed on the Tigris, in order to divert the spring flood waters down Wâdî Tharthâr and to end the disastrous periodic flooding of Baghdâd. The lake formed behind the barrage drove the farming communities of the flood plain on to the steppe-land among the ‘Abbâsîd ruins, and enlarged the town, which remains the market centre of its district.

SAMARRA — AL-SAMAWAL B. ADIYÁ

AL-SAMAWAL (*A.* "the elevator of land")

1. Al-Samawa was the name given, in the definition of al-Bakri (*Muqādam mā stā'qdam*, Cairo 1364-71/1945-46), to a region in general inhabited by the Banū Kalb and the Banū Fazara (*q.v.*), a region in northwestern Arabia to the west of al-Kufa and the Euphrates and to the desert of Khusaf between al-Samawa and al-Kufa. Earlier geographers were more specific. Thus Ibn Hawkal (ed. Kramer, 22, 34-5, tr. Kramer-Wiet, 21, 34), see also his map of the Arabian peninsula) defines it as the plain stretching from Dāmât al-Qādir (of which he could not find any justification in the manuscripts) in northwestern Arabia to Abū Tammam’s *al-Tamr in the desert on the fringes of the middle Euphrates*. The first is a *fālāf poem* (*no. 1 in the Dīwān*), while the second was incorporated in his *Hamādiyā* (*no. 15*) and on which Șafi al-Dīn al-Hillī (8th/14th century) composed a *talqūn*. (ed. Beirut 1962, 36-41). The poem, however, is attributed with good reason to other poets than al-Samawa as well. A second poem (no. 2 of the *Dīwān*) found its way into the *al-Asma‘ī*’s poetic anthology (*al-Asma‘iyyāt*, no. 23) and parts of it are quoted in different other sources, among them Ibn Sallām al-Djumahī’s *Tabakāt*. The poem contains reflections on birth, death and the Day of Judgment which may be, as Hirschberg proposed, references to Aggadic literature, thus, contrary to poem no. 1, pointing to the Jewish religion of its poet. The authenticity of the poem was defended by Hirschberg against Noldeke’s negative verdict. Levi Della Vida drew up the very probable hypothesis that the poem was in fact created by one of al-Samawal’s descendants, who had already converted to Islam but still was acquainted with Jewish tradition.

Yet al-Samawa’s owes his fame less to his poetry than to a story, which gave rise to the saying “more loyal than al-Samawa”! The story is told in different versions. According to Ibn Sallam, the poet and King Da’i’ra imru’ al-Kays (*q.v.*) had entrusted his arms to al-Samawa. As the Ghashānī phylarch al-Hārith b. Djabala (*q.v.*) heard about that, he set out against al-Samawa, who entrenched himself in his fortress. Al-Hārith, however, took hold of al-Samawa’s son who happened to be outside the castle and threatened to kill him if al-Samawa would not deliver the deposited weapons. Yet al-Samawa preferred to witness his son to be killed by al-Hārith rather than to betray the trust committed to him. The story is referred to in a poem by al-Azghā (*q.v.*). In discussing this poem, Caskel concluded that the reference to Imru’ al-Kays in the story is a later invention. The poem no. 6 in al-Samawa’s *Dīwān*, where the poet refers to his loyal keeping of “the coats of mail of the Kindi”, is considered as spurious by Caskel.

In western scholarship, interest in al-Samawa concentrated on his Jewish religion, because one hoped that his poetry could throw some light on Jewish influence on early Islam. But since there is not a single poem of which al-Samawa’s authorship has never been questioned, discussion have focused mainly on the problem of authenticity. These discussions were stirred up anew when a hitherto unknown poem, which contains numerous references to biblical history, was discovered in the Geniza. It became clear, however, that its poet was not al-Samawa’s b. ʿAdiyyā. Following a hint in one manuscript, some scholars have started to think that its author was an otherwise unknown poet bearing also the name al-Samawa, who is said to have been a member of the Jewish tribe of Kūrasya (*q.v.*). Kowalaki attributed poem no. 7 in al-Samawa’s *Dīwān* of which he could convincingly show that it was the reply to a poem of Kays b. al-Khātim (*q.v.*) by an anonymous Jewish poet in the time of the prophet Muḥammad, to this al-Samawa b. al-Kurahī. Yet it still remains rather unlike-

---

AL-SAMAWAL b. ʿADĪYÁ, Jewish-Arab poet, who lived in the middle of the 6th century A.D. His residence was in the famous castle of al-ʾAbkal (cf. Vāyktū, s.v.) near Taymā‘. His genealogy is uncertain. Though mostly called al-Samawāl b. ʿAdīyā (or ʿAdīyā) al-Yahūdī, other genealogies such as al-Samawal b. Ḥarīd b. ʿAdīyā or al-Samawal b. Ḥiyāyā b. ʿAdīyā are also given. Some few poems attributed to a certain ʿSa‘ya (cf. Ṣezgin, *GAS*, ii, 250-1), who is said to have been al-Samawāl’s brother or, more probably, his grandson and to other members of his family are also handed down.

Even in the Middle Ages very few poems attributed to al-Samawal were known. His *Dīwān*, which was collected by Niẓāmah (*q.v.*), contains only nine poems comprising 88 verses. From these poems again only two gained greater fame because they had been included in widely-known poetic anthologies even before Niẓāmah’s comparatively late compilation of the *Dīwān*. The first is a *fālāf poem* (*no. 1 in the Dīwān*), while the second was incorporated in his *Hamādiyā* (*no. 15*) and on which Șafi al-Dīn al-Hillī (8th/14th century) composed a *talqūn*. (ed. Beirut 1962, 36-41). The poem, however, is attributed with good reason to other poets than al-Samawa as well.

A second poem (no. 2 of the *Dīwān*) found its way into the *al-Asma‘ī*’s poetic anthology (*al-Asma‘iyyāt*, no. 23) and parts of it are quoted in different other sources, among them Ibn Sallām al-Djumahī’s *Tabakāt*. The poem contains reflections on birth, death and the Day of Judgment which may be, as Hirschberg proposed, references to Aggadic literature, thus, contrary to poem no. 1, pointing to the Jewish religion of its poet. The authenticity of the poem was defended by Hirschberg against Noldeke’s negative verdict. Levi Della Vida drew up the very probable hypothesis that the poem was in fact created by one of al-Samawa’s descendants, who had already converted to Islam but still was acquainted with Jewish tradition.

Yet al-Samawa’s owes his fame less to his poetry than to a story, which gave rise to the saying “more loyal than al-Samawa”! The story is told in different versions. According to Ibn Sallām, the poet and King Da’i’ra imru’ al-Kays (*q.v.*) had entrusted his arms to al-Samawa. As the Ghashānī phylarch al-Hārith b. Djabala (*q.v.*) heard about that, he set out against al-Samawa, who entrenched himself in his fortress. Al-Hārith, however, took hold of al-Samawa’s son who happened to be outside the castle and threatened to kill him if al-Samawa would not deliver the deposited weapons. Yet al-Samawa preferred to witness his son to be killed by al-Hārith rather than to betray the trust committed to him. The story is referred to in a poem by al-Azghā (*q.v.*). In discussing this poem, Caskel concluded that the reference to Imru’ al-Kays in the story is a later invention. The poem no. 6 in al-Samawa’s *Dīwān*, where the poet refers to his loyal keeping of “the coats of mail of the Kindi”, is considered as spurious by Caskel.

In western scholarship, interest in al-Samawa concentrated on his Jewish religion, because one hoped that his poetry could throw some light on Jewish influence on early Islam. But since there is not a single poem of which al-Samawa’s authorship has never been questioned, discussion have focused mainly on the problem of authenticity. These discussions were stirred up anew when a hitherto unknown poem, which contains numerous references to biblical history, was discovered in the Geniza. It became clear, however, that its poet was not al-Samawa’s b. ʿAdīyā. Following a hint in one manuscript, some scholars have started to think that its author was an otherwise unknown poet bearing also the name al-Samawa, who is said to have been a member of the Jewish tribe of Kūrasya (*q.v.*). Kowalaki attributed poem no. 7 in al-Samawa’s *Dīwān* of which he could convincingly show that it was the reply to a poem of Kays b. al-Khātim (*q.v.*) by an anonymous Jewish poet in the time of the prophet Muḥammad, to this al-Samawa b. al-Kurahī. Yet it still remains rather unlike-
ly that such a poet really existed. Whatever the case may be, al-Samawal's poems, though only partly or even not at all genuine in the narrow sense of the word, are still of interest to the history of Judaism in early Islamic Spain.

(SAMBAS, a town and river in the Province of Kalimantan Barat (West Kalimantan) in the Republic of Indonesia, lying just south of Sarawak at lat. 1° 20' N. and long. 109° 15' E. It is one of a number of Malay/Muslim-dominated estuarine settlements on the Borneo coast whose existence was based on trading relationships with non-Muslim native peoples in the interior and Chinese traders and miners. Local versions of the Islamisation of Borneo's West coast attribute the coming of Islam to Arabs from Palembang who were trading in the area from the mid-16th century.

At this time, Sambas was a tributary of the Peninsular Malay kingdom of Johor, but through a royal marriage in the 17th century came under the authority of Sukadana, another Bornean coastal settlement to the south. Descendants of Sultan Mufaham Sâdi al-Din, the first Muslim ruler of Sukadana, assumed power in Sambas and may have helped to spread Islam in the kingdom. Sambas was not as influential as its more powerful neighbours, Landak, Pontianak and Membrum, and was prey to local wars and a haven for pirates. To bolster his authority, the Sultan of Sambas sent a mission to Batavia in 1818 requesting Dutch assistance, as a result of which the first Dutch Resident was installed. During the early 19th century there was an international dimension to local politics as the Dutch sought to extend their influence north of Sambas into Sarawak [q. v.].

This period offered opportunities for Sambas to become closely linked with the Sultan's court. There was an Imam and four Kháis, although after 1831 there were two Imams, Imám Tua and Imám Muda (Senior and Junior), probably an example of a dual appointment to resolve a local conflict. Later in the century, Káití Djaíbr studied in Mecca with Sháykh Ahmad b. Muhammad Zawí (1856-1906) of Patani [q. v.], and later returned to Sambas to become Mahárahá Imam.

The Imams of Sambas were in touch with events in the wider sphere, and in 1930 Sháykh Muhammad Bagháni Ímrán wrote to the editor of the Cairo reformist journal al-Manár [q. v.], to ask why Muslims were not as advanced as people in Europe, America and Japan.

Sambas shared in the reorganisation of Islam in Borneo carried out by the Netherlands East Indies government in 1937. This established kádí Courts and kádí Appeal Courts on the same lines as for Java and Madura. After 1945, in the independent Republic of Indonesia, the administration of Islam has been through the Mahkamah Shar'iah, under the Ministry of Religious Affairs.

(SAMGH, samagh (a. pl. samágh) indicates gum resins, the desiccated latexes of several plants and the mixtures of natural resins (rútnád) with gum-like substances.

To the best-known gum resins belong: ammoniac (wugsháhak), the product of the ammoniac gum tree; the so-called devil's dirt (hilií), the latex of the asafoetida (enggulían) which, when exposed to the air, hardens into a dirty-yellow gum resin: wolf's milk (pátti), in several varieties of the class Euphorbia, with many sub-varieties; galbanum (šiina), the desiccated latex of Ferula galbaniflóra, used as spice and medicine; myrrh (mur), from the bark of several varieties of thorny shrubs of Commiphora abyssinica; the often-described frankincense (kundur [see LUBÁN]) from various Boswellia varieties, indigenous in South Arabia and Somalia; sagapenum (sabkinád), the yellow, translucent resin from Ferula Songorí which can cause irritation of the skin and whose smell resembles that of asafoetida; and camphor (káfur), the white, transparent mass of the camphor tree Cinnamomom camphora [see KÁFÚR], indigenous in East Asia. Most of the gum resins (28 in number) are enumerated and described by al-Nuwayri, Nihiá, xi, 291-324; Umar b. Ali al-Ghasáni, Mu'amád, ed. al-Sacká, Beirut 1975, 287-92, has 20 gum resins; al-Bilání, Sháhání, has 13 varieties (see the index of the Russian tr. by Karimov, Tashkent 1973); Ibn al-Bayátr, Djamí, iii, 85, 25 - 87, 13 (= Leclerc, nos. 1407-16) has 9 varieties; other authors have less.

The word samgh is usually used alone for samgh 'arábí, gum arabic, so called because it was exported from Arab ports and spread by the Arabs. It is the viscous secretion gained from the bark of several varieties of the class Euphorbia, with many sub-varieties; galbanum (šiina), the desiccated latex of Ferula galbaniflóra, used as spice and medicine; myrrh (mur), from the bark of several varieties of thorny shrubs of Commiphora abyssinica; the often-described frankincense (kundur [see LUBÁN]) from various Boswellia varieties, indigenous in South Arabia and Somalia; sagapenum (sabkinád), the yellow, translucent resin from Ferula Songorí which can cause irritation of the skin and whose smell resembles that of asafoetida; and camphor (káfur), the white, transparent mass of the camphor tree Cinnamomom camphora [see KÁFÚR], indigenous in East Asia. Most of the gum resins (28 in number) are enumerated and described by al-Nuwayri, Nihiá, xi, 291-324; Umar b. Ali al-Ghasáni, Mu'amád, ed. al-Sacká, Beirut 1975, 287-92, has 20 gum resins; al-Bilání, Sháhání, has 13 varieties (see the index of the Russian tr. by Karimov, Tashkent 1973); Ibn al-Bayátr, Djamí, iii, 85, 25 - 87, 13 (= Leclerc, nos. 1407-16) has 9 varieties; other authors have less.

The word samgh is usually used alone for samgh 'arábí, gum arabic, so called because it was exported from Arab ports and spread by the Arabs. It is the viscous secretion gained from the bark of the acacia tree (al-karas, in Morocco al-sába), which represents several varieties of the acacia imported from Africa: Acacia senegalesis, from the steppe zones of West- and Central Africa to the right and left of Senegal, Acacia abyssinica and Acacia nilotica, from Africa and India, and many others.

In medicine, gum arabic is used as a palliative and
as an astringent for drying up putrescent ulcers. It helps the formation of new flesh in ulcers and stems the blood which flows from wounds; it also serves as cough medicine and for the preparation of collyria. The drug consists of roundish, colourless or yellowish pieces, up to a diameter of three cm, which fall easily into small pieces which shine like glass.

(A. Dierich)

**AL-SAMHūDI,** Nūr al-Dīn 'Abū l-Haṣān Šāli b. 'Affāl al-Dīn 'Abd Allāh al-Shāḥī, noted Egyptian scholar in history, theology, law, tradition, etc. (844-91/1449-1506).

He was born in Samhūd in Upper Egypt in Safar 844/July 1440, the son of a kādī; in his genealogy, he claimed to be a Hasanid sayyid. His biography is given in detail by al-Sakhātī, resumed in Ibn al-Mukhtar Dīr al-Mustafī, completed in 199/814 (see Hadjdī Khalīfā, i, 190 no. 228, ii, 44 no. 2302; Sezgin, GAS, i, 343-4; this book was known to al-Sakhātī but has since disappeared.

**Biography** (in addition to references given in the article): 1. Sources. Sakhātī, Darvī, vii, 245-8; Ibn al-'Imād, Shuhdārat, viii, 50-1; 'Abd al-Kādir al-'Aydarūsī, al-Nīr al-sufīr, Baghdād 1353/1934-5, 56-60; Shawkānī, al-Badr al-šālit, Cairo 1348/1929-30, i, 427; Hadjdī Khalīfā, see index at vii, 1190 (no. 7097).

**SĀMĪ, ŞEHM-UL-DĪN FRAHĒRĪ** (Mod. Turkish, Şemseddin Şami Frasari), Ottoman Turkish author and lexicographer. He was born at Frähger in Albania on 1 June 1850, of an old Muslim family whose ancestors had been granted this place as a fief by Sultan Mehmed II, and was educated in the Greek lycée at Yanina, at the same time receiving private instruction in Turkish, Persian and Arabic. He came to Istanbul in 1871 in order to take up journalism, and in 1874 was sent to Tripoli (North Africa) as the editor of Wilâyet newspaper. He returned to Istanbul 9 months later and founded the daily newspaper Şabāb in 1876. It was during these years also that he embarked on literary production, attacking himself to the new school of îbrahim Şināwī and Nāmil Kirmāl, and producing a pioneer Turkish novel, Ta'ṣhaḵdī-i Taṣfāt we Fitnāt, which anticipated the language reform of the 20th century and the "Ottoman language" but the "Turkish language", and that the over-abundant Arabic and Persian words and phrases should be replaced by old Turkish ones which had fallen into disuse; he thus anticipated the language reform of the 20th century Turkish Republic.

Later, he became the editor of Tergüşmān-ı Şarḵ newspaper and the journals Şâile and Hafsa. Meanwhile, he wrote a series of pamphlets for the Deyh Kütüphāne series. In 1881 he was appointed as the secretary for the Tefīsh-ı Askert Komisyonu, or Army Inspection Commission, but, at the same time, began to publish his famous lexicographical works: Kınāsī i-farsī (French-Turkish, 1882, and Turkish-French, 1885), the six-volume encyclopedia Kınāsī oğlum, and the Kınāsī türk in two parts. In 1893 he was put under house arrest by ʿAbd ʾul-Hamīd II. He stayed in his home at Erenkōy, Istanbul, and devoted the rest of his life to his works, from 1899 onwards being forbidden to receive guests; he died on 18 June 1904 in Istanbul.
Sami’s greatest merit lies in the fields of lexicography and philology. As well as working on Turkish and Arabic, he also worked on producing an Albanian grammar, poems in this language and a book on the future of Albania. With his brother Na’im Frasher (1846-1900; see on him, F. Babinger, in İsl., xi [1921], 99), he was among the leaders of the group which produced a Latin-based alphabet for Albanian in the 1880s. His best-known work is his Turkish dictionary, the Kâmûs-i Türkî. In this work, the order of the words is alphabetical and the arrangement of the different meanings of the words is very clear. Samî represented a compromise between the different views prevailing in his time on the development of Turkish, and, despite his own far-reaching Turkish purism, his dictionary is a reflection of the educated Turkish of his time. Among his unpublished materials are an unfinished Arabic dictionary, comprehensive studies on the Kutadgu bilig and the Qırğız inscriptions, as well as works on Persian and Eastern Turki.

Bibliography: 1. Selected works. (a) Novel: Ta’sîrhâ-yi Ta’dif ve Fûnet, 1872. (b) Plays: Besa, yahud Şah-i wefa, 1875; Sîlî Yahya, 1875; Kâwe, 1876. (c) Dictionaries: Kâmûs-i Fransawi (French-Turkish) 1882; Kâmûs-i Fransawi (Turkish-French) 1885; Kâmûs al-dâ’âm, 1888-98; Kâmûs-i Türkî, 2 vols., 1899-1900. (d) Translations from the French: Târîh-i mümâd-i Fransa, 1927; Îkâmîyar, 1873; Câlatên, 1873; Şâyânî ya’âlûkarînî, 1878; Şyvîlî, 1879; Robinson, 1884. (e) Pamphlets: Medînîyet-i islâmîye, 1878; Eşârû, 1878; Kudîlân, 1878; Gök, 1878; Yer, 1878; Însân, 1878; Etmâlâ, 1878; Lâdîrî, 1882; Yenî însân, 1885; Lîsîn, 1885; Uyûl-i tinkid ve teṭêbî, 1885.

was never any distinction between Rabbi = teacher and Kohen = priest. These last lived under a ... to the field of impurity. Pietro della Valle observed the low wall inside which women remained at the time of their menstrual periods until they became ritually pure again. Comparison with the rules of the Falasha is interesting. The Kišāb al-Kaṭif, the most extensive of their legal compendiums composed in Arabic in A.D. 1290, states (S. Noja, Il Kišāb al-Kaṭif dei Samaritani, Naples 1970, 84): "When any of our community touches his hand to ablution while he is still not of our religion and then sits down to food, he must rinse his hand, since anyone touching something with his hand after ablution invalidates that ablution". From this arose the Samaritans' revulsion from physical contact with those not of their community (cf. the Kūrānīc là miśād) and, consequently, the ductus n-z-r (nizār) concerning which Silvestre de Sacy noted: "suspecte d'infected (je lis nāzar et je prend ce mot dans le sens de phthicon, etc. defectus, color vitium)". Another non-Samaritan piece of evidence from the 7th century mentions their current custom at that time of burning by fire any of their land over which a non-Samaritan had passed. This piece of evidence ends with the words: tanta illis est execratio utrisque. Al-Shahrastānī was well aware of this when he noted: "suspecte d'infection (je lis ndzir) et d'invalidation (je lis invalidatione)". Nevertheless, much prudence is required in seeing, as has been done in the past, an imitation of Samaritan customs in many of the Islamic rules such as the positions in worship and the ritual formulae, since it may well be that the contrary is true: it was the Samaritans, with their great capacity for adaptation, who were inspired by the living practice of Islam.

2. Samaritan literature in Arabic.

When the Samaritans experienced the Islamic invasion, their language was Aramaic or, rather, one of the numerous forms of Aramaic with its own special characteristics. Above all, in phonology, their language was close to Palestinian Aramaic, with the disappearance of the laryngeals, a marked preference for prothetic vowels, etc., whilst retaining some differences, such as the change a > a in closed, unstressed syaleds. Their writing system was—and still is today—palaeo-Hebraic, i.e. the ancient system of writing similar to Phoenician, which had been used all through Israel before the Babylonian Exile. On their return, the Jews, in order to distinguish themselves from the Samaritans, adopted the "square Hebrew", which has since then been permanently used by them all, including the Karaites; today, it is the writing system used in the State of Israel. After the time of the Arab conquest, the Samaritans began to speak Arabic without any break at all. In an unsystematic fashion, for writing down Arabic, they began to use the palaeo-Hebraic script equally with the Arabic script. A similar state of affairs is represented by the use of Kārghūn [g.v.] for writing Syriac.

The works written in Arabic (in the Narbonne Chroni
cle, there is quoted the first Samaritan who began to speak in Arabic), independent of writing system, cover all the aspects of their interests.

1. Translated works.

Translation of the Pentateuch. Several versions are involved. Five can be identified, given the fact that we still do not have a complete critical edition. The Samaritans were interested above all in commentaries, and one can discern that they utilised verses of already-existing commentaries from Judaism and also—at a late date—from Arabic-speaking Christianity, naturally with adaptations.

Translations of various works. No work in this category can be considered as important.

2. Original works. Any critical edition. (a) Chronicles. At least seven of these exist. Some are short; others, like that of Abu 'l-Fath, very lengthy. The Asaṣīr ("stories"), very close to the Midraṣ. The Shaḥḵaša, the "chain" of the high priests. The Tūlīda, the "genealogy", also called "the Neubauer chronicle", from its editor.

The Book of Joshua. This book, completely in Arabic, has no connection with the relevant first historical book of the Old Testament. It is based on several sources, and was transcribed into Arabic by an anonymous author ca. A.D. 1300. The "Adler-Seligsohn" chronicle, after the names of its editors.

The "Chronicle II" or "Macdonald-Cohen" one, after the names of its editors. Here it is the Arabic text which is the original, and not the Hebrew.

The K. al-Taẖkākh, the Annals of Abu 'l-Fath, the longest and most complete. Dating from the 14th century, it has been brought up to the middle of the 19th century.

(b) Commentaries on the Pentateuch. These books, like the treatises on law, are considered by the Samaritans as their most important books, and were written originally in Arabic.

Various partial commentaries: The K. fi ṣūrūḥ al-ṣaḥāb kāmilāt" Commentary on the Decalogue" by Abu 'l-Ḥasan of Tyre. The al-Khūṭa b al-dīnār or Sharḥ azīnu, on Deut. xxixi by the same author.

Commentary on Genesis (from 1:2 to 5:1) by Sadaka b. Munadjaḏa b. Sadaka, called al-Hākim. The Sharḥ al-Fāṭiha, on the "Fāṭiha", i.e. on Deut. xxxii. 3-4, by Ibrāhīm al-Kabbāši, etc.

The most extensive and most popular is the commentary on the first four books of the Pentateuch written by Muslim b. Murdjan b. Ibrāhīm and his nephew Ibrāhīm b. Yaḥyā b. Murdjan in the last century.

(c) Legal treatises. These were also written in Arabic after the decline in the use of Aramaic. They include amongst others:

The K. al-Kaṭif "The Sufficient", from A.D. 1042, by Yūsuf b. Salāma of 'Askar, on "that which is sufficient for living according to the law of God"; in effect, a work of fāhah.

K. Masā'il al-khaṭṭāf "Book on questions of conflicting views", from A.D. 1106, by Munadjaḏa b. Sadaka on the points of disagreement between the Samaritans, the Jews and the Karaites.

K. al-Tihāb "Book of the commandments", of A.D. 1030, by Abu 'l-Hasan of Tyre, involving polemics with the Jews.

K. al-Maṭritāy "Book on inheritances", of A.D. 1170, by Abū Isḥāq Ibrāhīm, a physician at the court of Sulāḥ al-Dīn (Saladin), dealing with everything regarding successions.

K. al-Farādāḏ "Book on the division of inheritances", from the 14th century A.D. by Abu 'l-Faradāḏ al-Kathāžaḥ.

K. al-Gharā "Book on nudity", by al-Mu'allim
Barakat, on the basis of the teachings and fatwàs of Abu Ishák Ibrahim.

(d) Collections of fatwàs for fixing the calendar:

K. Hillel, in "Book of the calculating of the years", of A.D. 160, by Elazar 'Abd al-Mu'in b. Sadaka, which includes the information of previous astronomical works in order to determine the calendar for the year.

(e) Works on grammar.

K. al-Taũsì'a, "The initiation", the first Samaritan Hebrew grammar, by Abu Ishák Ibrahim.

With the arrival in massore of Europe in the Samaritan community in the 19th century and the development of a market for manuscripts, certain of these works, originally in Arabic, were translated and recopied into Hebrew in order to satisfy book-collectors and purchasers who did not know Arabic; the case of the work Hillûk is well-known. Translations have sometimes been taken for the originals by European scholars, naive and excited, and encouraged by information from malevolent and uncritical sources.

Today, still, Arabic is the sole spoken language, but one notes a certain revival of Hebrew, to the detriment of Aramaic, which remains truly a dead language.

AL-SAMIRI "the Samaritan", is the name in Kùrûn, XX, 85, 87 and 95 of the man who tempted the Israelites to the sin of the Golden Calf. The sin itself is mentioned twice in the Kùrûn. In the first narrative, VII, 487-50, the story is told of the sin of Israel and Aaron as in Exodus, xxxii, with but the elaboration that the calf cast out of metal was "lowing" (khuwdr). The second version, XX, 83-96, preserves the claim of Aaron in the terminology of Israel in the same situation. At al-Samiri’s bidding, the Israelites cast their ornaments into the fire and he made out of them the lowing calf which was worshiped by the people although Aaron advised them not to do so. When challenged by Moses, al-Samiri justified himself by saying that he saw what the others did not see, the footsteps of the messenger (understood in Muslim tradition to be the tracks of the hooves of Gabriel’s horse). Moses then announced his punishment to him: "So long as you live, you shall call out, 'Do not touch me' (kà mìsà’î)" (XX, 97).

The Muslim tradition has had no doubt that al-Samiri was a Samaritan as known within the Jewish and Christian traditions. Al-Tabari, Qûmî’s al-hayàn, Cairo 1905, xvi, 152, and al-Zamakhshari, al-Kahfû, Beirut 1967, ii, 549, for example, understood al-Samiri to have been a prominent Israelite of the tribe of Sàrim whose name was Mùsâ b. Zafar; his religion is understood to have differed from that of other Jews.

Scholars have extensively debated the question of how a Samaritan became involved with the Mosaic story of the golden calf. Bernard Heller in El and SEI agreed with Goldzihier (in his article Là Misàsa) that al-Samiri was a representative of the Samaritans, a group which kept apart from non-Samaritans because of a special dispensation. In a segregation of this kind—as in the Jewish laws regarding eating (Kùrûn, IV, 160)—Muhammad saw a divine punishment. What did al-Samiri (= the Samaritans) have to atone for, such that he would be punished in this manner? For the sin of the golden calf. What was known as a ritual practice of the Samaritans—that contact with those outside their group created impurity—is put back into earlier times and explained as a punishment of al-Samiri for having incited the Israelites to make and worship the calf. But other theories have been put forth. Speyer suggested a reference to the story of Zimrí (and thus al-Samiri) ben Sàlû from Num. xxv, 14, who was guilty of defying Moses in having relations with a Moabite woman. More recently, Schwartzbaum, developing a suggestion of Yehuda, has suggested that we have a tale in which the story of King Jeroboam’s calves (one of which, according to a Talmudic tradition, was able to talk, thus being parallel to the Kûrûnic idea of the golden calf "lowing") has merged with that of Moses and the golden calf. The conflation stemmed from Jeroboam’s statement "Here are your gods, Israel, that brought you up from Egypt" (I Kings, xii, 28) in reference to his two golden calves, a statement which also appears in Elijah and Elisha, in the punishment of Aaron. Proposing the link to al-Samiri is the point that Jeroboam’s capital was in Shechem (I Kings, xii, 25), the Samaritan sacred centre. Schwartzbaum also sees remnants of the folkloric motif of the Wandering Jew in the story of al-Samiri who roams the world crying, "Do not touch me!" Regardless of how the story came about, the Kùrûn appears to present the earliest record of this midrashic development; aspects of it are found in Jewish sources (e.g. in Porîkî dr Rabî Eler tên Tanûhà) would seem to date from after the rise of Islam.

(B. Heller-[A. Rippin])

AL-SAMIT, "the Silent One", as opposed to al-
natik "the Speaking One", a term used by several extremist Shi'i sectarians (ghuldt) to designate a messenger of God who does not reveal a new Law (qur'ar). The pair of terms is found in the notices concerning the rise of the more powerful Arghuns, who had been displaced from Kandahar in Afghanistan by Babur [q.v.].

The term natik means that he is the master of the Inner Meaning (sadih al-batin) who does not pronounce an outward revelation (lā yanyukhu bi-qur'artan zahir). In later Ismā'iī writings, the term sāmit falls into disuse.

The presence of Sindhi elements in their names also indicates their indigenous origin. There is little evidence about their conversion to Islam. The first Samma chief is generally mentioned as Djam Firuz Unnar, who came to power in the early 1350s at Thata. It is uncertain whether he was the same person who figures in Ibn Battūta’s account as Wunar al-Sāmirī, a high official at Siwistān under Sultan Muhammad b. Tughlūk of Dīhī, who later rebelled and rose to chieftaincy as Malik Fīrūz (iii, 105-7, tr. Gibb, iii, 599-600). Most Sindhi scholars are inclined to identify Ibn Battūta’s “Wunar al-Sāmirī” with the Samma chief who became the first of the Samma dynasty that ruled over Sind, with their capital at Thatta.

The chronology of the Samma rulers as given in the Ta’rikḥ-i Sind of Mir Maṣʿūm Bakhkāri and in later chronicles which have followed him has been proved to be seriously at fault, as shown conclusively by Riazūl Islam, The rise of the Sammas in Sind (see Bibl.), 1-24. The “tentative list” of the Samma rulers and their chronology worked out by N.A. Baloch “is comparatively more authentic”, see his article, in Bibl. 103-36.

It was during the joint reign of ‘Alī al-Dīn Dīnān and Sadr al-Dīn Bānbhāna that Tughlūkī Dīhī Sultan Fīrūz Shāh led a long campaign against Thatta which began in the last months of 1365 and ended in 1367 with the intercession of the leading Suhrawardī saint of Sind, Sayyid Husayn Djalal al-Dīn, called Maḥdīm-i Dāhānīyān [see Maḥdīm-i Dīn ... al-Baḥrānī] for details, see Riazūl Islam, op. cit.). The two joint rulers made their submission to the sultan, and joined his return march to Dīhī. The sultan assigned the rule of Sind jointly to Djam ‘Alī al-Dīn’s son and to Tamācī, son of Bānbhāna. Later, when Tamācī showed signs of dissatisfaction, he sent Djam ‘Alī al-Dīn to take charge of the affairs at Thatta. Upon Djam’s death, the power rapidly disintegrated after Fīrūz Shāh’s death in 791/1388, the Sammas assumed complete independence.

The Samma chief was a ruler who provided Sind with a century and a half of prosperous and fairly peaceful dynastic rule. Their popularity is well reflected in folk tales and songs pertaining to the various rulers. The best ruler of the dynasty undoubtedly was Djam Nizām al-Dīn (II) Nindā (866-914/1461-1508); his tomb is the most prominent monument at Maḍī (near Thatta), the necropolis of mediæval Sind (see Mir ‘Ali Shīr Kānī, Maḥdīm-i Nindā, ed. Rāghīdī, especially his Note at 88-103). The Djam was a great patron of art and culture, and enjoyed wide popularity at home and high prestige among the neighbouring kingdoms. The famous scholar Djalal al-Dīn Dāwānī (d. 908/1502-3 [q. v.]) wanted to migrate from Shīrāz to settle in Sind under the patronage of the great Djam, but died before he could set out. However, two of his prominent disciples settled permanently at Thatta (Mir Maṣʿūm, Ta’rikḥ-i Sind, 74).

Samma rule came to end with the arrival in Sind of the more powerful Aqhzān, who had been displaced from Kandahār in Afghanistan by Bābur [q.v.].
their leader Shah Beg Arghun founded his own dynasty there after his victory over Firuz b. Ninda in 926/1520 [see ARGHUN]. A branch of the Samma tribe, known as the Jujadedja Sammas, ruled over Samman from around 926/1520 to the French and whose Islamic orientation arose more from the conjuncture of events than from a predetermined plan.

From al-Asma I is reported the saying, "Whoever grazes his herds during winter in al-Dahna", in spring in al-Samman, and in late spring in al-Him, has completed his herds or pasturing them [on the herbage that shoots up in the wake of rain]." Yakut writes that in ancient times these pastures were the tribal land of the Banu Hanza. Al-Samala and al-Sub are mentioned by classical poets like al-Farazdaq, Dafir, and especially Dhu 'l-Rumma, who also names many of their watering-places.

**SAMMUR [see FANAK; FARW].**

**SAMMUR (A.).** butter, made from cows', goats' and ewes' milk, heated over the fire to extract its impurities, and hence called clarified butter (as distinct from sult which is butter made from churned milk). Mediaeval dietetic texts state a preference for clarified butter made from cows' milk over goats' milk. Its medicinal benefits were as an antidote against poisons and snake bites, if ingested alone or mixed with honey, and as an ointment for the cure of boils and abscesses, including haemorrhoids. Samm was also used in the kitchen and, according to the *Mukhtasarfi 'l-tibb*, the use of this in the urban milieu reflected by the culinary manuals was almost exclusively limited to the preparation of egg dishes, such as omelettes, and sweet dishes made with flour; in the latter case, *samn* was often mixed with sesame oil (ghirad).

**SAMORI TURE (1830-1900), the founder of an empire in West Africa during the 19th century. A bloody tyrant and slave-merchant in colonial historiography, and a precursor of resistance for African nationalism, Samori never ranked as an emblematic figure for Islam in the sub-Saharan region. We now discern in him the figure of an imperial leader, with undoubtedly political and military qualities, whose resistance to the French and whose Islamic orientation arose more from the conjuncture of events than from a predetermined plan.**
Samori arose from the Mandinka/Mandigo world, which had in particular given birth to the mediaeval Islamic kingdom of the Dioura (Dioula) Muslims and traders, at that time stirred up by the indirect effects of the largely Fulani djihadis taking place in adjoining regions (1727, Futa Djalon, in modern Guinea; 1817, Masina, in modern Mali; 1852, al-Hadiji 'Umar, in the northern part of Guinea). Samori's beginnings were those of the leader of a Mandingo band of troops. He first exercised his calling of arms, before 1860, in the service of various clans, notably that of his maternal relatives, the Kamara. In 1878, he personally took control of all Upper Niger, and in 1881 seized Kankan, the main Islamic city of the region.

The capture of Kankan brought into his circle numerous scholars. From now onwards, Samori was assisted by a secretary who wrote his correspondence in Arabic, but, above all, he installed in his immediate entourage, for eight years, Sidiki Sherif Haidara, a shari' of Kankan and shaykh of the Kadiiriyya, who became his master. At a time when he was still, at the age of 20, illiterate, Samori acquired in his shadow a taste for Arabic and for Kur'anic recitation.

The people of Kankan were thus the agents of a grafted process of Islam. In 1884, at the end of Ramadân, he who was not yet anything more than a kättegi (war chief), and then a faama (political chief by right of conquest), assumed the title of aləmami (al-imam), borrowed from the neighbouring Fulani djihadis. In correspondence, he was after this time described as amir al-mu'minin. In December 1886, at the end of a period of study, he proclaimed himself namu'tigi ("master of tradition"), a dignity reserved for scholars of hadith and fiqh, and led in person the Friday prayer. He also launched a forcible movement of Islamisation, imposing the shari'ah and the Islamic law of succession, nominating kadi and making Kur'anic teaching general by means of a network of paid schoolmasters (karamaks), forcing non-Muslims to convert. On this occasion he plunged into open conflict with the Mandingo traditional rulers, whom he denounced on the direct hostility of part of his family and his partisans. The excesses of this Islamic revolution, combined with defeats suffered at the hands of his main enemy in the region, the Senufo kingdom of Kenedugu (Sikasso), forced Samori to relax the system. This episode, which had hardly lasted four years, came to an end in 1889. There nevertheless remained of these attempts a strong Islamising tendency at the head of the empire, which at this time enjoyed its apogee with a population of about a million inhabitants and an area of not less than 200,000 km².

The threat from the French played an important role in this return to a more pragmatical attitude. The first clashes with the French, who were now reaching the river Niger (Bamako, 1 February 1883) and who marked out Samori as the enemy who was to be brought low. The history of relations between the French and the Mandingo Speaks is one of a long series of treaties swiftly renounced (Kenya-Kura, 1886; Bisandugu, 1887; Nyako, 1889) and of frontal attacks which had various outcomes. Samori was forced to evacuate Upper Niger and to transfer his troops and faithful supporters further eastwards, to the north of the Ivory Coast, into lands populated by indifferent or hostile tribes. For several years, Samori's power reached a new peak. But, deprived of access to the ports of Freetown and Monrovia, which had allowed him to import rapid-firing arms, Samori was then forced to rely on the defensive. He was abandoned by the Jula of the "black legend" in French historiography, to the detriment of social aspects (notably, the extension of slavery as a result of the incessant warfare)—and a certain fascination for the author of the "genius" (a recurring term) of his hero—by Y. Person, Samori. Une révolution Dyula, 3 vols., Dakar 1968-75, pp. 2,377; Cartes historiques de l'Afrique (fin du 19e siècle). Samori. Une révolution Dyula, Paris, Centre de Recherches Africaines 1940, 44 maps. See also Person, Samori, construction et chute d'un empire, in Ch.-A. Julien et aîis (eds.), Les Africains, Paris 1977, i, 249-85 (résumé of the thesis), and Samori et Islam, in J. R. Willis (ed.), Studies in West African Islamic History, i, The cultivators of Islam. Studies in community, church and state, 1897, 259-77.

Person has clearly shown the crushing weight of the "black legend" in French historiography, polemical and repetitive. Three works are worth mentioning: Commandant Peroz, Au Soudan Français, Paris 1889; Capitaine L.-G. Binger, Du Niger au Golfe de Guinée, Paris 1892, 2 vols.; Colonel Gallieni, Deux campagnes au Soudan Français, Paris 1891, which contains in particular the greater part of Peroz's report on his mission to Bisandugu, Samori's capital, in 1886. These three officers were direct participants in the events, and the first two had a long period of contact with Samori. (J.-L. TRIAUD)

Samos [see Sisam]. Samru or Sumru, Bégam, the originally Muslim Indian wife of the European adventurer Walter Reinhardt Sombre or Samru, who held the pargana [q. v.] of Sardhana [q. v.] in northwestern India under the Mughal Emperor Shâh 'Alâ' II [q. v.]. On Reinhardt's death in 1778, Bégam Samru kept up what was virtually a petty principality of Sardhana, with an army which included some 300 European and half-breed mercenaries, and in 1792 married a French soldier of fortune Levassault. Toppled from control of Sardhana in 1793 by a son of

Bibliography: The bibl of the Samorian movement is dominated by the monumental thesis of Yves Person, based on an extensive combing of the archives and far-reaching oral enquiries (861 informants, from 1955 to 1962). Without being basically challenged, Person's work may be criticised on certain points: the very concept of a "Jula revolution", which makes Samori the political expression of the trading minority, thereby underestimating in his approach the truly Mandingo warrior models—the essentially political vision of Samori's undertaking (erection of a sovereign power, defence of an identity), to the detriment of social aspects (notably, the extension of slavery as a result of the incessant warfare) —and a certain fascination for the author of the "genius" (a recurring term) of his hero.
Reinhardt's, Zafar-yab Khan, in whose putsch Levassault died by his own hand, the Begam was nevertheless restored by the Irish adventurer George Thomas. After the British conquest of the Do'âb [q. v.] in 1803, she tendered her loyalty to the British, who allowed her to retain her estates and to keep up a reduced army.

In 1781 she had been baptised a Roman Catholic, and at Sarthana she built churches and schools, including a cathedral for a bishop appointed to the new see, and she also contributed to Hindu and Muslim charities; her foundation is still today an important centre for Christian activity in the Do'âb. However, she was herself proficient in Persian and Urdu, and had a lively circle of poets in these two languages at her court, which included François Gottlieb Koiné (var. Cohen) "Farasu", nephew by marriage of Zafar-yab Khan, who skillfully expressed himself in Hindi poetry and described by Sprenger as "the one outstanding name in the annals of Anglo-Indian [Urdu] poetry". Her new palace in Sarthana later became a Roman Catholic school; her Dilli palace in the "Oriental Regency" style was used as a powder factory by the insurgents during the Sepoy Mutiny of 1857-8. After the death of this remarkable woman on 27 January 1836, her estates were resumed, but her large private fortune passed to the son of the marriage between Zafar-yab's daughter and the Begam's Eurasian factor Dyce, David Ochterlony Dyce-Sombre, and on his death in London in 1851, her fortune mainly passed, after prolonged litigation, to her wife, daughter of Earl St. Vincent, and subsequently Lady Forrester.

(C.E. Bosworth)

**ŠAMSAM AL-DAWLA SHÂHNAWÂZ** [see MA'ÂTHIR AL-UMARA Q. V.]

**ŠAMSAM AL-SALTANA**, Nadji Kuli Khan, a Bakhtyâri, was born about 1846. His father was Husayn Kuli Khan, more commonly known as Il-khâni, the first Bakhtyâri leader to be formally designated Il-khan of all the Bakhtyâris by the imperial government in Tehran, and who was poisoned on the orders of prince Zill al-Sultân, the famous governor-general of Isfâhan, who feared his growing power. Šamsâm al-Saltana was Ilâk of the Bakhtyâris in 1903-5 and later Il-khân. He is remembered principally for the part he played as one of the leaders of the bakhtyâri movement in the constitutional movement in Persia.

The Constitutional Revolution [see dastur. iv] gave the Bakhtyâri khâns, particularly Šamsâm and his brother, Sardâr-i As'âd, the opportunity to transcend their traditional provincial roles and enter the national arena. Although Sardâr-i As'âd had been at
least partially converted to the constitutionalist cause, Şamsam appears to have been motivated largely by the desire to further his own personal and tribal interests.

During 1908 the Isfahâni constitutionalists attempted to enlist wider support, including that of the Bakhtiyârî, in their struggle against Ikhlâl al-Dawla, the new governor appointed by the reactionary Muhammad 'Alî Shâh [q. v.]. In January 1909 Şamsam, with a Bakhtiyârî force, occupied Isfahâh and assumed the duties of governor. He asked the Shâh to confirm him in this position but the Shâh refused. Şamsam convoked the provincial assembly and, on 3 May, telegraphed jointly with Sâdârî A'sâd to all the foreign legations warning of their intention to march on the capital to force on the Shâh the restoration of the constitutional régime. On July 13 Tehran fell to the Bakhtiyârî marching from the south and revolutionary forces led by Sipahdâr-i A'zâm advancing from Kâght, and the Shâh was deposed. Şamsam was appointed governor of Isfahâh.

In 1911, the news of the return of the ex-Shâh reached Tehran, Şamsam entered the cabinet of Sipahdâr as minister of war. The same day, 19 July, the Madjlis declared a state of siege and martial law, placing extraordinary powers in Şamsam's hands. He advocated the Madjlis putting a price on the head of the ex-Shâh and personally offered to assassinate him. On 26 July Şamsam formed a new cabinet, becoming prime minister while retaining the post of minister of war. He mobilised his Bakhtiyârî tribesmen to fight the forces of the ex-Shâh but the arrival of the Bakhtiyârî with their kâhns in Tehran and their exorbitant demands for money led to several resignations from Morgan Shuster, the American Treasurer-General. In August and September the Bakhtiyârî, with the help of the Armenian revolutionary Yûrîm Kâhn, defeated the supporters of Muhammad 'Alî. The hostility of Şamsam and his cabinet to Shuster's efforts to reform Persia's finances came to a head when the latter attempted to collect taxes from prince 'Alî al-Dawla. On 2 November Russia protested at Shuster's confiscation of the property of prince Shu'ayb al-Saltâna who, although having engaged in armed rebellion, was under Russian protection. Wuthûk al-Dawla, minister of foreign affairs in Şamsam's cabinet, apologised but Russia proceeded with its demands for the dismissal of Shuster. The Madjlis was inclined to resist but on 24 December Şamsam and his cabinet, with the regent Nasir al-Mulk, forced its dissolution and accepted the Russian demands. Şamsam remained prime minister until January 1913, when he resigned from the cabinet. In July 1913 Bakhtiyârî domination suffered a further setback when the newly-formed government gendarmerie expelled all armed Bakhtiyârî from Tehran.

In May 1918 Şamsam again formed a government. As a repercussion of events in Russia, this cabinet, which had a nationalist character, abrogated all treaties with Russia and all concessions granted to Russians. This measure, which affected the interests of foreigners in general, accelerated the fall of Şamsam's cabinet and its replacement by that of Wuthûk al-Dawla, which signed the Anglo-Persian agreement of 9 August 1919. In the summer of 1921 Şamsam was appointed governor-general of Khurâsân to replace the military governor-general, Colonel Muhammad Taki Kâhn Pasyân, but was prevented from taking up his post by Pasyân's resistance. Şamsam died in 1930 while on a mission to mediate between the central government and rebellious Bakhtiyârî tribes.
Khuzai, who was accused of having conspired against the caliph and of having maintained that the Kur’an was not created, contrary to the view laid down by al-Farazdaq (Nakhd’i, 305) and by ‘Amr b. Ma’dikkarib himself (Hamasa of al-Buhurt, 83, ed. Cheikhho, no. 237; Amadi of al-Kali, ii, 154, 10, as well as by Muslim b. al-Walid (ed. De Goeje, vi, 18) in a verse which Schwarzlose (see Bibl.) wrongly thought to refer to ‘Amr’s sword, while the weapon given by Harun al-Rasid to his general Yazid b. Mazyad referred to in the verse is the sword of the Prophet, Dhu ‘l-Faqar [q. v.], as is evident from verse 25 of the same poem and the note by Ibn Khallikan (ed. Ihsan ‘Abbás, v, 329, tr. de Slane, 220).

(G. LEVI DELLA VIDA)
ever, claim that Samsun was at one point occupied by the Cossacks and the fortifications seriously damaged; but by the time of his visit, the latter had been repaired.

The Dzhahan-nâma, a 11th/17th-century geographical text, contains some information on Samsun, which was probably put together not by the author Kâbit Čelebi himself but by one of his collaborators. The geographer comments on the non-nucleated settlements of the Black Sea coast and the rustic character of the inhabitants. In his time, the castle of Samsun had fallen in ruins, but the town possessed one or more shops, a mosque and a bath house. In actual fact, late 11th/17th century Samsun possessed at least four mosques: two of them went back to the Ilkhânid period, the mesjidi of ʻÎsâ Bâbâ dated from the 9th/13th century, while the Hadydi Khâtûn mosque had been founded in 1105-6/1694. Tournefort, who passed through Samsun in 1112-13/1701, did not observe any signs of commercial activity such as shops, government house, or the like. By the middle of the 13th/19th century, a pleasant impression on the Prussian general Helmuth von Moltke, who in 1253-4/1838 disembarked from a steamer and began his Anatolian travels in Samsun; but although he must have spent some time in the town and even made a map of it, he does not say anything specific about buildings or people. Henry Suter, who visited Samsun in the very same year, thought that the town had a population of 450 Turkish and 150 Greek families. This traveller commented on Samsun’s well-stocked bazaars, but believed them to serve the transit trade rather than local consumption. In this period, the port did not possess a quay, and afforded only limited protection in case of storms. Yet Moltke observed that a considerable amount of trade was conducted through the port, and other European travellers of the time agreed with him. Many visitors were Persian and other merchants crossing the Black Sea on Austrian steamers in order to trade in Rumelia and central Europe. A.D. Mordtmann, who visited Samsun in 1266-7/1850, also made some acerbic comments on the lack of port facilities.

In an account of Asia Minor published in 1278-9/1862, Charles Texier adds a few details to this description. By the middle of the 13th/19th century, a governor had built a government house in the town, in which antique columns and other finds from the ruins of the ancient city had been incorporated. The town by mid-century boasted a covered market, a khân, a public bath and four saints’ graves. The quarters inhabited by Greeks and Armenians were located some distance away from the Muslim town; they both possessed a mosque and a bath. Yet in terms of population, the town remained quite small; the Ottoman traveller Ferrukhan Beg, who visited Samsun in 1265/1847 and onwards have been made to bridge the gap, which included the Black Sea port in Ottoman ports.

Balar, La Romanie génoise (XIIIe-début du XVe siècle), Rome 1874, ix, 373, 382; ibid. 1894, ii, 130, 131. 'Alim, star 'Alí, 1284, 285-90, 341, 342; Aqtab al-'Alí, 1122/1710 became ca. 1122/1710 became available for study. This is a map of the world centred on Mecca, so conceived that for any locality between Spain and China the direction and distance of Mecca are given correctly within the limits of mediaeval geographical coordinates (see Pl. LXVI). The maker and engraver were on the grounds of the distinctive calligraphy—most probably ‘Abd al-'Ali and his brother Muhammad Bakir, who made for Shah Husayn in 1124/1712-13 the splendid astrolabe now in the British Museum. The grid serves both functions admirably for places between the Maghrib and Sind, but because the latitude curves are drawn as arcs of circles slight errors occur for localities in al-Andalus in the west and India and China in the east. This remarkable object escaped notice in the articles KIBLA. ii and MAKKA. iv. It is a mathematical device or a cartographic projection or a nomogram, depending on how one defines either expression, which enables the user to lay the non-uniform scale of a diametrical rule over a given locality and then simply read off the kibla on the outer scale and the distance to Mecca above or below it. This operation can be easily demonstrated (see Pl. LXVII).

The positions of the ca. 150 localities are related to the coordinates in a set of geographical tables derived from a mysterious Kitāb al-Aṣl wal wa‘l-urdụl fi'l-Furs, which seems to go back at least to the 5th/11th century, with certain positions modified from later zīḏān in the same tradition as the Zīḏī-i Khānānī of Nasir al-Dīn al-Tūsī [q.v.] and the Zīḏī-i Sūdāntī of Uluğ Beg [q.v.].

Now the mathematics underlying the principle of the grid, which is not trivial, was known already in the 3rd/9th and 4th/10th centuries, and in fact the instrument reflects a genius and innovative spirit such as was typical of those centuries rather than the Safavid period. Yet not a trace of a mention of such a device or such a Mecca-centred map has been found in Islamic literature. However, there is indeed evidence that such maps were available in previous centuries. In al-Zīḏī al-ṣaltūnī (Ibn ‘Abd al-Sālih) ca. 750/1350 [q.v.] there is a geographical table with longitudes, latitudes and kibla-values for about 240 localities (ms. Oxford Seld. A30). The kibla-values, which are given to the nearest 1°, do not correspond to recomputation by any of the known exact or approximate methods used by the Muslim astronomers. The fact that they were read from a Mecca-centred
rectazimuthal map of the same kind as the Isfahan piece is confirmed by the kiblas for localities in the western and east. But it was not Ibn al-Shāṭīr who determined the kibla-values. A similar table with entries for about 245 localities is found in the Zījd al-ṣanajari of Sandjar-i Kamālī, also known as Sayyīd Munadjīdīm (fl. Yazd, ca. 710/1310) (ms. Paris B.N. supp. pers. 1488). Both tables stem from a common source, see also Ibn al-Sanajārī of Abu 'l-Fath al-Khazīnī (fl. Marw ca. 515/1120) (q.v.). In one of the three available mss. of this work (B.L. Or. 6669) there is a substantial fragment of the same table (one complete folio is missing). It appears that al-Bīrūnī had access to a Mecca-centred map on which the kibla-values, estimated from the map, were indicated alongside the place names. He himself estimated the longitudes and latitudes and copied the kibla-values. Now the coordinates are essentially those of al-Bīrūnī (q.v.). The fact that al-Khāzīnī obtained his data from a map is proven by the occasional differences in the longitudes and latitudes, particularly in the minutes. If they can be corrected. tazimuthal projections by cartographers, including Montucla, I. Craig and E. von Hammer, are mentioned by Schoy. (D.A. King)

**SAMUEL** [see USHMU'IL].

**SAMŪM (A.),** yielding Fr. simoun and Eng. simoom, a hot wind of the desert accompanied by whirlwinds of dust and sand, and set in motion by moving depressions which form within the trade winds or calm zones of the high, subtropical depressions. This wind is especially characteristic of the Sahara, in Egypt, in Arabia and in Mesopotamia. The word occurs in three passages of the Kur'ān, where it is, however, not especially applied to the wind. In sūra XV, 27, it is said that the Dānn were created from the fire of Samūm. In LII, 27, the punishment of the Samūm is mentioned; and according to I, 41, the “people of the left” were dwelling in Samūm wa-Hamīm.

The Hadīth uses the word in the same sense; yet the meaning “hot wind” is here coming to the front. It is said that Hell takes breath two times a year: “its taking breath in summer is Samūm” (al-Tirmidhl. Ḫaṭṭānām, bāb 9; cf. Ibn Mādja, Ṣuḥd, bāb 38). In al-Bukhārī we find reference to the opinion that the hot air during the day is called ḥārūr, whereas it is called samūm at night (Badd al-ḥaṣāl, bāb 4).

In nearly every traveller’s account the samūm is mentioned in the sense of the suffocating wind, often called simoom. From the innumerable references, a few may be picked out. C.M. Doughty mentions it in the neighbourhood of Mada’in Sālih as “a dry southern wind” against which the Bedouins “covered their faces up, to the eyes, with a lap of the kerchief”. He again mentions it between Medina and Mecca and tells us that, according to the Bedouins, weak camels may be suffocated by it (Travels in Arabia Deserta, Cambridge 1888, i, 106, 188).

In Mecca, the north, north-east and east winds are called samūm. When it blows it makes the impression as if it came from a huge fire through the intermediacy of gigantic bellows (Snouck Hurgronje, *Mekkanische Sprechwörter und Redensarten*, no. 76). The season in which the sun enters the constellation of the Virgin (August) has an extremely bad reputation in Mecca, because in this time kōm and samūm and zayāb, blow alternately (loc. cit.).

Concerning Egypt, Lane says (Manners and customs, Introduction): “Egypt is also subject particularly during spring and summer, to the hot wind called the ‘‘Simoom’’, which is still more oppressive than the khamāṣeen winds, but of much shorter duration, seldom lasting longer than a quarter of an hour or twenty minutes. It generally proceeds from the south-east, and carries with it clouds of dust and sands”.

Concerning Kašr-i Šīrin [q.v.], Hamd Allāh Mustawfi (Nuzhat al-kulūb, tr. Le Strange, 50) says: “Its climate is unwholesome, for in the hot season at most times the (hot) Simum blows”.

Al-Mas‘ūdī, Murūji al-dhahab, iii, 320-1 = § 1204 has a legendary report concerning the ḍānn which, according to the verse from the Kur’ān mentioned above, were created from the fire of the samūm (tr. R. Basset, *Mille et un contes, récits et légendes arabes*, Paris 1924; i, 57); see also A. Musil, *Reisen in Arabia Petraea*, Vienna 1907-8, iii, 3-34. In other parts of the Islamic world, other words are used for the samūm. In Europe, for instance, one finds the term sirocco.

The word is hardly used in North Africa, where the hot wind is called, after its direction of origin, and according to the various regions, keblī or šārkhī.

An extract from the geographical table in the Arabic recension of the Zid-i Ilkhání by Shihâb al-Dîn al-Halâbî. The azimuths of the kiblah are given to the nearest 10° alongside the longitudes and latitudes of cities. Only in 1994 was it discovered that these kibla-values were read from a Mecca-centred world map. (From ms. Cairo Tal'at miḥāl 226/1, courtesy of the Egyptian National Library).

A table from medieval Cairo promising the altitude of the sun when it is in the direction of (the closed back of) the ventilator (bâdhâhandj [see bâdâî]). Since the altitude at the winter solstice is zero, this means that the ventilators in Old Cairo were oriented with their openings facing perpendicular to the direction of winter sunrise (or about 27° E. of N.). This table led to the discovery that the entire medieval city is astronomically aligned (see further, JAOS, civ [1983], 97-133).
There are two sets of curves in the solar quadrant on the upper right of the back of this astrolabe by Muhammad Mukīm al-Yazdī (ca. 1060/1650). The set whose curves are not equally spaced enables the user to find, using the horizontal ecliptic scale, the altitude of the sun when it is in the kibla of various cities in 'Irāq and Persia. For a given day of the year, one finds the solar longitude, moves along the corresponding circular arc with the alidade up to the curve in question and reads off the solar altitude on the outer scale. One then observes the sun until it reaches that altitude, and then one is facing the kibla. The other set of curves, which are equally spaced, enables the user to determine, using the vertical ecliptic scale, the solar altitude at midday for a series of latitudes from 27° to 53° in 2°-steps.
